Flawless Elise Hu, 2023-05-23 One of Porchlight's Business Books of the Year | One of Vox's Best Books of 2023 | An NPR Book of the Day | Required Reading from New York Post | One of Nylon's 13 May Books to Add to Your Reading List | One of PureWow's 14 Books to Read for AAPI Heritage Month | One of W Magazine's 14 Books to Dive Into This Summer | One of Betches' Best Summer Reads of 2023 An audacious journalistic exploration of the present and future of beauty through the lens of South Korea's booming K-beauty industry and the culture it promotes, by Elise Hu, NPR host-at-large and the host of TED Talks Daily K-beauty has captured imaginations worldwide by promising a kind of mesmerizing perfection. Its skincare and makeup products—creams packaged to look like milkshakes or pandas, and snail mucus face masks, to name a few—work together to fascinate us, champion consumerism, and invite us to indulge. In the four years Elise spent in Seoul as NPR's bureau chief, the global K-beauty industry quadrupled. Today it's worth \$10 billion and is only getting bigger as it rides the Hallyu wave around the globe. And fun as self-care consumerism may be, Elise turns her veteran eye to the darker questions lurking beneath the surface of this story. When technology makes it easy to quantify and optimize ourselves—from banishing blemishes, to whittling our waistlines, even to shaving down our jaws—where do we draw the line? What are the dangers for a society where a flawless face and body are promoted and possible? What are the real financial, physical, and emotional costs of beauty work in a culture that valorizes endless self-improvement and codes it as empowerment? With rich historical context and deep reporting, including hours of interviews with South Korean women, this is a complex, provocative look at the ways hustle culture has reached into the sinews of our bodies. It raises complicated questions about gender disparity, consumerism, the beauty imperative of an appearance obsessed society, and the undeniable political, economic, and social capital of good looks worldwide. And it points the way toward an alternative vision, one that's more affirming and inclusive than a beauty culture led by industry.

The Memoirs of Lady Hyegyong JaHyun Kim Haboush, 2013-09-14 Lady Hyegyong's memoirs, which recount the chilling murder of her husband by his father, form one of the best known and most popular classics of Korean literature. From 1795 until 1805 Lady Hyegyong composed this masterpiece, depicting a court life Shakespearean in its pathos, drama, and grandeur. Presented in its social, cultural, and historical contexts, this first complete English

XeHE: an Intel GPU Accelerated Fully Homomorphic Encryption Library: A SYCL Sparkler: Making the Most of C++ and SYCL Alexander Lyshevsky, Alexey Titov, Yiqin Qiu, Yujia Zhai, 2023-04-02 This installment of a SYCL Sparkler explores in depth a way to implement a reasonably efficient implementation for Homomorphic Encryption using modern C++ with SYCL. As a result of their work, the authors learned some valuable optimization techniques and insights that they have taken time to share in this very interesting and detailed piece. A key value of using C++ with SYCL, is the ability to be portable while supporting the ability to optimize at a lower level when it is deemed worth the effort. This work helps illustrate how the authors isolated that optimization work, and their thought process on how to pick what to optimize. The code for this implementation is available open source online. None of the performance numbers shown are intended to provide guidance on hardware selection. The authors offer their results and observations to illustrate the magnitude of changes that may correspond to the optimizations being discussed. Readers will find the information valuable to motivate their own optimization work on their applications using some of the techniques highlighted by these authors. Key Insights shared include: pros/cons of a hand-tuned vISA, memory allocation overheads, multi-tile scaling, event-based profiling, algorithm tuning, measuring of device throughput, developing with 'dualities' to increase portability and performance portability.
