**Yakolev** Dariusz Paduch,2020-09-30

Yakovlev Yak-25/26/27/28 Yefim Gordon,2002 During the 1950s and 1960s the Soviet design bureau Yakovlev was responsible for a series of swept-wing twin-engined jet combat aircraft, all of which are covered in this Aerofax volume and in the usual format with a mass of new information, details, and illustrations from original Russian sources.

**Yakovlev YAK-23** Marian Mikolajczuk,2008-10-01 The Yak-23 was the final development of the highly successful Soviet fighter series which began with the Yak-1 in 1940. Its immediate predecessors were the Yak-15 and Yak-17, both simple jet-powered Seriesversions of the wartime Yak-3; the Yak-23 was an updated all-metal version of the basic design. It saw service with several Warsaw Pact air forces, as a lightweight fast-climbing interceptor. The design, development and operations of the Yak-15, -17 and -23 are described and illustrated in this book, which is complete with photos, scale plans, drawings and color profiles. An essential guide to these first-generation Soviet fighter aircraft!

**Yakovlev Aircraft Since 1924** Bill Gunston,Yefim Gordon,1997 Alexandr S. Yakovlev was one of the most versatile aircraft designers of his age, but he had the misfortune to work in the USSR which made him almost unknown to the outside world. In 1926-27 he built his first aeroplane and from then on he designed structures which were, time and again, ahead of their time.

**Yakovlev Yak-1, Yak-3, Yak-7, Yak-9** Wojciech Sankowski,Wojciech Zmyslony,2015 By 1941, the career of the Spitfire is well underway and the RAF has a powerful aircraft with

the Mark V that exceeds all expectations. But it is the Mk IX, commissioned urgently in the summer of 1942, which becomes the most famous Spitfire. The latest version of the Spitfire, the Mark XVI, fitted with a Rolls Royce Merlin engine, is actually a Mk.

**The Osprey Encyclopedia of Russian Aircraft** Bill Gunston, 2000-05-25 Sweeping away the red herrings and spurious details invented in the West between 1950 and 1970, this exhaustive volume can be offered to the public with the knowledge that it documents the true histories of some 1000 aircraft types. Much of what was believed to be fact has been proven wrong in various degrees, and it can confidently be claimed that no book in the history of aviation has ever contained so much new information. The volume is prefixed by sections on aircraft designations, engines, air launched weapons and much more - this really is the definitive work on Russian aircraft.

**Early Soviet Jet Fighters** E. Gordon, Yefim Gordon, 2002 This charts the development and service history of the first-generation Soviet jet fighters designed by such renowned fighter makers as Mikoyan, Yakovlev and Sukhoi, as well as design bureau no longer in existence--the Lavochkin and Alekseyev OKBs, during the 1940s and early 1950s. Each type is detailed and compared to other contemporary jet fighters. As ever the extensive photo coverage includes much which is previously unseen.

*Yakovlev's V/STOL Fighters* John Fricker, Piotr Butowski, 1995 Beskrivelse af udviklingen og teknologien bag russiske V/STOL jagerfly.

**Active Aeroelastic Wing** Fouad Sabry, 2022-10-25 What Is Active Aeroelastic Wing The X-53 Active Aeroelastic Wing (AAW) development program is an American research project that has been completed. This project was carried out jointly by the Air Force

Research Laboratory (AFRL), Boeing Phantom Works, and NASA's Dryden Flight Research Center. At NASA's Dryden Flight Research Center, the technology was flight tested on a modified McDonnell Douglas F/A-18 Hornet. Active Aeroelastic Wing Technology is a technology that blends the aerodynamics, controls, and structure of a wing in order to harness and regulate the aeroelastic twist that a wing experiences under dynamic stresses and high speeds. The use of multiple leading and trailing edge controls, such as aerodynamic tabs, enables subtle amounts of aeroelastic twist to be controlled to provide large amounts of wing control power, while simultaneously minimizing maneuver air loads under high wing strain conditions or aerodynamic drag under low wing strain conditions. This is accomplished while maintaining a balance between the two extremes of wing strain conditions. This operation served as the very first demonstration of AAW technology on a large scale. **LaGG & Lavochkin Aces of World War 2** George Mellinger, 2012-10-20 This book examines the LaGG family of fighters, that were amongst the first modern piston-engined interceptors made available to the Red Air Forces in early 1941 and proved far better fighters than their radial-engined predecessors. Despite technical maladies and political interference from Moscow, the LaGG-3 matured into an effective fighter when flown to its strengths at low level. Many early Soviet aces were weaned on the LaGG-3, and if they survived the early massacres of 1941-42, they went on to fly the Lavochkin family of fighters. Indeed, the Lavochkin La-3, -5 and -7 were the fighters of choice for Heroes of the Soviet Union such as Ivan Kozhedub, who claimed 62 kills.

**MIG Alley: The Fight For Air Superiority [Illustrated Edition]** William Y'Blood, 2014-08-15 Includes more than 20 photo illustrations The fight for air superiority began the day the Korean War started and only ended with the armistice three years later. Once the shock of the North Koreans' invasion wore off, it did not take long for the United States Air Force, assisted by other United Nations air forces, to destroy the North Korean Air Force. The arrival of the MiG-15 in November 1950, often flown by Soviet pilots, changed things considerably however. For the remainder of the war, bitterly contested air battles were fought almost daily. Yet despite a decided numerical superiority in jet fighters, the

Communists were never able to gain air superiority, testament to the skill and training of the UN fighter pilots, primarily those U.S. Air Force airmen flying the magnificent F-86 Sabre.

**Soviet Spyplanes of the Cold War** Yefim Gordon, Dmitriy Komissarov, 2013-11-04 “A good look at the MiG-25 recce birds...Definitely recommended!”—Cybermodeler “Spy in the Sky” matters have long been a source of fascination for aircraft enthusiasts, historians, and modelers, and none more so than the elusive and secretive Soviet types of the Cold War era. Here, Yefim Gordon presents a range of such types, in a collection of photographs, profiles, and line drawings together with supplementary text detailing the history of each craft, encompassing the various developmental milestones, successes, and pitfalls experienced along the way. The Soviet Union’s two dedicated spyplane types, the Yakovlev Yak-25RV “Mandrake” (the Soviet equivalent of the Lockheed U-2) and the MiG-25R “Foxbat” are profiled, supplemented by details garnered from a host of original sources. Well-illustrated histories and structural analyses are set alongside detailed descriptions of the various plastic scale model kits that have been released, along with commentary concerning their accuracy and available modifications and decals. With an unparalleled level of visual information—paint schemes, models, line drawings and photographs—it is simply the best reference for any model-maker setting out to build a variant of this iconic craft.

**Aircraft Design Projects** Lloyd R. Jenkinson, Jim Marchman, 2003-04-28 Written with students of aerospace or aeronautical engineering firmly in mind, this is a practical and wide-ranging book that draws together the various theoretical elements of aircraft design -

structures, aerodynamics, propulsion, control and others - and guides the reader in applying them in practice. Based on a range of detailed real-life aircraft design projects, including military training, commercial and concept aircraft, the experienced UK and US based authors present engineering students with an essential toolkit and reference to support their own project work. All aircraft projects are unique and it is impossible to provide a template for the work involved in the design process. However, with the knowledge of the steps in the initial design process and of previous experience from similar projects, students will be freer to concentrate on the innovative and analytical aspects of their course project. The authors bring a unique combination of perspectives and experience to this text. It reflects both British and American academic practices in teaching aircraft design. Lloyd Jenkinson has taught aircraft design at both Loughborough and Southampton universities in the UK and Jim Marchman has taught both aircraft and spacecraft design at Virginia Tech in the US. \* Demonstrates how basic aircraft design processes can be successfully applied in reality \* Case studies allow both student and instructor to examine particular design challenges \* Covers commercial and successful student design projects, and includes over 200 high quality illustrations

Soviet and Russian Ekranoplans Sergey Komissarov, Yefim Gordon, 2020 One of the most unusual strands in aviation history has been the development of wing-in-ground effect (WIG) vehicles, or as they are more commonly known by their Russian name, Ekranploans. Beginning with a brief outline of the concept from the theory to viable technical solutions, this new, expanded edition of Soviet and Russian Ekranploans gives a historical survey of the development of WIG research and construction in Russia. A large part of the book

focuses on a type-by-type description of specific designs of ekranoplans developed in the Soviet Union and Russia in the course of half a century. Special emphasis is given to the activities of Rostislav Alekseyev, who has played an enormous role in the development of this new technology. Ekranoplans developed by several other major design bureaus, notably those led by Sukhoi, Bartini and Beriyev, are also considered. Economic and political transformations following the break-up of the Soviet Union led to the emergence of privately-owned design bureaus and firms that are now pursuing the development of WIG aircraft in Russia, given the lack of interest on the part of the military and the state in this branch of transport technology. This new edition has been fully updated to include unpublished photos and diagrams and examples of similar technology being developed in countries outside of Russian, including the USA, Germany and China. This is a welcome update to a book regarded as the definitive work on these unusual and exciting aircraft.

*Commercial Aircraft Composite Technology* Ulf Paul Breuer, 2016-05-10 This book is based on lectures held at the faculty of mechanical engineering at the Technical University of Kaiserslautern. The focus is on the central theme of societies overall aircraft requirements to specific material requirements and highlights the most important advantages and challenges of carbon fiber reinforced plastics (CFRP) compared to conventional materials. As it is fundamental to decide on the right material at the right place early on the main activities and milestones of the development and certification process and the systematic of defining clear requirements are discussed. The process of material qualification - verifying material requirements is explained in detail. All state-of-the-art composite manufacturing technologies are described, including changes and

complemented by examples, and their improvement potential for future applications is discussed. Tangible case studies of high lift and wing structures emphasize the specific advantages and challenges of composite technology. Finally, latest R&D results are discussed, providing possible future solutions for key challenges such as low cost high performance materials, electrical function integration and morphing structures.

Soviet Cold War Fighters Alexander Mladenov, 2017-04-20 Beautifully illustrated with many rare and unpublished photographs, Soviet Cold War Fighters looks at the main development periods of Soviet fighter designs and covers all the important features and developments for each - a total of four generations of fighter were developed from the late 1940s to the early 1980s - that witnessed the most iconic and powerful fighters such as the legendary MiG-15, MiG-21, Tu-128, Su-9, MiG-23, MiG-25 reach for the skies, followed by the modern day MiG-29, MiG-31 and Su-27, which strike fear in the West for their phenomenal weaponry and blistering performance. All aircraft are described in detail with facts and figures, including their weapons and instances of combat employment, as well as explaining how the Cold War drastically changed Soviet fighter design to counter the West. Researched and written by Alexander Mladenov, a leading aviation journalist, this is a highly detailed testament to leading Soviet fighter design and development.

**Soviet X-planes** E. Gordon, Yefim Gordon, Bill Sweetman, 1992 Detailed review of Soviet experimental aircraft from the early 1900s to the latest Russian prototypes of today. Describes about 150 aircraft types -- each with relevant data -- including many three-view drawings.

**The Russian Air Force in the Eyes of German Commanders** Generalleutnant

Walter Schwabedissen, 2017-06-28 The Russian Air Force in the Eyes of German Commanders by Generalleutnant a. D. Walter Schwabedissen, is one of a series of historical studies written by, or based on information supplied by, former key officers of the GAF for the United States Air Force Historical Division. The overall purpose of the series is twofold: 1) To provide the U.S. Air Force with a comprehensive and, insofar as possible, authoritative history of a major air force which suffered defeat in World War II, a history prepared by many of the principal and responsible leaders of that air force; 2) to provide a firsthand account of that air force's unique combat in a major war, especially its fight against the forces of the Soviet Union. This series of studies therefore covers in large part virtually all phases of the Luftwaffe's operations and organization, from its camouflaged origin in the Reichswehr, during the period of secret German rearmament following World War I, through its participation in the Spanish Civil War and its massive operations and final defeat in World War II, with particular attention to the air war on the Eastern Front. In World War II the Russian Air Force came of age. The men most vitally concerned with this, aside from the Russians themselves, were commanders in the German armed forces. The experience of these commanders, then, constitutes a unique source for information on an organization whose capabilities, both past and future, are of vital concern to the world. The chief German experience with the Russian Air Force derives from World War II. It was during this period that the Russians learned most from the Germans and the Germans learned most about the Russians. This study exploits this broad German experience. Compiled from the official records of the German Air Force and from reports written by German commanders who saw action in the Russian campaign, it documents many of the Russian Air Force's

achievements as well as its failures.
