OKSNAR - Fully Assembled State - Soviet nuclear weapons in Hungary 1961-1991 László Becz, Szabolcs Kizmus, Tamás Várhegyi, 2019-11-01 The concept of using nuclear weapons in an armed conflict during the Cold War stemmed from the Soviet Union's military doctrine. Although the strategic plans of the Soviets have not been made public, we can certainly say that it was an offensive doctrine. To serve this doctrine, nuclear weapons found their way into Hungary in 1961 when the Southern Group of the Soviet Armed Forces stationed in Hungary acquired aircraft that was capable of carrying such weapons. It was at that time that the first permanent and well-secured storage site for nuclear bombs was built, then several followed through the next decades. The Southern front of the Soviet and Hungarian combined nuclear forces and warhead inventories were more than adequate for a successful and massive tactical nuclear strikes. The authors spent nearly 10 years to collect and analyze information, documents, and photographic evidence about nuclear weapons in Hungary. Their book is focused not only on nuclear weapons but their delivery systems, storages and military units which were connected to nuclear weapons in Hungary. Also, focusing on the political decisions, Warsaw Pact plans and how many nuclear warheads could be stationed in Hungary between 1961-1991. The book contains 650 photos, 3D renders and drawings including many unpublished photographs.

Growth And Inflation In The Soviet Economy

Fyodor I Kushnirsky, 2019-09-10 While growth figures are high for Soviet industry in general, they are especially impressive for the MBMW sector which has far outperformed other sectors of the economy. The question widely debated in the U.S.S.R. now is whether these impressive figures

actually reflect the growth of physical output. To put it differently, did the Soviet economy receive more machines and equipment as a result of this growth, and, if so, was the rate of real growth the same as the growth in value terms? But why would one raise such a question in the first place? To answer this and similar questions, the procedures of Soviet measurement of output, productivity, costs and prices have been analyzed in this study. Special attention is given to the processes of planning quality improvements and pricing new technological items. An analysis of procedures and methodological instructions used in planning and pricing MBMW products may be helpful in revealing possible discrepancies between prices of new goods and their quality characteristics.

The Gatekeeper Donald Peters, 2019-11-15 The CIA has a problem. One of its senior members - an Assistant Deputy Director of Intelligence (ADDI) - is suspected of being involved in drug trafficking. The Assistant Inspector General of the CIA cannot use his own staff to investigate out of fear that the ADDI will be alerted. He also must keep the whole matter contained because he does not know how many other people are involved, or at what level in the intelligence and security services drug use has penetrated. So, he gets his son Mark Taylor, with the assistance of the DEA, to follow the ADDI on a trip to Afghanistan to find the truth. That mission proves to be deadly for some, and Mark himself becomes the target. The story involves the Russian Foreign Intelligence Service who are trying to protect a mole in the US, the British MI6 who will not commit to what they know, and the US FBI who have an agent on the case. In the complex world of the intelligence and security services the actions of a few has a major impact on the personal lives of the major players.

Combat Engineering Equipment of the Warsaw Pact
Russell Phillips, 2017-11-07 The ability to advance rapidly over sometimes difficult terrain was a key part of the Warsaw Pact's strategy. The Eastern European nations which formed this historic alliance wanted to be able to move quickly and effectively so they didn't give their enemies an advantage. The vital tools which helped the Warsaw Pact overcome the challenges it faced included a whole range of combat engineering equipment. This book is a factual reference of the equipment which was used throughout the Cold War period and the important roles each piece played. With obstacles including rivers and minefields to negotiate, combat units could have faced costly delays if it hadn't been for the diligent work of the Warsaw Pact's engineers. Refusing to allow troops to be slowed down by the landscape, these combat engineers worked in sometimes challenging conditions to find safe routes to their destination. From building bridges and clearing safe lanes through minefields to repairing and recovering broken down vehicles and creating field fortifications, the work of these engineers played an essential part in the Warsaw Pact's military strategy. But the work of this effective force would have been impossible without the specialist engineering equipment they used. Rugged, simplistic compared to their Western equivalents, these items would play a crucial part in both peacetime military exercises and combat operations in Afghanistan.
