*Grumman XF5F-1 & XP-50 Skyrocket* David Lucabaugh, Bob Martin, 1995-05-01 All of the comic book reading public during the 1940's followed the adventures of Blackhawk and his mighty men as they conquered the world of evil. Those of us with a mind bent toward things aeronautical knew that it was not Superman or Batman who held the keys to a crime-free society, bring on Blackhawk. Dressed in daring dark uniforms, the dashing figures of this 1940's version of the A-Team were mounted on the very latest of aircraft. Through the paint brush the artist portrayed an entire squadron of snub-nosed twin engine fighters which those of us old enough to remember know that only a single actual aircraft existed for the artist to illustrate, the Grumman XF5F-1 Skyrocket.

**United States Naval Aviation, 1919-1941** E.R. Johnson, 2011-04-29 Within six months of the devastating attack on Pearl Harbor, the U.S. Navy had checked the Japanese military advance in the Pacific to the extent that the United States could return to its original "Defeat Germany First" strategy. That the Navy was able to accomplish this feat with only six fleet aircraft carriers and little more than 1,000 combat aircraft was not sheer luck but the culmination of more than two decades of determined preparation. This thorough study, with detailed drawings and photographs, explains and illustrates the trial and error process which went into developing the aircraft, airships and ships of the interwar period. The critical factors that shaped Naval Aviation after World War I—naval treaties, fleet tactics, government programs, leadership and organization, as well as the emergence of Marine Corps and Coast Guard aviation—are discussed in depth.

**365 Aircraft You Must Fly** Robert F. Dorr, 2015-05-01 A fascinating, entertaining, and amusing plane-by-plane journey through aviation history. Aviation has come a long way since the Wright Brothers built their glider in Kitty Hawk, North Carolina, in 1903. From among the thousands of different types of military and commercial aircraft constructed over the past 100 years, aviation expert Robert F. Dorr profiles the most important, fascinating, and famous aircraft ever made. Your opinions might differ, but you wouldn't want to miss out on the planes Dorr identifies as flights of a lifetime. The book covers 365 of the most iconic aircraft in world history that enthusiasts, serious-minded hobbyists, and casual fans would love to fly if given the chance. Clear photography, historical context, and specs get you as close as possible to these planes without setting foot in a hangar. While covering every era of aviation history, many of the planes in 365 Aircraft You Must Fly were flown during World War II, a time unmatched in aviation for its technological advances, romance, and clarity of purpose. During this golden age of flying, propellers gave way to jet engines, and the Greatest Generation fought gallantly in them. Explore the history, thrills, and joy of flying the world's most amazing 365 aircraft.

*A Flight Investigation of the Thermal Performance of an Air-heated Propeller* John F. Darsow, James Selna, 1947 The thermal performance of an air-heated propeller, installed on a test airplane, was evaluated by observations of the ice-prevention properties of the propeller during flight in natural-icing conditions and by the collection of thermal data on the propeller during flight in clear air and in clouds at temperatures above freezing. The test propeller was equipped with hollow steel blades of a standard design which were altered to permit heated air to enter the blade cavities at the

propeller hub and to leave the cavities at the blade tips. No provisions were made to control the distribution of air flow inside the blades.

**The Men Who Flew the Vought F4U Corsair** Martin W. Bowman, 2021-09-01 First flown in 1940, the prototype Vought F4U Corsair instantly became the fastest fighter in the world and the fastest US aircraft of any description. Powered by a huge 18-cylinder Pratt and Whitney Double Wasp engine driving an enormous 13 feet 4 inch propeller, the first Corsairs were capable of 417mph. This figure would rise to nearly 450mph in later versions despite the fact that fuel load and overall weight was increased. Production began in 1941, not only by Vought but also by Goodyear and Brewster. The F4U entered service with the US Navy in September 1942, although carrier-borne operations were initiated a little later not by the Americans but by the British Fleet Air Arm. The aircraft subsequently came to be extensively used from land and sea by the US Marines, Royal Navy, and Royal New Zealand Air Force. Famous squadrons like VMF-214 'The Black Sheep' and VF-17 'Jolly Rogers', along with many others, maintained total ascendancy over the Japanese for the rest of the war - a remarkable achievement for a single type. After the Second World War, the Corsair stayed in production and was used with distinction by the French in Indo-China and again by the US Navy in Korea. Since then, Corsairs have achieved significant success in air races and more and more are being restored to fly for museums and warbird enthusiasts the world over. Martin Bowman's comprehensive new book combines technical information and detailed development history with a fascinating combat history told, in many cases, by the Second World War pilots themselves. Well researched, readable, and illustrated with dozens of rare and previously unpublished photographs, *The Men Who Flew the Vought F4U Corsair* is the perfect book for any fan of the 'bent wing bird'.

*BuNos! Disposition of World War II USN, USMC and USCG Aircraft Listed by Bureau Number* Douglas E. Campbell, 2012-02-01 A snapshot in time. After thousands of hours of research and data entry over a 35-year period, the information on the disposition of some 25,000 US Navy, US Marine Corps and US Coast Guard aircraft needs to be published. These aircraft mainly represent those built and lost during World War II - between 7 December 1941 and 15 August 1945 - but this book also contains aircraft built before WWII that were lost during WWII or disposed of after WWII (lost during the Korean War, lost on training exercises, sold to private investors, currently located in museums and even some still proudly sitting as gate guards across the US, etc.).

Harnessing the Sky Frederick Trapnell, Dana Trapnell Tibbitts, 2015-07-15 *Harnessing the Sky* is one of the last untold stories in 100 years of naval aviation. This biography of Vice Adm. Frederick M. Trapnell explores the legacy of the man who has been called "the godfather of current naval

aviation." A pilot of calculated courage, "Trap" entered the Navy when test pilots were more like stuntmen than engineers. Airplanes had not yet come into their own as weapons of war, and they had an undeveloped role in the fleet. His vision and leadership shaped the evolution of naval aviation through its formative years and beyond. When the threat of war in 1940 raised an alarm over the Navy's deficiency in aircraft—especially fighters—Trap was appointed to lead the Flight Test Section to direct the development of all new Navy airplanes. He played a key role in expediting the evolution of the two superb fighters that came to dominate the air war against Japan—the Corsair and Hellcat. After World War II, Trap returned as commander of the Naval Air Test Center to lead the Navy through the challenges of transitioning to jets. Trap was not only the first U.S. Navy pilot to fly a jet, but is also recognized for defining the operating requirements for carrier-based jet propelled aircraft. Over the course of two decades, Trap tested virtually every naval aircraft prototype and pioneered the philosophy and the methods of the engineering test pilot. He demanded comprehensive testing of each airplane in conditions and maneuvers it would face in wartime fleet operations. These innovations kept the Navy at the forefront of modern aviation, and stand as an enduring legacy to the man who is regarded as the foremost test pilot in a century of naval aviation.
