The Dragon's Teeth Benjamin Lai,2016-07-14 An in-depth look at the past, present, and future of China's military. When Mao Zedong proclaimed the People's Republic of China in 1949, China was a poor and wrecked society after years of continuous wars. For centuries, in fact, China had been seen as a sort of plunder-zone to be invaded, and then a backwater until the late 1980s—when domestic policy brought about monumental changes. The result is that China has grown to be the second largest economy in the

world, and its military has grown proportionately. Successive decades of economic growth have transformed China—in addition to the weapons revolution during the computer age—so that the People’s Liberation Army (PLA) has become a modern fighting force. No longer having to rely on massed infantry attacks, it now features a formidable arsenal, including nuclear submarines, ICBMs, stealth fighters, and modern battle tanks. Perhaps ominously for other maritime powers, the Chinese have also focused on beyond-the-horizon missile technology, as well as anti-aircraft systems, and have explored the possibilities of cyber-warfare. What is today’s PLA really like? What are its traditions and histories, and how is it armed and equipped? How does it recruit and train? This book describes some of the lesser-known battles and wars the Chinese have undertaken and the development of their key weapons systems. The United States, having opened the door to drone warfare, has had an attentive audience for such technologies in Beijing. The last chapter provides thoughts on how the Chinese view matters of security. It is not yet known whether foreign powers can still enforce their territorial wills on China—but future attempts will meet an increased challenge.

Platonic Transformations Adriaan Theodoor Peperzak,1997 Against the widespread anti-platonism of our century, noted philosopher, Hegel, and two great postmodern thinkers, Heidegger and Levinas, transform Plato's thoughts about reality, truth, and the Good into elements of their own reflection. He then presents his own retrieval of Platonic themes and arguments, showing how fruitful a critical reexamination of Plato's work can be, even today. Anyone interested in continental philosophy, phenomenology, ethics, or

the history of philosophy should read this book.

Automotive FDI in Emerging Europe A. J. Jacobs, 2017-06-19 This book examines the dramatic increase in automotive assembly plants in the former Socialist Central European (CE) nations of Czechia, East Germany, Hungary, Poland, and Slovakia from 1989 onwards. Enticed by relatively lower-wage labour and significant government incentives, the world's largest automakers have launched more than 20 passenger car assembly complexes in CE nations, with production accelerating dramatically since 2001. As a result, the annual passenger car production in Western Europe declined by more than 20% between 2001 and 2015, and alternatively in the CEE it increased by nearly 170% during this period. Drawing on case studies of 25 current and former foreign-run assembly plants, the author presents a rare historical account of automotive foreign assembly plants in the CE following this dramatic geographic shift. This book will expand the knowledge of policy-makers in Europe in relation to their pursuits of FDI and will be of great interest to scholars and students of business, economic history, political science, and development.

It examines linear and nonlinear systems with examples of both in each chapter. Also included are some infinite-dimensional and nonsmooth examples. Throughout, emphasis is placed on the use of the dissipative properties of a system for the design of stable feedback control laws.

Führung im Zeitalter von Veränderung und Diversity Corinna von Au, 2016-11-25 Der vorliegende vierte Band der Reihe *Leadership und Angewandte Psychologie* beleuchtet organisationale Veränderungen und Diversity aus systemischer Sicht. Dabei wird deutlich, dass Organisationen nur nachhaltig erfolgreich sein können, wenn sie die Ebene der „best practice“ verlassen und das Experiment von nicht linearen Musterbrüchen à la „next practice“ eingehen. Hierbei wird das proaktive „Managen“ von größeren und tagtäglichen Veränderungen und Diversity jeglicher Art zur permanenten (Führungs-) Aufgabe.

Historical Dictionary of Heidegger's Philosophy Frank Schalow, 2019-11-29 Martin Heidegger's thinking is a complex, and his terminology is as nuanced, as any thinker in the history of philosophy. As the historian of philosophy par excellence, he also exhibits

both a greater appreciation and mastery of previous thinkers than any almost any other philosopher before or since. The Historical Dictionary of Heidegger's Philosophy, Third Edition addresses this dual challenge of reading, understanding, and interpreting Heidegger's vast writings. The book provides a comprehensive and detailed account of the key terms shaping Heidegger's philosophy, as well as outlining the development of his thought spanning the entirety of his career spanning almost sixty years. The Dictionary also includes a discussion of Heidegger's seminal writings, the spanning his entire Gesamtausgabe (Complete Edition) up through volume 99 (of the projected 102 volumes). This third edition of Historical Dictionary of Heidegger's Philosophy, Third Edition contains a chronology, an introduction, appendixes and an extensive bibliography. The dictionary section has over 800 cross-referenced entries that provides a clear and comprehensive exposition of the key developments in his life and his thought. This book is an excellent resource for students, researchers, and anyone wanting to know more about Martin Heidegger.

Light and Photosynthesis in Aquatic Ecosystems John T. O. Kirk, 1994-04-21

Penetration of light into aquatic ecosystems is greatly affected by the absorption and scattering processes that take place within the water. Thus within any water body, the intensity and colour of the light field changes greatly with depth and this has a marked influence on both the total productivity of, and the kinds of plant that predominate in, the ecosystem. This study presents an integrated and coherent treatment of the key role of light in aquatic ecosystems. It ranges from the physics of light transmission within water, through the biochemistry and physiology of aquatic photosynthesis, to the ecological

relationships which depend on the underwater light climate.
