Circular Design for Zero Emission Architecture and Building Practice Marwa Dabaieh, 2022-12-03

Circular Design for Zero Emission Architecture and Building Practice: It is the Green Way or the Highway presents the main concepts of circular architecture and building design, focusing on emerging trends in zero-emission buildings, particularly zero- and minus- carbon practice. The book is structured around practical design solutions, including research-based passive solutions for extreme climates. It discusses passive and low carbon cooling and heating and natural ventilation, lifecycle assessment and life-cost analysis. The book presents examples and case studies from innovative low-tech to high-tech approaches, covering a wide spectrum of climate zones to show lessons learned and proof of concept. Vulnerable groups of people such as climate refugees are discussed, alongside how vernacular architecture can help introduce practical methods into low-carbon building practices. This book presents theoretical and practical coverage of circular design for zero emission architecture and building in relation to the global challenges of climate change and extreme weather. Presents key concepts of circular architecture and building design Offers practical design solutions, including solutions for extreme climates Gives practical solutions for design resilience, construction climate mitigation, adaptive behavior, building resilience and environmental impact Considers vernacular, tradition and locale-based, climate response and

adaptive approaches to sustainable building and design Discusses the application of design after disasters and extreme climate events Gives practical case studies of both low- and high-tech design solutions from across climate zones

The Solidarity Solution Kristi A. Olson, 2020 As both the leftist political philosopher G.A. Cohen and the conservative economist Milton Friedman have pointed out, equal income is unfair to the hardworking. The ideal tax system-the one used to evaluate actual tax systems-would thus adjust taxation and redistribution for differential labor burdens. Measuring labor burdens, however, is no easy task. Some philosophers and economists attempt to sidestep the measurement problem by invoking envy-freeness. A distribution is envy-free when no one prefers someone else's bundle of goods (or bads) to her own. Yet, eliminating envy in the labor market is not always possible, and minimizing envy when it cannot be eliminated is not always fair. *The Solidarity Solution* provides an answer: fair labor-income bundles are those that could be justified to free and equal individuals. Part one develops the solidarity solution by showing how rigorous distributive implications can be derived from a relational ideal. Part two uses the solidarity solution to critique the competing theories of fair income distributions of Ronald Dworkin, Philippe Van Parijs, and Marc Fleurbaey. Finally, part three identifies implications for the gender wage gap and taxation--

Nonlinear Labor Market Dynamics Michael

Neugart, 2012-12-06 Nonlinear Labor Market Dynamics discusses adjustment processes in labor markets. Contrary to linear-stochastic approaches this book is based on a non-linear deterministic framework. It is shown that even textbook-like-models of the labor market can generate long lasting adjustment processes, local instabilities, and chaotic movements, once nonlinear relationships and widely accepted adjustment rules are introduced. Thus, labor market dynamics may have an endogenous component that is governed by a nonlinear deterministic core. Of course, all results are tied to the particular models discussed in this book. Nevertheless, these models imply that by incorporating nonlinear relationships, one may arrive at an explanation of labor market behavior where linear stochastic approaches fell. Time series studies for German labor market data support this point of view.

Proceedings of the International Symposium for Production Research 2018 Numan M. Durakbasa, M. Günes Gencyilmaz, 2018-08-14 The conference aims at forming a unique platform to bring together academicians and practitioners from industrial engineering and management engineering as well as from other disciplines working on production function applying the tools of operational research and production/operational management. Topics treated include: computer aided manufacturing, industry 4.0, big data and analytics, flexible manufacturing systems, fuzzy logic, industrial applications, information technologies in production management,

optimization, production economy, production planning and control, productivity and performance management, project management, quality management, risk analysis and management, supply chain management.

The Oxford Handbook of Karl Marx Matt Vidal, Tony Smith, Tomás Rotta, Paul Prew, 2019-03-26 Karl Marx is one of the most influential writers in history. Despite repeated obituaries proclaiming the death of Marxism, in the 21st century Marx's ideas and theories continue to guide vibrant research traditions in sociology, economics, political science, philosophy, history, anthropology, management, economic geography, ecology, literary criticism, and media studies. Due to the exceptionally wide influence and reach of Marxist theory, including over 150 years of historical debates and traditions within Marxism, finding a point of entry can be daunting. The Oxford Handbook of Karl Marx provides an entry point for those new to Marxism. At the same time, its chapters, written by leading Marxist scholars, advance Marxist theory and research. Its coverage is more comprehensive than previous volumes on Marx in terms of both foundational concepts and state-of-the-art empirical research on contemporary social problems. It also provides equal space to sociologists, economists, and political scientists, with substantial contributions from philosophers, historians, and geographers. The Oxford Handbook of Karl Marx consists of six sections. The first section, Foundations, includes chapters that cover the foundational concepts and theories that constitute

the core of Marx's theories of history, society, and political economy. This section demonstrates that the core elements of Marx's political economy of capitalism continue to be defended, elaborated, and applied to empirical social science and covers historical materialism, class, capital, labor, value, crisis, ideology, and alienation.

Additional sections include Labor, Class, and Social Divisions; Capitalist States and Spaces; Accumulation, Crisis, and Class Struggle in the Core Countries; Accumulation, Crisis, and Class Struggle in the Peripheral and Semi-Peripheral Countries; and Alternatives to Capitalism.

Tools for Land Use Analysis on Different Scales

Bas Bouman, 2013-12-19 This book reflects the results of more than ten years of cooperative research involving Wageningen Agricultural University (y. l AU) in the Netherlands, the Tropical Agricultural Research and Higher Education Center (CATIE; Centro Agronómico Tropical de Investigación y Enseñanza) in Costa Rica and the Costa Rican Ministry of Agriculture and Livestock (MAG; Ministerio de Agricultura y Ganadería) as part of the Research Program on Sustainability in Agriculture (REPOSA) in the Central American country. The type of cooperation was unusual as it focused on both research and the education of students undertaking either M. Sc. thesis projects or a program of practical training in the various aspects of studying land use. Since funding was provided by W AU, a high degree of scientific autonomy was created that has clearly benefited the independent, scientific rigor of the work. Over the ten-year period, the program has

changed from being a patchwork of various insulated specialist projects, into a truly interdisciplinary effort, leading to the development of innovative tools for analyzing land use on a number of geographical scales. These tools are presented in this book. Besides CATIE and MAG, cooperation with other Costa Rican partner institutions has been essential from the beginning, and this process of interaction has also evolved considerably over time.

Economic Development Of Roc And The Pacific Rim In The 1990s And Beyond Lawrence R Klein, Chuan-tao Yu, 1994-11-15 With the Taiwan experience as background, the major theme of this conference is to examine prospective economic development of Taiwan in the 1990s and beyond, together with discussions of the economic development of other countries in the Pacific Rim. Scholars from the United States like Lawrence R Klein (Pennsylvania), Gustav Ranis and John C H Fei (Yale), Lawrence J Lau (Stanford) and Hugh Patrick (Columbia); Chikashi Moriguchi, Mitsuo Saito, Shinichi Ichimura and Hisao Kanamori from Japan; and many others including Dr Samuel C Shieh, President of the Central Bank and Dr Shirley Kuo W Y, Chairperson of the Council for economy, contributed papers. Special guest speakers included President Lee Teng-Hui and Premier Hau Pei-Tsun.

The Process Genre Salomé Aguilera Skvirsky, 2020-03-20 From IKEA assembly guides and "hands and pans" cooking videos on social media to Mister Rogers's classic factory tours, representations of the step-by-step fabrication of

objects and food are ubiquitous in popular media. In *The Process Genre* Salomé Aguilera Skvirsky introduces and theorizes the process genre—a heretofore unacknowledged and untheorized transmedial genre characterized by its representation of chronologically ordered steps in which some form of labor results in a finished product. Originating in the fifteenth century with machine drawings, and now including everything from cookbooks to instructional videos and art cinema, the process genre achieves its most powerful affective and ideological results in film. By visualizing technique and absorbing viewers into the actions of social actors and machines, industrial, educational, ethnographic, and other process films stake out diverse ideological positions on the meaning of labor and on a society's level of technological development. In systematically theorizing a genre familiar to anyone with access to a screen, Skvirsky opens up new possibilities for film theory.

Can Transfers and Behavior Change Communication Reduce Intimate Partner Violence Four Years Post-program? Experimental Evidence from Bangladesh
Shalini Roy, Melissa Hidrobo, John Hoddinott, Bastien Koch, Akhter Ahmed, 2019-10-02 Little is known about whether reductions in intimate partner violence (IPV) from cash transfer programs persist over the longer term. Using a randomized controlled trial design, we show that a program providing poor women in rural Bangladesh with cash or food transfers, alongside nutrition behavior change communication (BCC), led to sustained reductions in IPV 4 years after the program ended. Transfers

alone showed no sustained impacts on IPV. Evidence suggests cash and BCC led to more sustained impacts on IPV than food and BCC – through persistent increases in women’s bargaining power, men’s costs of perpetrating violence, and poverty-related emotional well-being.

Dynamic Optimization and Mathematical Economics

Pan-Tai Liu, 2013-03-09 As an outgrowth of the advancement in modern control theory during the past 20 years, dynamic modeling and analysis of economic systems has become an important subject in the study of economic theory. Recent developments in dynamic utility, economic planning, and profit optimization, for example, have been greatly influenced by results in optimal control, stabilization, estimation, optimization under conflicts, multi criteria optimization, control of large-scale systems, etc. The great success that has been achieved so far in utilizing modern control theory in economic systems should be attributed to the effort of control theorists as well as economists. Collaboration between the two groups of researchers has proven to be most successful in many instances; nevertheless, the gap between them has existed for some time. Whereas a control theorist frequently sets up a mathematically feasible model to obtain results that permit economic interpretations, an economist is concerned more with the fidelity of the model in representing a real world problem, and results that are obtained (through possibly less mathematical analysis) are due largely to economic insight. The papers appearing in this volume are divided into three parts. In Part I there are five

papers on the application of control theory to economic planning. Part II contains five papers on exploration, exploitation, and pricing of extractive natural resources. Finally, in Part III, some recent advances in large-scale systems and decentralized control appear.

Class and News Don Heider, 2004 News as a cultural product has earned a place in scholarly research over the past several decades, and media scholars and sociologists have successfully looked at news for ideological content and how news may shape an audience's ideas on politics, gender, and race. But how does news influence an audience's ideas about social structure? Class and News is a multidisciplinary collection of essays examining how the news media treats or neglects this structure in everyday reporting. Are certain stories chosen for their appeal to the upper or middle classes? Are stories of interest to lower class readers/viewers avoided? How are issues of social order reported or reflected in stories that aren't about class? This in-depth work will be a valuable resource for students, scholars, and general readers interested in the dynamics of class and news in the United States.

Modern Macroeconomics Sanjay K. Chugh, 2015-10-16

A textbook that approaches modern macroeconomics through its microeconomic foundations, with an emphasis on financial market connections and policy applications. The modern study and analysis of macroeconomics begins by considering how microeconomic units—consumers and firms—make decisions, and then investigates how these choices interact to yield economy-wide outcomes. This innovative textbook takes this “modern” approach, teaching macroeconomics through its microeconomic foundations. It does so by adopting the representative agent paradigm. By modeling the representative consumer and the representative firm, students will learn to describe macroeconomic outcomes and consider the effects of macroeconomic policies. Unique in its coverage of monopolistic competition, financial markets, and the interaction of fiscal and monetary policy, Modern Macroeconomics is suitable for use in intermediate undergraduate, advanced undergraduate, and graduate level courses. The book first introduces the building blocks of macroeconomics, the heart of which is the representative consumer. It goes on to offer a brief history of macroeconomic thought, including supply-side economics, the Phillips curve, and the New Keynesian framework. It then covers two policy applications, monetary policy and the interaction of monetary and fiscal policy; optimal policy analysis for both the flexible price and the rigid price case; long-run steady states, treating the Solow growth framework and the neoclassical growth model; a search-and-matching framework for the analysis of unemployment; and the application of

the tools of modern macroeconomics to “open economy,” or international macroeconomics. End-of-chapter problem sets enable students to apply the concepts they have learned. A separate Solutions Manual will be available for students to purchase. Teaching materials, including complete solutions and slides, will be available to qualified instructors.

Fairness, Responsibility, and Welfare Marc Fleurbaey, 2008-06-26 What is a fair distribution of resources and other goods when individuals are partly responsible for their achievements? This book develops a theory of fairness incorporating a concern for personal responsibility, opportunities and freedom. With a critical perspective, it makes accessible the recent developments in economics and philosophy that define social justice in terms of equal opportunities. It also proposes new perspectives and original ideas. The book separates mathematical sections from the rest of the text, so that the main concepts and ideas are easily accessible to non-technical readers. It is often thought that responsibility is a complex notion, but this monograph proposes a simple analytical framework that makes it possible to disentangle the different concepts of fairness that deal with neutralizing inequalities for which the individuals are not held responsible, rewarding their effort, respecting their choices, or staying neutral with respect to their responsibility sphere. It dwells on paradoxes and impossibilities only as a way to highlight important ethical options and always proposes solutions and reasonable compromises among the

conflicting values surrounding equality and responsibility. The theory is able to incorporate disincentive problems and is illustrated in the examination of applied policy issues such as: income redistribution when individuals may be held responsible for their choices of labor supply or education; social and private insurance when individuals may be held responsible for their risky lifestyle; second chance policies; the measurement of inequality of opportunities and social mobility.

Infinite Wealth Barry Carter, 2012-09-11 With advances in information technology people are being empowered to connect, collaborate, create wealth and self-order without bureaucracy or representative government. Infinite Wealth shows how the frantic change within organizations is part of a process of creating a new type of wealth creation enterprise enabled through the Internet. Infinite Wealth illuminates our environment, allowing us to clearly see the big picture and how the individual pieces of today's activity fit into a coherent new worldview, thus making sense of today's chaos. This revolutionary synthesis empowers you to understand what is occurring and to make effective personal choices regarding your work and life.
