**Convair Yb-60** Hugh Harkins,2015-12-10 Convair YB-60 The Consolidated Vultee (Convair) YB-36G intercontinental bomber design emerged in 1950 as a low cost development of the Convair B-36F intercontinental bomber. The new design, which was subsequently re-designated YB-60 in 1951, featured a swept back wing and was powered by eight turbojet engines in a similar arrangement to that seen on the rival Boeing XB/YB-52 bomber. Although there was no official competition, the YB-60 would find itself in direct comparison to the smaller, more versatile Boing aircraft, the latter proving to have far better all-round performance than that of the YB-60 in most important respects, not least of which was speed. This volume describes the YB-36G/YB-60 design iterations leading to flight test of the No.1 YB-60 prototype and the program cancellation in August 1952, by which time the No.2 YB-60, under construction to the final YB-60 design iteration, was around 90% complete. The rival Boeing B-52 went into production in a number of variants, culminating in the turbofan powered B-52H that continues in service in the second decade of the 21st century, more than sixty years after the first flight of the YB-60 and YB-52 prototypes in April 1952.

*Encyclopedia of US Air Force Aircraft and Missile Systems: Post-World War II bombers, 1945-1973* Marcelle Size Knaack,1978

Ultra-Large Aircraft, 1940-1970 William Patrick Dean,2018-04-10 In 1962, a unique transport aircraft was built from the parts of 27 Boeing B-377 airliners to provide NASA a means of transporting rocket boosters. With an interior the size of a gymnasium, The Pregnant Guppy was the first of six enormous cargo planes built by Aero Spacelines and two built by Union de Transport Aeriens. More than half a century later, the last Super Guppy is still in active service with NASA and the design concept has been applied to next-generation transports. This comprehensive history of expanded fuselage aircraft begins in the 1940s with the military's need for a long-range transport. The author examines the development of competing designs by Boeing, Convair and Douglas, and the many challenges and catastrophic failures. Behind-the-scenes maneuvers of financiers, corporate raiders, mobsters and other nefarious characters provide an inside look at aviation development from the drawing board to the scrap yard.

On October 2, 1942, the Bell XP-59 Airacomet soared up and away from present-day Edwards AFB, launching the US Army Air Forces into the Jet Age. In the several decades since, hundreds of new variations of experimental and test turbojet-powered bombers and fighters--X-bombers and X-fighters--have taken explosive flight. These aircraft blazed a trail leading to today's B-2 Stealth Bomber and F-35 Joint Strike Fighter. The Big Book of X-Bombers & X-Fighters showcases all of the USAF jet-powered X-bombers and X-fighters that have flown since 1942--more than 90 in all, including the alphabet soup of their variants. From experimental to prototype service bombers and fighters--from the XB-43 to the B-2A and the XP-59A to the F-35A--they're all here, with their inside stories revealed. Some of these aircraft were further developed. Others were canceled. All stretched the performance and design envelopes. More than 250 photos illustrate all of these experimental aircrafts' cutting-edge features and zeroes in on histories of their design, flight testing, and weapons testing. Specification tables detailing performance, design, and armaments help round out this compendium of information on truly groundbreaking aviation designs. X-bombers and X-fighters in *The Big Book of X-Bombers & X-Fighters* include: Bell P-59 Airacomet Republic P/F-84 Thunderjet Douglas B-43 Jetmaster North American B-45 Tornado Boeing B-47 Stratojet Curtiss P/F-87 Blackhawk McDonnell P/F-85 Goblin Convair P/F-92 Dart Northrop F-17 Cobra Boeing B-1 Lancer And all the rest! **Poorly Visible Media in X-Ray Tomography** V. G. Nazarov, Iu. V. Prokhorov, 2002-01-01 The tomography problem considered in this volume of the Inverse and Ill-Posed Problems Series consists of finding an essential part of information about the internal structure of an unknown medium. More particularly, the contact boundaries between various materials in the medium are sought. This investigation is implemented by studying an appropriate mathematical model, which is represented as a transport equation (linear Boltzmann's equation) together with certain boundary conditions. Both theoretical and numerical methods have been used and the results consist of proved theorems, computer testing of the corresponding algorithms, together with a number of tables. This book may be considered as a continuation and application of Transport Equation and Tomography by D.S. Anikonov, A.E. Kovtanyuk and I.V. Prokhorov, previously published in this series.

**American Aircraft Development Second World War Legacy** William J. Norton, 2021-12-02 This volume focuses on the influence of America's Second World War aviation development and experience, subsequent aviation technological advances, and world events, in shaping American choices in military aircraft and associated weapons' development during the few years following the war. It shows how air warfare weapons from the last conflict were carried forward and altered, how new systems evolved from these, and how the choices fared in the next war--Korea. The period was one of remarkable progress in a short span of time via a great many aircraft and weapons programs, and associated technological progress. These systems were of immense importance influencing and growing the engineering, production, and operational capabilities to be exploited for the next generation of weapons that soon followed. Emphasized is the innovative features or new technology and how these contributed to advancing American military

aviation, influencing the evolution of follow-on models or types. Included are military prototype, experimental, and research aircraft that are equally important in understanding the history of American aircraft development. Combat employment, progress, and equipment adaptation during the Korean Conflict is then highlighted. Tabulated characteristics are provided of those aircraft that entered production or represented significant technological advances influencing others that follow.

*John Clare: Poems of the Middle Period, 1822-1837* John Clare, 1996 Completing the influential Oxford edition of Clare's collected poems, this volume presents the poems of the Northborough period of Clare's creativity. As with other volumes in the edition, many of the poems have never before been published, and Clare's spelling, punctuation, grammar, and vocabulary have all been carefully preserved. This final volume also includes corrections to the texts, variants, and notes in previously-published volumes in the series, along with a cumulative glossary and cumulative indices of first-lines and titles that will assist readers in their use of the edition as a whole. Clare's poetry deals not only with his own countryside, but also with its ceremonies and celebrations, its customs and games, its political, economic, and religious concerns, its proverbs, tales, and songs - indeed, with all aspects of its popular culture. The poems of the Northborough period are some of Clare's best work, demonstrating a particularly concise vision of Clare's experience of Nature.
