A grammar of Japhug Guillaume Jacques, 2021 Japhug is a vulnerable Gyalrongic language, which belongs to the Trans-Himalayan (Sino-Tibetan) family. It is spoken by several thousand speakers in Mbarkham county, Rngaba district, Sichuan province, China. This grammar is the result of nearly 20 years of fieldwork on one variety of Japhug, based on a corpus of narratives and conversations, a large part of which is available from the Pangloss Collection. It covers the whole grammar of the language, and the text examples provide a unique insight into Gyalrong culture. It was written with a general linguistics audience in mind, and should prove useful not only to specialists of Trans-Himalayan historical linguistics and typologists, but also to anthropologists doing research in Gyalrong areas. It is also hoped that some readers will use it to learn Japhug and pursue research on this fascinating language in the future.

Orthogonal Polynomials on the Unit Circle Barry Simon, 2009-08-05 This two-part book is a comprehensive overview of the theory of probability measures on the unit circle, viewed especially in terms of the orthogonal polynomials defined by those measures. A major theme involves the connections between the Verblunsky coefficients (the coefficients of the recurrence equation for the orthogonal polynomials) and the measures, an analog of the spectral theory of one-dimensional Schrodinger operators. Among the topics discussed along the way are the asymptotics of Toeplitz determinants (Szego's theorems), limit theorems for the density of the zeros of orthogonal polynomials, matrix representations for multiplication by z (CMV matrices), periodic Verblunsky coefficients from the point of view of meromorphic functions on hyperelliptic surfaces, and connections between the theories of orthogonal polynomials on the unit circle and on the real line.

Handbook of Medical Imaging, 2000-10-09 In recent years, the remarkable advances in medical imaging instruments have increased their use considerably for diagnostics as well as planning and follow-up of treatment. Emerging from the fields of radiology, medical physics and engineering, medical imaging no longer simply deals with the technology and interpretation of radiographic images. The limitless possibilities presented by computer science and technology, coupled with engineering advances in signal processing, optics and nuclear medicine have created the vastly expanded field of medical imaging. The Handbook of Medical Imaging is the first comprehensive compilation of the concepts and techniques used to analyze and manipulate medical images after they have been generated or digitized. The Handbook is organized in six sections that relate to the main functions

needed for processing: enhancement, segmentation, quantification, registration, visualization as well as compression storage and telemedicine. *
Internationally renowned authors(Johns Hopkins, Harvard, UCLA, Yale, Columbia, UCSF) * Includes imaging and visualization * Contains over 60 pages
of stunning, four-color images

Geomechanical Processes and Their Assessment in the Rock Massifs in Central Kazakhstan Khaini-Kamal Kassymkanova,Gulnara
Jangulova,Gulnura Issanova,Venera Turekhanova,Yermek Zhalgasbekov,2019-12-02 This book focuses on the mineral deposits from the mining
complex of Kazakhstan, including copper ores from the Nikolayevsky and Shemonaiikhinsky open-pit quarries, and from the Kazchrome and Konyrat
mines in Balkhash. This study assesses the geomechanical conditions of the rock massive, as well as strengthening and reinforcing processes. It
develops methods for their assessment and provides detailed instructions on applying the methods. The book also summarizes the latest research and
developments in formulating cement solutions to reinforce slopes and suppress dust on the roads of the quarry. The book's overarching goal is to
promote geological and mining engineering conditions that ensure the ecologically safe development of the mineral resource fields. Given its scope, the
book will be of interest to mining engineers, researchers, and students in a broad range of geomechanical, geodesic, mining and environmental fields.

Asymptotics for Associated Random Variables Paulo Eduardo Oliveira,2012-01-11 The book concerns the notion of association in probability and
statistics. Association and some other positive dependence notions were introduced in 1966 and 1967 but received little attention from the probabilistic
and statistics community. The interest in these dependence notions increased in the last 15 to 20 years, and many asymptotic results were proved and
improved. Despite this increased interest, characterizations and results remained essentially scattered in the literature published in different journals. The

goal of this book is to bring together the bulk of these results, presenting the theory in a unified way, explaining relations and implications of the results. It will present basic definitions and characterizations, followed by a collection of relevant inequalities. These are then applied to characterize almost sure and weak convergence of sequences of associated variables. It will also cover applications of positive dependence to the characterization of asymptotic results in nonparametric statistics. The book is directed towards researchers in probability and statistics, with particular emphasis on people interested in nonparametric methods. It will also be of interest to graduate students in those areas. The book could also be used as a reference on association in a course covering dependent variables and their asymptotics. As prerequisite, readers should have knowledge of basic probability on the reals and on metric spaces. Some acquaintance with the asymptotics of random functions, such as empirical processes and partial sums processes, is useful but not essential.

Management of Multimedia Networks and Services Jordi Dalmau Royo,Go Hasegawa,2005-10-17 We are delighted to present the proceedings of the 8th IFIP/IEEE International Conference on Management of Multimedia Networks and Services (MMNS 2005). The MMNS 2005 conference was held in Barcelona, Spain on October 24–26, 2005. As in previous years, the conference brought together an international audience of researchers and scientists from industry and academia who are researching and developing state-of-the-art management systems, while creating a public venue for results dissemination and intellectual collaboration. This year marked a challenging chapter in the advancement of management systems for the wider management research community, with the growing complexities of the “so-called” multimedia over Internet, the proliferation of alternative wireless networks (WLL, WiFi and WiMAX) and 3G mobile services, intelligent and high-speed networks scalable multimedia services and the convergence of computing and communications for data, voice and video delivery. Contributions from the research community met this challenge with 65 paper submissions; 33 high-quality papers were subsequently selected to form the MMNS 2005 technical program. The diverse topics in this year’s program

included wireless networking technologies, wireless network applications, quality of services, multimedia, Web applications, overlay network management, and bandwidth management.

Algebraic Geometry Dan Abramovich, Ludmil Katzarkov, 2009 Offers information on various technical tools, from jet schemes and derived categories to algebraic stacks. This book delves into the geometry of various moduli spaces, including those of stable curves, stable maps, coherent sheaves, and abelian varieties. It describes various advances in higher-dimensional birational geometry.

Spannungsfeld Hochwasserrückhaltung und Trinkwassergewinnung Dirk Kühlers, Ekkehart Bethge, Michael Fleig, 2014-08-18 Viele Talauen sind sowohl für die Gewinnung von Trinkwasser aus Grundwasser, als auch für die Schaffung von Hochwasserrückhalteräumen geeignet. Im vorliegenden Leitfaden werden die Prozesse des Stofftransports von der fließenden Welle über den Retentionsraum bis zu den Entnahmebrunnen eines Wasserwerks vorgestellt. Es wird deren Einfluss auf ein höheres Risiko der Verunreinigung der Grundwasserressource durch den Eintrag von Schadstoffen aus den Retentionsräumen diskutiert.

Marine Technology and Transportation T. Graczyk, 1995 Changes in international trade have had significant effects on the economics of marine transportation, and will continue to do so into the 21st century. This is compounded by the role of technological change and these consequent uncertainties have necessitated a review of advances in marine transportation. Marine technology, particularly the area of ship design, building and operation, is experiencing rapid changes in a more competitive world market. For any industry to remain competitive, it is of the utmost importance that new technologies are not only developed, but rapidly incorporated and put into use.
