*The Impact of Regional Liberalization and Harmonization in Road Transport Services: a Focus on Zambia and Lessons for Landlocked Countries.* Gael Raballand, 2008 Abstract: Based on a detailed empirical study, this paper argues that regional liberalization of trucking services has had an important effect on transport costs and tariffs for Zambia's economy. Zambia is a peculiar example in Southern Africa as it benefits from relatively low transport costs compared with other landlocked countries in Africa. This is mainly because of competition between Zambian and other regional, mainly South African, operators and because of South African investments in Zambia's trucking industry. As a result, the costs of operators registered in Zambia and South Africa are similar. The study also demonstrates that enhancing trucking interoperability in Southern Africa would significantly impact positively the Zambian trucking industry's competitiveness. The main measures to significantly increase trucking competitiveness in the region would more likely derive from reducing fuel costs in Zambia, improving border-post operations, and relaxing South African truck import rules.

*Save and Grow - A technical guide to agricultural practices in Zambia* Food and Agriculture Organization of the United Nations, 2021-10-14 This guide has been developed for extension officers in both the public and the private, including those interested in agricultural development in Zambia. The goal of this manual is to serve as a tool that allows readers to access up to date information about various agricultural practices and their advantages and disadvantages. There are many organisations in Zambia that have programs that aim towards sustainable development in the agricultural sector. Amongst these programs, there are many different approaches to the goal of improving livelihoods. Although these various programs have good reasons for promoting their specific methods, this manual aims to take an independent stance to portray what all of them offer and why. This manual also includes significant information about new approaches and traditional farmer practices or conventional farming methods. The central theme in this manual is that there can never be only one way to achieve a goal under such diverse conditions as are found in agriculture. Although a certain amount of benefit can be gained by rigid guidelines to agricultural practice (for example a specific crop spacing, tillage method or fertilizer recommendation), the diverse factors that affect peoples' decisions relate to economic, social and environmental conditions make such guidelines impractical in many cases.

*Cryptography for Payment Professionals* Ilya Dubinsky, 2023-05-10 Although cryptography plays an essential part in most modern solutions, especially in payments, cryptographic algorithms remain a black box for most users of these tools. Just as a sane backend developer does not drill down into low-level disk access details of a server filesystem, payments professionals have enough things to worry about before they ever need to bother themselves with debugging an encrypted value or a message digest. However, at a certain point, an engineer faces the need to identify a problem with a particular algorithm or, perhaps, to create a testing tool that would simulate a counterpart in a protocol that involves encryption. The world of cryptography has moved on with giant leaps. Available technical standards mention acronyms and link to more standards, some of which are very large while others are not available for free. After finding the standards for the algorithm, the specific mode of operation must also be identified. Most implementations use several cryptographic primitives—for example, key derivation with a block cipher, which produces a secret that is used together with a hash function and a double padding scheme to produce a digital signature of a base64-encoded value. Understanding this requires more sifting through online sources, more reading of platform and library documents, and finally, when some code can be written, there are very few test cases to validate it. *Cryptography for Payment Professionals* is intended for technical people, preferably with some background in software engineering, who may need to deal with a cryptographic algorithm in the payments realm. It does not cover the payment technology in-depth, nor does it provide more than a brief overview of some regulations and security standards. Instead, it focuses on the cryptographic aspects of each field it mentions. Highlights include: Major cryptographic algorithms and the principles of their operation Cryptographic aspects of card-present

(e.g., magnetic stripe, EMV) and online (e.g., e-Commerce and 3DS 2.0) transactions A detailed description of TDES DUKPT and AES DUKPT protocols, as well as an example implementation and test cases for both It is best if the reader understands programming, number and string representations in machine memory, and bit operations. Knowledge of C, Python, or Java may make the examples easier to read but this is not mandatory. *Sustainable bioenergy potential in Zambia* Food and Agriculture Organization of the United Nations ,Ministry of Energy of Zambia,2021-04-30 Zambia is richly endowed with a wide range of biomass sources including woodlands, forests, agricultural residues and livestock waste. Biomass energy contributes supplies over 70 percent of the country's energy needs. Due to the current extraction and consumption methods, the use of biomass energy has been linked with detrimental environmental effects such as deforestation and forest degradation as well as climate change, due to the loss of carbon sinks. Inefficient utilisation of biomass contributes significantly to deforestation which is estimated at between 79 000 – 150 000 ha per year, and negatively affects the health and income of rural households that depend on forest products for their livelihoods. Sustainable bioenergy strategies and alternative bioenergy solutions need to be defined and integrated into current efforts of the country to increase stable and sustainable access to energy. This report assesses the country context and defines which bioenergy options can be viable considering a number of solutions for electricity production, cooking fuels and transport fuels at the provincial and district level. Possible options originating from crop residues, livestock residues and forest plantation harvesting residues are identified, having netted out agriculture and forestry needs. The assessment now needs to be followed by local verification and investment to deploy an initial set of bioenergy projects and test the findings on the ground.

**Optimal Transport** Gershon Wolansky,2021-01-18 The series is devoted to the publication of high-level monographs which cover the whole spectrum of current nonlinear analysis and applications in various fields, such as optimization, control theory, systems theory, mechanics, engineering, and other sciences. One of its main objectives is to make available to the professional community expositions of results and foundations of methods that play an important role in both the theory and applications of nonlinear analysis. Contributions which are on the borderline of nonlinear analysis and related fields and which stimulate further research at the crossroads of these areas are particularly welcome. Making Insurance Work for Microfinance Institutions Craig Farren Churchill, 2003 This how-to manual guides managers of microfinance institutions (MFIs) through the complexities of offering basic insurance products, either on their own or in partnership with an insurance company. Insurance is one solution to help low-income households and microfinance institutions to manage risks, but it is not the only solution and it is not always the best solution. This manual helps determine whether it is appropriate to offer insurance, which type of insurance product(s) to offer, and through what institutional structure.

**Poverty Reduction in the Course of African Development** Machiko Nissanke, Muna Ndulo, 2017-03-09 In light of the opportunities and the challenges facing African economies in the 21st century, this edited volume traces the evolution of poverty in the course of economic development in sub-Saharan Africa over the recent decades. By engaging with, and seeking to develop on, the work of Professor Erik Thorbecke, it examines the evolving dynamics of poverty in multiple dimensions. It also discusses how to lay down foundations for improved governance and institutions that will realize inclusive development in sub-Saharan Africa. Thus, the volume contributes to our understanding of dynamics of pro-poor growth and pro-growth poverty reduction, and to the on-going policy and academic debates on how to overcome fragility and vulnerability and secure inclusive development through socio-economic transformation in sub-Saharan Africa. The volume is divided into four parts; two overview chapters in Part 1 set out a common theme running through the volume. Four chapters in Part II examine an evolution of the poverty profile in different dimensions in sub-Saharan Africa since the new millennium. Part III presents three country case studies of tracing poverty dynamics under a country-specific institutional and policy environment. Part IV consists of three chapters, each of which addresses the question of how to advance an inclusive development agenda in sub-Saharan Africa, but from three different perspectives: structural changes, a governance framework, and an institutional foundation.

*Strategies and Priorities for African Agriculture* Xinshen Diao, James Thurlow, Samuel Benin, Shenggen Fan, 2012 In the first decade of the twenty-first century, countries within Sub-Saharan Africa reached milestones that seemed impossible only ten years ago: macroeconomic stability, sustained economic growth, and improved governance. Continuing this pattern of success will require enhancing the region's agricultural sector, in which a large proportion of poor people make a living. The authors of *Strategies and Priorities for African Agriculture: Economywide Perspectives from Country Studies* argue that, although the diversity of the region makes generalization difficult, increasing staple-crop production is more likely to reduce poverty than increasing export-crop production. This conclusion is based on case studies of ten low-income African countries that reflect varying levels of resource endowments and development stages. The authors also recommend increased, more efficient public investment in agriculture and agricultural markets and propose new directions for future research. The last ten years have been an encouraging time for one of the world's poorest regions; this book offers an analysis of how recent, promising trends can be sustained into the future.

*Foreign Direct Investment in Agriculture* Jan Schüpbach, 2015-10-07 Foreign direct investment in agriculture and land has increased substantially since the 2007-2008 food price crisis. However, there is a severe lack of quantitative evidence on its economic impact. Therefore, the primary goal of this study was to collect and analyze empirical evidence, in order to better understand the potential

benefits and pitfalls of such investments and related processes of agricultural commercialization. In particular, the study tests the effect of two strategies for including smallholder farmers into modern food supply chains: 1. Outgrower schemes, i.e. a type of contract farming whereby small-scale farmers produce crops for large-scale farming enterprises 2. Wage employment on large-scale estates The central part of the study looks at one specific investment project in the Zambian sugar cane sector. This sectoral focus was supplemented by a broader, cross sectoral analysis of a large, nationally representative panel survey. Overall, the evidence suggests that large-scale investments by foreign as well as domestic companies, and especially the model of cooperation with smallholder farmers in outgrower schemes, can indeed have positive and significant effects on the income and wealth of rural households.

**Smart Energy for Smart Transport** Eftihia G. Nathanail, Nikolaos Gavanis, Giannis Adamos, 2023-03-10 This book reports on original research and practical findings fostering sustainable and smart urban mobility transformation. Gathering contributions presented at the 6th Conference on Sustainable Urban Mobility, held from August 31 to September 2, 2022, on Skiathos Island, Greece, it covers topics relating to electric and clean energy, intelligent technologies and automation, green travel modes, and transport safety. It highlights solutions for inclusive transportation, sustainable and resilient supply chains, and describes novel strategies for urban planning and innovative transport infrastructure. This book offers extensive information to academicians, researchers, practitioners and decision makers working on effective strategies to transform urban mobility in a sustainable and equitable way.

**Transport in Nanostructures** David K. Ferry, Stephen M. Goodnick, Jonathan Bird, 2009-08-20 The advent of semiconductor structures whose characteristic dimensions are smaller than the mean free path of carriers has led to the development of novel devices, and advances in theoretical understanding of mesoscopic systems or nanostructures. This book has been thoroughly revised and provides a much-needed update on the very latest experimental research into mesoscopic devices and develops a detailed theoretical framework for understanding their behaviour. Beginning with the key observable phenomena in nanostructures, the authors describe quantum confined systems, transmission in nanostructures, quantum dots, and single electron phenomena. Separate chapters are devoted to interference in diffusive transport, temperature decay of fluctuations, and non-equilibrium transport and nanodevices. Throughout the book, the authors interweave experimental results with the appropriate theoretical formalism. The book will be of great interest to graduate students taking courses in mesoscopic physics or nanoelectronics, and researchers working on semiconductor nanostructures.
