Yakovlev Aircraft Since 1924 Bill Gunston, Yefim Gordon, 1997 Alexander S. Yakovlev was one of the most versatile aircraft designers of his age, but he had the misfortune to work in the USSR which made him almost unknown to the outside world. In 1926-27 he built his first aeroplane and from then on he designed structures which were, time and again, ahead of their time.

Notes of an Aircraft Designer Alexander Yakovlev, 2001-09-01 This is the frank and engaging autobiography of one of the Soviet Union's most successful aircraft designers. Yakovlev is best known for his piston-engined fighters, his sports planes, some early Soviet helicopters, and the first Soviet all-weather jet fighter. The book includes his interesting, and caustic, impressions of the aircraft industries of Western Europe, which Yakovlev visited in the late thirties. Alexander S. Yakovlev was one of the most versatile aircraft designers of his age, but he had the misfortune to work in the USSR, which made him almost unknown to the outside world. In 1926-27 he built his first aeroplane, the AIR-1, and from then on he consistently designed structures which were years ahead of their time. Yakovlev died in 1989, and today his design bureau, still on the site of the old bed factory, is the giant Yak Aircraft Corporation. It produces the most important Russian twinjet airliner, a diverse group of general aviation aircraft, an advanced jet trainer and light attack aircraft and, in conjunction with the Museum of Flying in California, replicas of the Yak-3 wartime fighter. The Yakovlev Design Bureau has designed aircraft from gliders to jet transports, not to mention vertical take-off fighters and helicopters since before World War II.

Yakovlev Aces of World War 2 George Mellinger, 2012-10-20 The Yak-1 entered Soviet service in 1941, one of three modern types of aircraft accepted for production just prior to the German invasion of the USSR. Despite initial shortcomings, it soon proved to be the thoroughbred of the Soviet Airforce. Indeed, it remained in production until the end of the war, modernized but fundamentally recognizable. By VE-day about 33,100 Yakovlev fighters had been built. Virtually all Soviet fighter regiments flew at least one variety of Yak for a time, including those which gained their fame identified with other aircraft, and consequently many pilots known as Airacobra or Lavochkin aces also scored victories with the Yak. Many other famous aces were exclusively 'Yak patriots', including the French Normandie pilots. This book focuses on the Soviet aces who scored all, or most of their victories in the Yak, drawing information from official unit histories and memoirs of the Soviet pilots themselves.

The History of Soviet Aircraft from 1918 Václav Němeček, 1986 Om de mange, hovedsagelig militære fly, der er produceret i Sovjetunionen siden 1918

Stalingrad Ben Skipper, 2023-05-30 The very name Stalingrad has become synonymous with military folly and political arrogance. Its capture by the Wehrmacht was a crushing defeat, both militarily and politically, for the Red Army. The 6th Army was a highly experienced key element of Army Group South. In late June 1942 it rolled eastwards as part of the summer offensive to capture the vital oilfields of Baku and secure the city on the Volga that bore the name of the Soviet leader. The 6th Army was the acme of German military might and on paper it should have easily overwhelmed the defenders of Chuikov's 62nd Army. However its commander, General Friedrich Wilhelm Ernst Paulus, lacked field experience. His army would pay the price. Stalingrad was a new type of battlefield and it would test the mettle of attacker and defender to the very limit, all the while the thermometer plunged. This Battle Craft title also looks at four pieces of military hardware that were involved in these legendary battles. Innumerable T-34's, which often rolled off local assembly lines unpainted and straight into battle took on the Stug III assault gun as it supported troops fighting for mere meters of territory. Overhead, in the frigid air, deadly V, Ju87 Stuka and Yak 9s, were locked in battle for air superiority over the shattered remains of a once vibrant city. The Quartermaster section provides the modeller with an insight into the development and operational use of the four chosen vehicles and aircraft that were involved in the Battles of El Alamein. A selection of historical and contemporary photos and illustrations feature alongside stunning showcase builds, providing the modeller with subjects to whet the creative appetite. It also features details of model kits and extras that can really help the modeller bring military history to life.

Russian Aviation and Air Power in the Twentieth Century John Greenwood, Von Hardesty, Robin Higham, 2014-06-11 In the light of new archival material the editors take a fresh look at Russian aviation in the twentieth century. Presenting a comprehensive view of Russian aviation, from its genesis in the late czarist period to the present era, the approach is essentially chronological with a major emphasis on the evolution of military aviation. The contributions are diverse, with appropriate attention to civilian and institutional themes.

The Soviet Fighter Yakovlev Yak-3 Anirudh Rao, 2020-12-28 Yakovlev Yak-3 is considered one of the best World War 2 fighters, invariably praised by those who flew it in combat for its remarkable performance. The Germans also treated it with respect, which is perhaps best illustrated by Generalleutnant Walter Schwabedissen's remark: The Yak-3 was a tough nut to crack for our pilots. It outperformed our machines in speed, maneuverability and rate of climb. The emergence of Yak-3 was a compromise between the need to improve the Yak-1's characteristics and the limitations of Soviet aircraft industry and its outdated technologies. The basic design concept took those shortcomings into account, which allowed a rapid launch of mass production of this inexpensive fighter. This in turn would provide frontline units with timely deliveries of new equipment to recoup combat losses. The key to Yak-3's success was not the use of a new powerplant (in those days hard to come by in the USSR), but rather squeezing every bit of performance out of the M-105PF engine, which resulted in a five percent increase in power output. In combination with some serious weight shedding, the Yak-3 had a significantly better performance than the Yak-1. At altitudes up to 5,000 m (which is where most of the air combat over Eastern Front took place), Yak-3 outperformed both the Bf-109 and Fw-190 in rate of climb and maneuverability. Unlike the Yak-1, the new fighter could also stay with the enemy in a dive.

Soviet Aircraft Industry Peter G Dancey, 2017-04-22 Soviet aircraft industry was an essential part of the USSR's campaign for global dominance in the twentieth century. Thanks to the thick fog of secrecy that enveloped it throughout the Cold War, it has long inspired the fascination of analysts and enthusiasts in the West; until the collapse of the USSR in 1991, details of Soviet aircraft were often a matter of conjecture. This book aims to uncover fully the mystery surrounding this topic. Drawing on original and previously unpublished information obtained directly from the former USSR, Soviet Aircraft Industry examines the unique characteristics of Soviet-designed aircraft—particularly military types, which were the cause of great concern to the West. Further, by virtue of the industry's central role throughout Soviet history, this book provides a rare and important perspective into the broader theme of Russia's great communist experiment.

Yakovlev Fighters of World War Two Yefim Gordon, Sergey Komissarov, Dmitriy Komissarov, 2015-03-30 Founded in 1927, the design bureau headed by Aleksandr S. Yakovlev started out with light aircraft but soon became a fighter maker when the prospect of war loomed large. Originally designated I-26, Yakovlev's simple but rugged fighter, first flew in 1940 and entered production at the end of the year as the Yak-1. The Yak-9 followed in 1942 and brought a greater proportion of metal to the airframe design leading to the development of the long-range Yak-9D, the up-gunned tank buster versions (Yak-9-37, Yak-9T, Yak-9K etc.) and the Yak-9B light bomber. Later flown by the French pilots of the Normandie-Niemen squadron of the Soviet Air Force the Yak-3 introduced in 1943 came to be recognized as one of the best fighters of WW II. This detailed history is richly illustrated with unit badges, nose art, scale drawings, color side views and three-views. Previously unreleased photos and personal stories from pilots in the Great Patriotic War ensure Yakovlev Fighters of World War II is a detailed reference source for modelers, enthusiasts and historians alike.

Stalin's Falcons Dmitry Zubov, 2024-06-13 In this stunning exposé, Dmitry Zubov reveals the dark truth of the terrible losses suffered by Soviet flyers, the inferiority of the Russian aircraft on World War II's Eastern Front, and the almost slave-like conditions in which those aircraft were made. The Soviet history of the Second World War, written under the conditions of a totalitarian regime, reflected all its features, with the result that it includes solid sets of patriotic fables that have no connection with reality. Many of the events of the war were distorted beyond recognition or even made up from beginning to end. Archives containing original documents were available only to selected, specially verified KGB 'historians' who presented only the version of the war that was acceptable to the Soviet regime. After the collapse of the Soviet Union, the process of

declassifying archives and gaining wide access to information gradually began to reveal the terrible truth of the crimes of the Soviet regime. One of which, of course, was the incompetent leadership of the Red Army, which led to massive loss of life across the military and civilians alike. However, the consequences of decades of Soviet propaganda had a strong impact on both Russian and world historical science. Because of this, not only Russian, but, unfortunately, many European and American historians found themselves repeating the Soviet myths they had been fed. The history of Soviet fighter aircraft did not escape this fate. The tale of Stalin’s so-called ‘Falcons’, who allegedly shot down dozens and even hundreds of Luftwaffe aircraft, was persistently drummed into the heads of many generations of Russian people. These heroes, supposedly, flew Soviet fighters whose technical characteristics were many times superior to their German counterparts, with the result that Luftwaffe aces were reportedly afraid of meeting them in the air. These primitive propaganda clichés became a model for describing the actions of Stalin’s fighter aircraft. In this stunning exposé, Stalin’s Falcons reveals the stark and dark truth of the terrible losses suffered by Soviet flyers, the inferiority of the Russian aircraft and the almost slave-like conditions in which those aircraft were made.

Air War on the Eastern Front Mike Guardia,2020-10-28 A pictorial history of Nazi Germany’s entire air campaign against the Soviet Union on the Eastern Front in World War II. The Red Air Force versus the Luftwaffe in the skies over Eastern Europe. June 1941: Having conquered most of Western Europe, Adolf Hitler turned his attention to the vast Soviet Union. Disregarding his Non-Aggression Pact with Joseph Stalin, Hitler launched Operation Barbarossa, a full-scale invasion of the Soviet homeland . . . aimed squarely at Moscow. In the skies over Russia, the battle-hardened airmen of the Luftwaffe made short work of the Red Air Force during opening days of Barbarossa. To make matters worse, Stalin had executed many of his best pilots during the perennial “purges” of the 1930s. Thus, much of the Red Air Force was destroyed on the ground before meeting the Luftwaffe in the skies. By 1944, however, the Soviet airmen had regained the initiative and fervently wrested air superiority from the now-ailing Axis Powers. “Will be of great interest to both modelers and aircraft historians alike.” —AMPS Indianapolis “This slim survey provides a quick, convenient intro to the deadly totalitarian duel. Make it a launchpad to further study of Eastern Front air combat in WWII.” —Cybermodeler “The prose is smooth and provides a top-level look at WWII German and Soviet air warfare.” —Historical Miniatures Gaming Society

Yakovlev Yak-1, Yak-3, Yak-7, Yak-9 Wojciech Sankowski,Wojciech Zmyslony,2015 By 1941, the career of the Spitfire is well underway and the RAF has a powerful aircraft with the Mark V that exceeds all expectations. But it is the Mk IX, commissioned urgently in the summer of 1942, which becomes the most famous Spitfire. The latest version of the Spitfire, the Mark XVI, fitted with a Rolls Royce Merlin engine, is actually a Mk.

Yakovlev Yak-25/26/27/28 Yefim Gordon,2002 During the 1950s and 1960s the Soviet design bureau Yakovlev was responsible for a series of swept-wing twin-engined jet combat aircraft, all of which are covered in this Aerofax volume and in the usual format with a mass of new information, details, and illustrations from original Russian sources.

Russia's Heroes Albert Axell,2012-10-25 With Hitler's invasion of Russia on 22 June 1941, the Eastern front opened and politicians and generals around the world predicted the swift destruction of the Soviet armies. Nazi Germany threw its might against Russia: 5,000,000 men took part in the blitz attack along the Russian frontier. From interviews and primary evidence, much of it never previously published, unfolds the story of the Eastern Front, interweaving accounts of the men and women who served with the progress of the war itself. A tale of unbelievable heroism.

Soviet V/STOL Aircraft Michael J. Hirschberg,1997 This important case study reports on the V/STOL development activities in the Soviet Union. As in the West, the Soviets also began using flying test rigs in the late 1950s. By combining the lift engines with modifications to existing engines, the Soviets were able to deploy the Yak-38 Forger only two years after the Harrier. The Forger was in service for 15 years before the political situation forced its retirement from service. Packed with illustrations, references, glossaries, and bibliographies, this case study is a necessary resource for the studies of V/STOL aircraft and systems designers.

The Osprey Encyclopedia of Russian Aircraft Bill Gunston,2000-05-25 Sweeping away the red herrings and spurious details invented in the West between 1950 and 1970, this exhaustive volume can be offered to the public with the knowledge that it documents the true histories of some 1000 aircraft types. Much of what was believed to be fact has been proven wrong in various degrees, and it can confidently be claimed that no book in the history of aviation has ever contained so much new information. The volume is prefixed by sections on aircraft designations, engines, air launched weapons and much more - this really is the definitive work on Russian aircraft.

Yakovlev's Piston-Engined Fighters Yefim Gordon,Dmitriy Khazanov,2002 The Red Star series concentrates on Russian subjects with similar in-depth text, drawings and photographs, with emphasis on color drawings. All are compiled by Russian experts and present an immense amount of fresh material from previously inaccessible archives and sources, proving invaluable for enthusiasts, historians, and modelers. These volumes are packed with authoritative text, photographs, and drawings.
