Cellular Agriculture Evan D. G. Fraser,David L. Kaplan,Lenore Newman,Rickey Y. Yada,2023-11-23 Cellular Agriculture: Technology, Society, Sustainability and Science provides a state-of-the-art review of cellular agriculture technologies. From cell selection to scaffolding and everything in-between, this book contains chapters authored by leading cellular agriculture researchers and product developers across the world.Driven by consumer desire for sustainable food production, animal welfare improvements, and better human health, companies around the world are racing to engineer alternative protein products with the best flavour, appearance, and texture. This text provides detailed information on the current state of the science and technology of cellular agriculture. It combines the social aspects that need to be considered to create a level playing field to give each emerging idea the best chance at realizing the ultimate vision of cellular agriculture: satisfying the demand for protein around the world in a way that is better for humans, animals, and the planet.This is the first resource of its kind to take a practical approach to review the design, feasibility, and implementation of cellular agriculture techniques. With additional chapters on life cycle analyses and ideal transition scenarios, this book provides a resource for aspiring technology developers and academics alike, seeking evidence-based assessments of the industry and its disruptive potential. Written by industry and academic experts for balanced perspective Presents foundational information with practical application insights Includes chapters on regulatory and policy issues Reviews the sustainability challenges of alternative proteins

Active Matter Within and Around Us Len Pismen,2021-02-15 This book presents a comprehensive review of various aspects of the novel and rapidly developing field of active matter, which encompasses a wide variety of self-organized self-driven energy-consuming media or agents. Most naturally occurring examples are of biological origin, spanning all scales from intracellular structures to swimming and crawling cells and microorganisms, to living tissues, bacterial colonies and flocks of birds. But the field also encompasses artificial systems, from colloids to soft robots. Intrinsically out of equilibrium and free of constraints of time-reversal symmetry, such systems display a range of surprising and unusual behaviors. In this book, the author emphasizes connections between fluid-mechanical, material, biological and technological aspects of active matter. He employs a minimum of mathematical tools, ensuring that the presentation is accessible to a wider scientific community. Richly illustrated, it gives the reader a clear picture of this fascinating field, its diverse phenomena and its open questions.

Model Organisms for Microbial Pathogenesis, Biofilm Formation and Antimicrobial Drug Discovery Busi Siddhardha,Madhu Dyavaiah,Asad Syed,2020-03-28 This book provides essential insights into microbial pathogenesis, host-pathogen interactions, and the anti-microbial drug resistance of various human pathogens on the basis of various model organisms. The initial sections of the book introduce readers to the mechanisms of microbial pathogenesis, host-pathogen interactions, anti-microbial drug resistance, and the dynamics of biofilm formation. Due to the emergence of various microbial resistant strains, it is especially important to understand the prognosis for microbial infections, disease progression profiles, and mechanisms of resistance to antibiotic therapy in order to develop novel therapeutic strategies. In turn, the second part of the book presents a comparative analysis of various animal models to help readers understand microbial pathogenesis, host-pathogen interactions, anti-microbial drug discovery, anti-biofilm therapeutics, and treatment regimes. Given its scope, the book represents a valuable asset for microbiologists, biotechnologists, medical professionals, drug development researchers, and pharmacologists alike.
