**E. Gordon, Yefim Gordon**

Yakovlev YAK-23 Marian Mikolajczuk,2008-10-01 The Yak-23 was the final development of the highly successful Soviet fighter series which began with the Yak-1 in 1940. Its immediate predecessors were the Yak-15 and Yak-17, both simple jet-powered Seriesversions of the wartime Yak-3; the Yak-23 was an updated all-metal version of the basic design. It saw service with several Warsaw Pact air forces, as a lightweight fast-climbing interceptor. The design, development and operations of the Yak-15, -17 and -23 are described and illustrated in this book, which is complete with photos, scale plans, drawings and color profiles. An essential guide to these first-generation Soviet fighter aircraft!

**Yakovlev Aircraft Since 1924** Bill Gunston,Yefim Gordon,1997 Alexandr S. Yakovlev was one of the most versatile aircraft designers of his age, but he had the misfortune to work in the USSR which made him almost unknown to the outside world. In 1926-27 he built his first aeroplane and from then on he designed structures which were, time and again, ahead of their time.

**Yakovlev Yak-36, Yak-38 and Yak-41** E. Gordon,Yefim Gordon,2008 The latest volume in the 'Red Star' series examines the development of Soviet VTOL aircraft designed by the Yakovlev Aircraft company. As with other volumes in the 'Red Star' series, the book includes a comprehensive account of the development and operational record of the aircraft.

**Early Soviet Jet Fighters** E. Gordon,Yefim Gordon,2002 This charts the

development and service history of the first-generation Soviet jet fighters designed by such renowned fighter makers as Mikoyan, Yakovlev and Sukhoi, as well as design bureau no longer in existence--the Lavochkin and Alekseyev OKBs, during the 1940s and early 1950s. Each type is detailed and compared to other contemporary jet fighters. As ever the extensive photo coverage includes much which is previously unseen.

*The Soviet Fighter Yakovlev Yak-3* Anirudh Rao, 2020-12-28 Yakovlev Yak-3 is considered one of the best World War 2 fighters, invariably praised by those who flew it in combat for its remarkable performance. The Germans also treated it with respect, which is perhaps best illustrated by Generalleutnant Walter Schwabedissen's remark: The Yak-3 was a tough nut to crack for our pilots. It outperformed our machines in speed, maneuverability and rate of climb. The emergence of Yak-3 was a compromise between the need to improve the Yak-1's characteristics and the limitations of Soviet aircraft industry and its outdated technologies. The basic design concept took those shortcomings into account, which allowed a rapid launch of mass production of this inexpensive fighter. This in turn would provide frontline units with timely deliveries of new equipment to recoup combat losses. The key to Yak-3's success was not the use of a new powerplant (in those days hard to come by in the USSR), but rather squeezing every bit of performance out of the M-105PF engine, which resulted in a five percent increase in power output. In combination with some serious weight shedding, the Yak-3 had a

significantly better performance than the Yak-1. At altitudes up to 5,000 m (which is where most of the air combat over Eastern Front took place), Yak-3 outperformed both the Bf-109 and Fw-190 in rate of climb and maneuverability. Unlike the Yak-1, the new fighter could also stay with the enemy in a dive.

**The Osprey Encyclopedia of Russian Aircraft** Bill Gunston, 2000-05-25

Sweeping away the red herrings and spurious details invented in the West between 1950 and 1970, this exhaustive volume can be offered to the public with the knowledge that it documents the true histories of some 1000 aircraft types. Much of what was believed to be fact has been proven wrong in various degrees, and it can confidently be claimed that no book in the history of aviation has ever contained so much new information. The volume is prefixed by sections on aircraft designations, engines, air launched weapons and much more - this really is the definitive work on Russian aircraft.

*LaGG & Lavochkin Aces of World War 2* George Mellinger, 2012-10-20 This book examines the LaGG family of fighters, that were amongst the first modern piston-engined interceptors made available to the Red Air Forces in early 1941 and proved far better fighters than their radial-engined predecessors. Despite technical maladies and political interference from Moscow, the LaGG-3 matured into an effective fighter when flown to its strengths at low level. Many early Soviet aces were weaned on the LaGG-3, and if they survived the early massacres of 1941-42, they went on to fly the Lavochkin family of fighters. Indeed, the Lavochkin La-3, -5 and -7 were the fighters of choice

for Heroes of the Soviet Union such as Ivan Kozhedub, who claimed 62 kills.

**Korean Air War** Michael Napier, 2021-03-18 From acclaimed aviation historian Michael Napier, this is a highly illustrated survey of the air war over Korea. The Korean War holds a unique place in aviation history. It saw the first large-scale jet-versus-jet combat and it was the first military action of the Cold War, fought by both the newly independent United States Air Force and the recently formed Chinese People's Liberation Army Air Force. In a meticulously researched volume, former RAF Tornado pilot Michael Napier unravels the complex narrative of events, describing the course of operations in the air and the major campaigns of the land war. He examines in detail the air power of the major combatants, which included North and South Korea, the UK, Australia, Canada and South Africa as well as China, the USA and the USSR. Packed with stunning contemporary images and including first-hand combat reports, Korean Air War is a groundbreaking exploration of a much forgotten conflict, which nevertheless provided lessons about the organization and prosecution of modern aerial warfare that remain relevant through to the present day.

**Soviet Air Defence Aviation 1945-1991** Yefim Gordon, Dmitriy Komissarov, 2012-10-31

**Polikarpov I-15, I-16 and I-153 Aces** Mikhail Maslov, 2013-02-20 The I-15, I-16 and I-153 fighters were the world's first mass-produced fighters. Some 17,000 Polikarpovs had been manufactured by the time production ceased in

1941. They served with the Republicans in the Spain, the Chinese against Japan in 1937–38, and the Soviets against both Japan in the Nomonhan Incident and Finland during the Winter War. By 1941, more than 20 Soviet pilots had made ace in Polikarpovs, and many more attained that status during the first months of the German invasion. Though thoroughly outclassed, the Polikarpov was the backbone of the Soviet air force during the early months of the war in the east, and continued to serve, as training aircraft and as frontline fighters, some right through to 1945.

**Russian and Soviet Ground Attack Aircraft** Alberto Trevisan, Anatoly P. Borovik, 2020-09-24

**Soviet Air Force Fighter Colours 1941-1945** Erik Pilawskii, 2003 This book represents probably the most detailed study published in the English language of the camouflage and markings of the fighter aircraft of the Soviet Air Force during World War II. Erik Pilawskii is a scholar of the Soviet Air Force in World War II and has undertaken several years of research to produce this ground-breaking book. With information drawn from previously inaccessible Soviet archives, the author first presents a detailed analysis of the developments, trends, patterns and irregularities of the color systems seen on Russian fighters and offers a fascinating insight into the workings of the Soviet manufacturing system responsible for this task. He then brings readers a technical study of each of the main fighter aircraft and variants, and each description is followed by coverage of camouflage and markings,

factory-applied, field variations and seasonal. The text is supported by hundreds of rare and previously unpublished photographs and more than 40 commissioned full color artworks. Furthermore, hundreds of color illustrations portray the immense variety of patterns related to this fascinating subject. This book will be a must-have for all students of Soviet air power and Russian aircraft modelers.

California Warbird Survivors 2002 Harold A. Skaarup, 2002-07-18 During the twentieth century, civil and military aviation has played a prominent role in the history and development of California. Commercial operators have exploited the advantages offered by aircraft to overcome its unique challenges of geography and climate. By virtue of California's comparative size and strategic importance on the West Coast of the continental USA, a wide variety of military aircraft have been based there through the years. The list of military aircraft types that made up the tapestry of California aviation is as extensive as the list of legendary figures who have contributed to its amazing history. While most of the military aircraft types no longer grace the airspace over California, many can be viewed in their former splendor as they stand as gate guards or museum exhibits. This booklet provides a comprehensive guide to where these restored aircraft can be found. Complementing the details concerning aircraft specifications and roles, the author has included many facts. Finally, the descriptions of the recovery, restoration and preservation efforts stand as a tribute to the many

volunteers who have devoted time, energy and financial support to ensure this rich heritage is preserved.

*Soviet and Russian Ekranoplans* Sergey Komissarov, Yefim Gordon, 2020 One of the most unusual strands in aviation history has been the development of wing-in-ground effect (WIG) vehicles, or as they are more commonly known by their Russian name, Ekranploans. Beginning with a brief outline of the concept from the theory to viable technical solutions, this new, expanded edition of *Soviet and Russian Ekranploans* gives a historical survey of the development of WIG research and construction in Russia. A large part of the book focuses on a type-by-type description of specific designs of ekranoplans developed in the Soviet Union and Russia in the course of half a century. Special emphasis is given to the activities of Rostislav Alekseyev, who has played an enormous role in the development of this new technology. Ekranoplans developed by several other major design bureaus, notably those led by Sukhoi, Bartini and Beriyev, are also considered. Economic and political transformations following the break-up of the Soviet Union led to the emergence of privately-owned design bureaus and firms that are now pursuing the development of WIG aircraft in Russia, given the lack of interest on the part of the military and the state in this branch of transport technology. This new edition has been fully updated to include unpublished photos and diagrams and examples of similar technology being developed in countries outside of Russian, including the USA, Germany and

China. This is a welcome update to a book regarded as the definitive work on these unusual and exciting aircraft.

**The World's Major Airlines** David W. Wragg, 2007 More than 500 different airlines with over five aircraft with more than 19 seats are covered in this book. They are listed alphabetically under their respective nationality, with a brief history of each airline. There are illustrations of tailplane logos and details of route destinations.

*Soviet Cold War Fighters* Alexander Mladenov, 2017-04-20 Beautifully illustrated with many rare and unpublished photographs, *Soviet Cold War Fighters* looks at the main development periods of Soviet fighter designs and covers all the important features and developments for each - a total of four generations of fighter were developed from the late 1940s to the early 1980s - that witnessed the most iconic and powerful fighters such as the legendary MiG-15, MiG-21, Tu-128, Su-9, MiG-23, MiG-25 reach for the skies, followed by the modern day MiG-29, MiG-31 and Su-27, which strike fear in the West for their phenomenal weaponry and blistering performance. All aircraft are described in detail with facts and figures, including their weapons and instances of combat employment, as well as explaining how the Cold War drastically changed Soviet fighter design to counter the West. Researched and written by Alexander Mladenov, a leading aviation journalist, this is a highly detailed testament to leading Soviet fighter design and development.

*The Russian Air Force in the Eyes of German Commanders* Generalleutnant

Walter Schwabedissen, 2017-06-28 The Russian Air Force in the Eyes of German Commanders by Generalleutnant a. D. Walter Schwabedissen, is one of a series of historical studies written by, or based on information supplied by, former key officers of the GAF for the United States Air Force Historical Division. The overall purpose of the series is twofold: 1) To provide the U.S. Air Force with a comprehensive and, insofar as possible, authoritative history of a major air force which suffered defeat in World War II, a history prepared by many of the principal and responsible leaders of that air force; 2) to provide a firsthand account of that air force's unique combat in a major war, especially its fight against the forces of the Soviet Union. This series of studies therefore covers in large part virtually all phases of the Luftwaffe's operations and organization, from its camouflaged origin in the Reichswehr, during the period of secret German rearmament following World War I, through its participation in the Spanish Civil War and its massive operations and final defeat in World War II, with particular attention to the air war on the Eastern Front. In World War II the Russian Air Force came of age. The men most vitally concerned with this, aside from the Russians themselves, were commanders in the German armed forces. The experience of these commanders, then, constitutes a unique source for information on an organization whose capabilities, both past and future, are of vital concern to the world. The chief German experience with the Russian Air Force derives from World War II. It was during this period that the Russians learned most

from the Germans and the Germans learned most about the Russians. This study exploits this broad German experience. Compiled from the official records of the German Air Force and from reports written by German commanders who saw action in the Russian campaign, it documents many of the Russian Air Force's achievements as well as its failures.

**01' Shakey** Gene Fish,2016-09-25 After a lifetime of flying, with experience ranging from novice airman to Director of Training and Standards and pilot examiner for a top name in aviation training organization, there's little Gene Fish hasn't seen. 01' Shakey: Memories of a Flight Engineer shares some of the most memorable stories of Gene's career as a Flight Engineer flying in the Douglas C-124 Globemaster II, nicknamed 01' Shakey - an aircraft that had a habit of keeping the flight crews on their toes dealing with quirky malfunctions. From a colorful layover at Midway Island to kite-flying at Pope Air Force Base, to overspeeding propellers, Gene's stories will entertain military personnel, aviators and anyone who is enthusiastic about the romance of flying - and gives a glimpse of the reality behind that romance.
