Book XIII of Ovid's >Metamorphoses Luis Rivero García,2018-11-05 The text of Ovid's Metamorphoses is not as indisputably established as one might think. Many passages are still obscure or plainly corrupt. 550 manuscripts, 500 editions and reprints, as well as countless critical notes and works must be taken into account when trying to establish the most reliable text for new generations of readers. This volume provides a detailed line-by-line analysis of Book XIII and offers thereby an indispensable starting point for a new critical edition not only of this but also of other parts of the poem.

Lasers in the Conservation of Artworks XIII Salvatore Siano,Daniele Ciofini,2023-11-03 Light allows us not only to see the works of art, but also to take care of them and preserve them for future generations, through diagnosis of the degradation and deterioration phenomena, conservation treatments, and monitoring based on light-material interaction processes. Recent progress on this subject was discussed during the 13th International Conference on Lasers in the Conservation of Artworks (LACONA XIII, Florence, Italy, 12-16 September 2022). This volume includes selected contributions presented at the conference on preservation topics, photonic techniques, and optimization methods. In particular, the papers focus on the development and use of innovative spectroscopic and imaging characterization techniques, the diagnostic knowledge of important artworks, and the optimization of the laser solution for preserving a growing variety of cultural assets, such as stone and metal artefacts, painted surfaces, textile, feather, and plastic artefacts. Lasers in the Conservation of Artworks XIII aims at scholars and operators of the community of preservation of cultural heritage, at teachers and students of training courses on diagnostic and conservation methods, applied physics, and chemistry, as well as archaeology and art history.

Music and Power at the Court of Louis XIII Peter Bennett,2021-05-27 What role did sacred music play in mediating Louis XIII's grip on power in the early seventeenth century? How can a study of music as 'sounding liturgy' contribute to the wider discourse on absolutism and 'the arts' in early modern France? Taking the scholarship of the so-called 'ceremonialists' as a point of departure, Peter Bennett engages with Weber's seminal formulation of power to consider the contexts in which liturgy, music and ceremonial legitimated the power of a king almost continuously engaged in religious conflict. Numerous musical settings show that David, the psalmist, musician, king and agent of the Holy Spirit, provided the most enduring model of kingship; but in the final decade of his life, as Louis dedicated the Kingdom to the Virgin Mary, the model of 'Christ the King' became even more potent – a model reflected in a flowering of musical publication and famous paintings by Vouet and Champaigne.

Water Pollution XIII C.A. Brebbia,2016-08-19 Water Pollution XIII is the proceedings of the 13th International Conference in the series of Modelling, Monitoring and Management of Water Pollution. The conference, which has always been very successful, provided a forum for discussion amongst scientists, managers and academics from different areas of water contamination. Their papers, included in this book, provide a wealth of information which will be of great benefit to all those involved with water pollution problems. The environmental problems caused by the increase of pollutant loads discharged into natural water bodies requires the formation of a framework for regulation and control. This framework needs to be based on scientific results that relate pollutant discharge with changes in water quality. The results of these studies allow industry to apply more efficient methods of controlling and treating waste loads, and water authorities to enforce appropriate regulations regarding this matter. Environmental problems are essentially interdisciplinary. Engineers and scientists working in this field must be familiar with a wide range of issues, including the physical processes of mixing and dilution, chemical and biological processes, mathematical modelling, data acquisition and measurement, to name but a few. In view of the scarcity of available data, it is important that experiences are shared on an international basis. Thus, a continuous exchange of information between scientists from different countries is essential. Topics covered include: Monitoring, modelling and forecasting; Freshwater quality; Marine water quality; Groundwater and aquifer issues; Water management; Remediation; Agricultural contamination; Wastewater treatment and management; Offshore pollution and oil spills; Mining and water quality; Soil erosion and water pollution; Emerging technologies; Health risk studies; Micropollution and nanoparticles; Microbiological aspects; Risk assessments; Socio-economic-political consequences; Education and training; Population and climate change; Future trends in water pollution; Emerging approaches for water waste management.
