*The Dragon's Teeth* Benjamin Lai, 2016-07-14 An in-depth look at the past, present, and future of China's military. When Mao Zedong proclaimed the People's Republic of China in 1949, China was a poor and wrecked society after years of continuous wars. For centuries, in fact, China had been seen as a sort of plunder-zone to be invaded, and then a backwater until the late 1980s—when domestic policy brought about monumental changes. The result is that China has grown to be the second largest economy in the world, and its military has grown proportionately. Successive decades of economic growth have transformed China—in addition to the weapons revolution during the computer age—so that the People's Liberation Army (PLA) has become a modern fighting force. No longer having to rely on massed infantry attacks, it now features a formidable arsenal, including nuclear submarines, ICBMs, stealth fighters, and modern battle tanks. Perhaps ominously for other maritime powers, the Chinese have also focused on beyond-the-horizon missile technology, as well as antiaircraft systems, and have explored the possibilities of cyber-warfare. What is today's PLA really like? What are its traditions and histories, and how is it armed and equipped? How does it

recruit and train? This book describes some of the lesser-known battles and wars the Chinese have undertaken and the development of their key weapons systems. The United States, having opened the door to drone warfare, has had an attentive audience for such technologies in Beijing. The last chapter provides thoughts on how the Chinese view matters of security. It is not yet known whether foreign powers can still enforce their territorial wills on China—but future attempts will meet an increased challenge.

**Chinese Strategy and Military Modernization in 2015** Anthony H.

Cordesman, Steven Colley, 2016-01-12 China's emergence as a global economic superpower, and as a major regional military power in Asia and the Pacific, has had a major impact on its relations with the United States and its neighbors. China was the driving factor in the new strategy the United States announced in 2012 that called for a "rebalance" of U.S. forces to the Asia-Pacific region. At the same time, China's actions on its borders, in the East China Sea, and in the South China Sea have shown that it is steadily expanding its geopolitical role in the Pacific and having a steadily increasing impact on the strategy and military developments in other Asian powers.

**China's Military Modernization** Richard D. Fisher, Jr., 2008-09-30 China's rise to global economic and strategic eminence, with the potential for achieving pre-eminence in the greater-Asian region, is one of the defining characteristics of the post-Cold War period. This work offers a basic

understanding of the military-strategic basis and trajectory of a rising China, provides background, and outlines current and future issues concerning China's rise in strategic-military influence. The next decade may witness China's assertion of military or strategic pressure on Japan, the Korean Peninsula, India, the South China Sea, the Taiwan Strait, Central Asia, or even on behalf of future allies in Africa and Latin America. While conflict is not a foregone conclusion, as indicated by China's increasing participation in many benign international organizations, it is a fact that China's leadership will pursue its interests as it sees them, which may not always coincide with those of the United States, its friends, and allies. Until now, no single volume has existed that provides an authoritative, comprehensive, and concise description of China's evolving geo-strategy or of how China is transforming its military to carry out this strategy. Fisher examines how China's People's Liberation Army (PLA) remains critical to the existence of the Chinese Communist government and looks at China's political and military actions designed to protect its expanded strategic interests in both the Asia-Pacific and Central to Near-Asian regions. Using open sources, including over a decade of unique interview sources, Fisher documents China's efforts to build a larger nuclear force that may soon be protected by missile defenses, modern high technology systems for space, air, and naval forces, and how China is now beginning to assemble naval, air, and ground forces for future power projection missions. His work also examines how the United

States and other governments simultaneously seek greater engagement with China on strategic concerns, while hedging against its rising power. Although China faces both internal and external constraints on its rise to global eminence, it cannot be denied that China's government is pursuing a far-reaching strategic agenda.

*Chinese Tanks & AFVs* Martin J. Dougherty,2019-08-14 China today has by far the largest number of armored fighting vehicles in the world, and this detailed reference explores the main battle tanks, AFVs, armored personnel carriers, self-propelled guns, and missile-launching platforms in service since 1945, with an emphasis on the latest technology. They're organized historically by type, and illustrated with expert profile artworks for each entry and complete with technical specifications.

*The Pentagon Wars* James G Burton,2014-02-15 From the late 1960s through the mid-1980s, a small band of military activists waged war against corruption in the Pentagon, challenging a system they believed squandered the public's money and trust. The book examines the movement and its proponents and describes how the system responded to the criticisms and efforts to change accepted practices and entrenched ways of thinking. The author, an air force colonel and part of the movement, worked in the pentagon for fourteen years.

He presents a view of the Department of Defense that only an insider could offer. He exposes serious flaws in the military policy-making process, particularly in weapons development and procurement. The details he gives on the unrelenting push for high-tech weapons, despite their ineffectiveness and extraordinary cost-overruns, provide a strong case for the charge of ethical bankruptcy. The second half of the book deals with the author's attempts to get frontline equipment tested under combat conditions. For the first time, readers learn the nasty details of his battle with the army over line-fire testing of the Bradley Fighting Vehicle—a battle that he eventually won, leading to the personnel carrier's redesign and the saving of many lives. Never reluctant to name names and reveal details, James G. Burton presents a forceful case. And his revelations offer insights not found elsewhere into the motivations and actions of the people who wield power from within. Nor does he stop at the walls of the Pentagon. In his epilogue he tells what happened in the field during the final hours of the Gulf War that allowed Hussein's elite Republican Guard to escape. Now back in print after having inspired a feature HBO film, this explosive account of insider corruption is sure to serve policy-makers for generations to come.
