**Biomedical Aspects of Manual Wheelchair Propulsion** L. H. V. van der Woude,Maria T. E. Hopman,Cathelijne H. Kemenade,1999 Mobility is fundamental to health, social integration and individual well-being of the human being. Henceforth, mobility must be viewed as being essential to the outcome of the rehabilitation process of wheelchair dependent persons and to the successful (re-)integration into society and to a productive and active life. Many lower limb disabled subjects depend upon a wheelchair for their mobility. Estimated numbers for the Netherlands, Europe and USA are respectively 80.000, 2,5 million and 1,25 million wheelchair dependent individuals. Groups large enough to allow a special research focus and conference activity. Both the quality of the wheelchair, the individual work capacity, the functionality of the wheelchair/user combination, and the effectiveness of the rehabilitation programme do indeed determine the freedom of mobility. Their optimization is highly dependent upon a continuous and high quality research effort, in combination with regular discussion and dissemination with practitioners. The book intends to give a state of the art view on the current fundamental, clinical and applied research findings and their consequences upon wheelchair propulsion, arm work, wheelchair training and possible

consequences of a wheelchair confined life style. Also its implications for rehabilitation, as well as alternative modes of ambulation and activity in the wheelchair confined population, such as functional electrical stimulation and its possible future developments, are dealt with.

**I Know Someone who Uses a Wheelchair** Sue Barraclough,2011-01-01 Introduces readers to wheelchairs, how using a wheelchair affects people, and how to be a good friend to someone who uses a wheelchair.

**Seven Wheelchairs** Gary Presley,2008-04 In 1959, seventeen-year-old Gary Presley was standing in line, wearing his favorite cowboy boots and waiting for his final inoculation of Salk vaccine. Seven days later, a bad headache caused him to skip basketball practice, tell his dad that he was too ill to feed the calves, and walk from barn to bed with shaky, dizzying steps. He never walked again. By the next day, burning with the fever of polio, he was fastened into the claustrophobic cocoon of the iron lung that would be his home for the next three months. Set among the hardscrabble world of the Missouri Ozarks, sizzling with sarcasm and acerbic wit, his memoir tells the story of his journey from the iron lung to life in a wheelchair. Presley is no wheelchair hero, no inspiring figure preaching patience and gratitude. An army brat turned farm kid, newly arrived in a conservative rural community, he was immobilized before he could take the next step toward adulthood. Prevented, literally, from taking that next step, he became cranky and crabby, anxious and alienated, a rolling responsibility crippled not just by polio but by anger and depression, “a crip all over, starting with the brain.” Slowly, however, despite the limitations of navigating in a world before the Americans with Disabilities Act, he builds an independent life. Now, almost fifty years later, having worn out wheelchair after wheelchair, survived post-polio syndrome, and married the woman of his dreams, Gary has redefined himself as Gimp, more ready to act out than to speak up, ironic, perceptive, still cranky and intolerant but more accepting, more able to find joy in his family and his newfound religion. Despite the fact that he detests pity, can spot condescension from miles away, and refuses to play the role of noble victim, he writes in a way that elicits sympathy and understanding and laughter. By giving his readers the unromantic truth about life in a wheelchair, he escapes stereotypes about people with disabilities and moves toward a place where every individual is irreplaceable.
