*Studying Atomic Dynamics with Coherent X-rays* Michael Leitner, 2012-01-05 Diffusion in solids at moderate temperatures is a well-known phenomenon. However, direct experimental evidence about the responsible atomic-scale mechanisms has been scarce, due to difficulties in probing the relevant length- and time-scales. The present thesis deals with the application of X-ray Photon Correlation Spectroscopy (XPCS) for answering such questions. This is an established method for the study of slow dynamics on length-scales of a few nanometres. The scattered intensity in the diffuse regime, i.e. corresponding to atomic distances, is very low, however, and so it has so far been considered impossible to use XPCS for this problem. Threefold progress is reported in this work: It proposes a number of systems selected for high diffuse intensity, it optimizes the photon detection and data evaluation procedures, and it establishes theoretical models for interpreting the results. Together these advances allowed the first successful atomic-scale XPCS experiment, which elucidated the role of preferred configurations for atomic jumps in a copper-gold alloy. The growth in available coherent X-ray intensity together with next-generation X-ray sources will open up a wide field of application for this new method.

**Lewin's GENES X** Jocelyn E. Krebs, Elliott S. Goldstein, Stephen T. Kilpatrick, 2009-11-27 The fields of molecular biology and molecular genetics is rapidly changing with new data acquired daily and new insights into well-studied processes presented on a scale of weeks or months rather than years. For decades Lewin's GENES has provided the teaching community with the most cutting edge presentation of molecular biology and molecular genetics, covering gene structure, sequencing, organization, and expression. The latest edition, with a knowledgeable new author team, has enlisted 21 scientists to provide revisions and content updates in their individual fields of expertise, ensuring that Lewin's GENES X is the most current and comprehensive text in the field. Informative new chapters, as well as a reorganization of material, provide a more logical flow of topics and many chapters have been renamed to better indicate their contents. Lewin's GENES X also contains new pedagogical features to help students learn as they read and an online student study guide allows students to test themselves on key material.

**Black X** Tendayi Sithole, 2024-02 What does it mean to be Black in an anti-Black world? In *Black X: Liberatory Thought in Azania*, Tendayi Sithole offers

a compelling example of how to engage South Africa differently. Set in the Black point of view as a site of critical reflection, he confronts the question of colonial conquest, social cohesion and justice. Since South Africa is a name given to the country by its conquerors, not by its indigenous inhabitants, for true liberation, a renaming needs to occur. The concept of Azania holds this emancipatory gesture. The post conquest, post 1994 liberal narratives mute the prevalence of racism while valorizing non-racialism and the transcendence of race. To indicate this silencing, the book deploys the concept of X, both as a signifier of repression and dehumanization of the Black subject, and as an empty signifier that holds the opportunity for radical and compassionate rehumanization. The book examines these strands of erasure and hope for the Black subject. Sithole scrutinizes the colonial contract, arguing that it is not a contract since there has never been an agreement between the indigenous people and the settler colonialists. This brings into focus the land question, specifically land dispossession and its existential connection to black life. The relevance of Black Consciousness to the Azanian existential tradition is based on Steve Biko's case that Marxism ignores Black ontological misery through its valorization of class and failure to include anti-Black racism in its analysis of power. Finally, Sithole analyses Mabogo P. More's philosophical meditations around what it means to be Black in an anti-Black world. In erasing the idea of South Africa and inscribing an open-ended naming of X, the book opens the way for something new to take its place that is imbued with greater humanity. This gesture opens up the potential to think about liberation in this country that is yet to rename and redefine itself.

**Transactions on Computational Systems Biology X** Corrado Priami, Falko Dressler, Ozgur Akan, Alioune Ngom, 2008-12-18 Technology is taking us to a world where myriads of heavily networked devices interact with the physical world in multiple ways, and at many levels, from the global Internet down to micro and nano devices. Many of these devices are highly mobile and autonomous and must adapt to the surrounding environment in a totally unsupervised way. A fundamental research challenge is the design of robust decentralized computing systems that are capable of operating in changing environments and with noisy input, and yet exhibit the desired behavior and response time, under constraints such as energy consumption, size, and processing power. These systems should be able to adapt and learn how to react to unforeseen scenarios as well as to display properties comparable to social entities. The observation of nature has brought us many great and unforeseen concepts. Biological systems are able to handle many of these challenges with an elegance and efficiency far beyond current human artifacts. Based on this observation, bio-inspired approaches have been proposed as a means of handling the complexity of such systems. The goal is to obtain methods to engineer technical systems, which are of a stability and efficiency comparable to those found in biological entities. This Special Issue on Biological and Biologically-inspired Communication contains the best papers from the Second International Conference on Bio-Inspired Models of Network, Information, and Computing Systems (BIONET-ICS 2007). The BIONETICS conference aims to bring together researchers and scientists from several disciplines in computer science and engineering where bio-inspired methods are investigated, as well as from bioinformatics, to deepen the information exchange and

collaboration among the different communities.

**A Century of X-Rays and Radioactivity in Medicine** R.F Mould, 2018-02-06 A Century of X-Rays and Radioactivity in Medicine: With Emphasis on Photographic Records of the Early Years celebrates three great discoveries-x-rays (1895), radioactivity (1896), and radium (1898)-and recalls the pioneering achievements that founded the new science of radiology and changed the face of medicine forever. Over 700 historical illustrations with full and informative captions are supported by short introductory essays to illuminate the fascinating radiological past in an easy-to-read style. The focus of this book is on the historically more interesting early years of discovery, invention, diagnosis, therapy, dosimetry, risk, and protection. Interspersed with a variety of radiological anecdotes, the photographic record is complemented by archival accounts of the pioneer scientists and physicians and their early patients. In the chapters on diagnostic techniques, radiotherapy, and nuclear medicine, the author contrasts old methods with

newer technologies. He also includes two fascinating chapters on museum and industrial applications of radiography. The book is comprehensively indexed for easy retrieval of the wide variety of people, techniques, apparatus, and examples featured throughout this radiological journey.
