**Strength of Materials** D.S. Bedi, The sixth edition of the book has thoroughly been modified and enlarged to meet the revised syllabi of many universities and other professional examination like AMIE and above all to incorporate the suggestions received from the students and faculty alike. Additional problems on two-dimensional complex stress systems have been fully solved by both analytical and Mohr's circle method so that the readers are made aware of the fact that the sign shear stress on a particular plane has its one important role to play so as to arrive at the correct result which otherwise is normally overlooked or even sometimes neglected. The term bending Moment and twisting Moment have been introduced as vector quantities in order to bring out the difference between them so that the reader can easily decipher each of them and proceed ahead to accomplish the associated objectives. The chapter on Thick Cylinders had been re-written to keep uniformity in sign convention of the stresses throughout the entire text. Further in this chapter the process of autofrettage of a thick cylinder has been introduced along with the Simplified theory of this process. The author has endeavored to familiarize the readers with the Yield point phenomenon of low carbon steel. Quantitative definitions of ductility and malleability and Poisson's Ratio which were hitherto not dealt with in most of the text on the subject. On the specific demand of the students almost all the chapters have been supplemented with objective type questions along with more number of worked examples.

**Solution-Focused Applied Psychology** Louis Cauffman, Mathieu

Weggeman, 2023-09-15 This book presents a research-based solution-focused applied psychology approach (SoFAP-P) that is efficient and effective in helping clients address challenges and can be applied to a wide range of psychological domains. Lessons learned from preceding psychological models, including psychoanalysis, behavioral therapy, humanistic psychology, family systems therapy and the pioneering contributions of Milton Erickson and the groundbreaking solution-focused therapy of Steve de Shazer and Insoo Kim Berg, culminate in this innovative SoFAP-P approach. Based on a thorough analysis of many solution-focused case studies, this tested and validated scientifically based protocol can be used as a learning guide to better understand the SoFAP-P, as well as the innovative qualitative methodology used to validate it. Cauffman and Weggeman show how this design science research (DSR) methodology is used to design, test and validate a generic set of actions that yield interventions to effectively apply to solution-focused client cases. The book demonstrates the importance of SoFAP-P to both psychological science and society and offers a glimpse into its growing potential as an intervention model. Those interested in the field of DSR will benefit from the overview of one of the first applications of DSR methodology in the psychological sciences, as well as students and academics in applied psychology.

**Synthesis and Control of Discrete Event Systems** Benoît Caillaud, Philippe

Darondeau, Luciano Lavagno, Xiaolan Xie, 2013-04-17 This book aims at providing a view of the current trends in the development of research on Synthesis and Control of Discrete Event Systems. Papers collected in this volume are based on a selection of talks given in June and July 2001 at two independent meetings: the Workshop on Synthesis of Concurrent Systems, held in Newcastle upon Tyne as a satellite event of ICATPN/ICACSD and organized by Ph. Darondeau and L. Lavagno, and the Symposium on the Supervisory Control of Discrete Event Systems (SCODES), held in Paris as a satellite event of CAV and organized by B. Caillaud and X. Xie. Synthesis is a generic term that covers all procedures aiming to construct from specifications given as input objects matching these specifications. Theories and applications of synthesis have been studied and developed

for long in connection with logics, programming, automata, discrete event systems, and hardware circuits. Logics and programming are outside the scope of this book, whose focus is on Discrete Event Systems and Supervisory Control. The stress today in this field is on a better applicability of theories and algorithms to practical systems design. Coping with decentralization or distribution and caring for an efficient realization of the synthesized systems or controllers are of the utmost importance in areas so diverse as the supervision of embedded or manufacturing systems, or the implementation of protocols in software or in hardware.

**NETWORKING 2010** Mark Crovella, Laura Marie Feeney, Dan Rubenstein, S.V. Raghavan, 2010-04-26 This book constitutes the refereed proceedings of the 9th IFIP-TC6 Networking Conference, Networking 2010. Papers were solicited in three broad topic areas: applications and services, network technologies, and internet design. All papers were considered on their merits by a unified Technical Program Committee (TPC); there was no attempt to enforce a quota among topic areas. We believe the resulting program is an excellent representation of the breadth of recent advances in networking research. This year, the conference received 101 full paper submissions from 23 countries on 6 continents, reflecting a strong diversity in the networking community. Similarly, the 92 members of the TPC are from 21 countries and include a mix of academic, industry, and governmental affiliations. The TPC members, aided by some 50 external reviewers, provided a total of 470 reviews and follow-up discussions totaling more than 200 messages. The final selections were made at a TPC meeting hosted by Columbia University in New York City, with both in-person and remote participation. In total, authors of accepted papers have academic and industry affiliations in 15 countries. We finally selected 24 papers for presentation during the conference technical sessions. A small number of papers were assigned a shepherd from the TPC to assist in paper revision. These statistics represent an acceptance rate of just under 24%, comparable to that of previous years. The TPC also identified several papers that reflect particularly promising early results; these papers were selected for presentation as work-in-progress papers and are identified as such in the proceedings.

**Structural Analysis-II, 4th Edition** S.S. Bhavikatti, Structural analysis, or the 'theory of structures', is an important subject for civil engineering students who are required to analyse and design structures. It is a vast field and is largely taught at the undergraduate level. A few topics like matrix method and plastic analysis are also taught at the postgraduate level and in Structural Engineering electives. The entire course has been covered in two volumes—Structural Analysis-I and II. Structural Analysis-II deals in depth with the analysis of indeterminate structures, and also special topics like curved beams and unsymmetrical bending. It provides an introduction to advanced methods of analysis, namely, matrix method and plastic analysis. **A Berichtigungsliste of Demotic Documents: Papyrus editions** A. A. den Brinker, Brian Paul Muhs, S. P. Vleeming, 2005 There seems to be no brief English equivalent for the concept of a +Berichtigungsliste; . This demotic +Berichtigungsliste; collects and critically presents corrections and supplements to editions of demotic documentary texts: papyri, ostraka, inscriptions, mummy labels, graffiti - everything demotic that was not clearly written as a secular or religious literary composition. We have added all the information we have found concerning inventory numbers and photographs as well as republications of the texts in question which the scholar working with these texts might like to have. Although the +Berichtigungsliste; chiefly concerns text editions, be they published in monographs or articles, texts that have been published only in photography or facsimile are also included. The period covered for the publications that have been ransacked for the purpose of our +Berichtigungsliste; is roughly the Twentieth Century: 1900-2000. In subsequent volumes, we intend to extend this time-range into the Nineteenth Century as well as into the future.

Getting the Climate Science Facts Right Medani P. Bhandari, 2022-09-01 Getting the Climate Science Facts Right - discusses climate change science with reference to the Intergovernmental Panel on Climate Change (IPCC). Addressing climate change is the most important public priority of the 21st Century. Unlike many issues, however, this issue

is being driven by both science and its interface with politics. The main institution for bridging this division between science and international politics is the IPCC. As such it is the main source of the facts from which climate change policy is developed. This book describes the ways in which the IPCC arrives at these facts and so can be sure they are complete and evidence based. Seldom in history has science had such a direct relationship with politics. The negotiation of an international policy regime requires, at its outset, an agreement on the facts. In this case, the facts are scientific, complex and contentious. Governments have recognized this and have, by using the IPCC, set up institutional machinery to provide facts from a source and in a manner that they can accept. The way in which the IPCC functions is unique in that it melds the way in which science achieves consensus with the way governments do at the international level. Starting with a process to examine, review and debate scientific findings leading to a consensus about scientific fact, usually expressed as probabilities that the findings will hold over time, the IPCC then concludes by using the kind of consensus-development mechanism that the United Nations typically uses to achieve agreements leading to the formation of policy regimes. The book examines the structure of the IPCC, its composition and its procedures in order to achieve an understanding of its role and future.
