Northrop Yf-23 Atf - Op Paul Metz, 2016-12-07 The photos in this edition are black and white. The Northrop YF-23 stealth fighter was evaluated with the Lockheed YF-22. Two aircraft were built, PAV-1 and PAV-2. The Chief Test Pilot for the program was Paul Metz, the author of this book. Although the YF-22 was eventually chosen for production, the YF-23 ATF proved to be a very capable and superb example of Low Observable (LO) fighter technology. This book covers origins of the ATF requirement, other manufacturers submissions including alternate Northrop designs, RFI phase May 1981 to May 1982, CDI phase May 1983 to May 1984, ATF DEM/VAL phase 1986 through 1991, Northrop ATF evolution 1971-1986, ATF team, construction, flight test program, engines, summary and selection, NATF proposal, F/B-23 proposal, aircraft nuts-and-bolts, where are they now, program patches, YF-23 pilots, and YF-23 models.

America's Stealth Fighters and Bombers James C. Goodall, 1992 The first all-color tribute to these marvels of aerospace technology. Within are more than 130 full-color photographs of the planes, prototypes, cockpits, engines, and all the high-tech stealth features that make them so revolutionary.

The YF-23 So Smooth, Stealthy, Yet So Unwanted David Myhra PhD, 2013-09-13 The YF-23 was an unconventional-looking aircraft, with diamond-shaped wings, a profile with substantial area-ruling to reduce drag at trans-sonic speeds, and an all-moving V-tail. The cockpit was placed high, near the nose of the aircraft for good visibility for the pilot. The aircraft featured a tricycle landing gear configuration with a nose landing gear and two main landing gear. The weapons bay was placed on the underside of the fuselage between the nose and main landing gear. The cockpit has a center stick and side throttle.

YF-22 and YF-23 Advanced Tactical Fighters Bill Sweetman, 1991

Lockheed Martin F/A-22 Raptor Jay Miller, 2005 Initially referred to as the Advanced Tactical Fighter (ATF), the F-22 was designed to meet a USAF requirement for 750 new fighters to replace the F-15 Eagle. Work began in the early 1980s, and competition selection resulted in orders for flying demonstration prototypes of the YF-22 and the Northrop YF-23. The first of two prototypes was flown on 29th September 1990, and extensive testing and evaluation took place during that decade. In 1993 an air-to-ground attack role using precision-guided munitions was added to the original air superiority role, and the designation has been changed to F/A-22 to reflect this. The F-22 is designed to supercruise at up to Mach 1.5 without use of the afterburner, and its unusual layout is designed for agility as well as to incorporate stealth characteristics. A planned two-seat trainer version, the F-22B was cancelled, but production deliveries are now taking place, with service introduction planned for 2005. Author Jay Miller has followed the program closely to produce an extensively researched and well-illustrated review of this topical new fighter in the well-established and acclaimed Aerofax style and depth.

Gunn Sights Tom Gunn, 2014-10-15 Tom Gunn had a life-altering career change in 1975 when he went from an eight-year stint as staff lawyer with the U.S. Senate to a job in aerospace sales and marketing at McDonnell Douglas. He knew a lot about military appropriations and classified developments, but almost nothing about marketing. Over the next twenty-two years, however, Gunn and the team he assembled developed a process for strategic selling and marketing that delivered \$250 billion in sales of military and commercial aircraft, missiles, space systems, and logistic support, against strong and at times cutthroat domestic and international competition. His book is both the story of that success and a handbook for anyone who wants to learn about high-powered selling, about assessing the competition and understanding the customer, and about using a defined process to shape strategic planning. Gunn details that process step by step, outlines cultural traps overseas and political realities at home, and makes his points in selected case studies.

Mathematics for Machine Learning Marc Peter Deisenroth, A. Aldo Faisal, Cheng Soon Ong, 2020-04-23 The fundamental mathematical tools needed to understand machine learning include linear algebra, analytic geometry, matrix decompositions, vector calculus, optimization, probability and statistics. These topics are traditionally taught in disparate courses, making it hard for data science or computer science students, or professionals, to efficiently learn the mathematics. This self-contained textbook bridges the gap between mathematical and machine learning texts, introducing the mathematical concepts with a minimum of prerequisites. It uses these concepts to derive four central machine learning methods: linear regression, principal component analysis, Gaussian mixture models and support vector machines. For students and others with a mathematical background, these derivations provide a starting point to machine learning texts. For those learning the mathematics for the first time, the methods help build intuition and practical experience with applying mathematical concepts. Every chapter includes worked examples and exercises to test understanding. Programming tutorials are offered on the book's web site.
