Introduction to Information Retrieval Christopher D. Manning,Prabhakar Raghavan,Hinrich Schütze,2008-07-07 Class-tested and coherent, this textbook teaches classical and web information retrieval, including web search and the related areas of text classification and text clustering from basic concepts. It gives an up-to-date treatment of all aspects of the design and implementation of systems for gathering, indexing, and searching documents; methods for evaluating systems; and an introduction to the use of machine learning methods on text collections. All the important ideas are explained using examples and figures, making it perfect for introductory courses in information retrieval for advanced undergraduates and graduate students in computer science. Based on feedback from extensive classroom experience, the book has been carefully structured in order to make teaching more natural and effective. Slides and additional exercises (with solutions for lecturers) are also available through the book's supporting website to help course instructors prepare their lectures.

Global Trends 2040 National Intelligence Council,2021-03 The ongoing COVID-19 pandemic marks the most significant, singular global disruption since World War II, with health, economic, political, and security implications that will ripple for years to come. -Global Trends 2040 (2021) Global Trends 2040-A More Contested World (2021), released by the US National Intelligence Council, is the latest report in its series of reports starting in 1997 about megatrends and the world's future. This report, strongly influenced by the COVID-19 pandemic, paints a bleak picture of the future and describes a contested, fragmented and turbulent world. It specifically discusses the four main trends that will shape tomorrow's world: – Demographics-by 2040, 1.4 billion people will be added mostly in Africa and South Asia. – Economics-increased government debt and concentrated economic power will escalate problems for the poor and middleclass. – Climate-a hotter world will increase water, food, and health insecurity. – Technology-the emergence of new technologies could both solve and cause problems for human life. Students of trends, policymakers, entrepreneurs, academics, journalists and anyone eager for a glimpse into the next decades, will find this report, with colored graphs, essential reading.

Programming Collective Intelligence Toby Segaran,2007-08-16 Want to tap the power behind search rankings, product recommendations, social bookmarking, and online matchmaking? This fascinating book demonstrates how you can build Web 2.0 applications to mine the enormous amount of data created by people on the Internet. With the sophisticated algorithms in this book, you can write smart programs to access interesting datasets from other web sites, collect data from users of your own applications, and analyze and understand the data once you've found it. Programming Collective Intelligence takes you into the world of machine learning and statistics, and explains how to draw conclusions about user experience, marketing, personal tastes, and human behavior in general -- all from information that you and others collect every day. Each algorithm is described clearly and concisely with code that can immediately be used on your web site, blog, Wiki, or specialized application. This book explains: Collaborative filtering techniques that enable online retailers to recommend products or media Methods of clustering to detect groups of similar items in a large dataset Search engine features -- crawlers, indexers, query engines, and the PageRank algorithm Optimization algorithms that search millions of possible solutions to a problem and choose the best one Bayesian filtering, used in spam filters for classifying documents based on word types and other features Using decision trees not only to make predictions, but to model the way decisions are made Predicting numerical values rather than classifications to build price models Support vector machines to match people in online dating sites Non-negative matrix factorization to find the independent features in a dataset Evolving intelligence for problem solving -- how a computer develops its skill by improving its own code the more it plays a game Each chapter includes exercises for extending the algorithms to make them more powerful. Go beyond simple database-backed applications and put the wealth of Internet data to work for you. Bravo! I cannot think of a better way for a developer to first learn these algorithms and methods, nor can I think of a better way for me (an old AI dog) to reinvigorate my knowledge of the details. -- Dan Russell, Google Toby's book does a great job of breaking down the complex subject matter of machine-learning algorithms into practical, easy-to-understand examples that can be directly applied to analysis of social interaction across the Web today. If I had this book two years ago, it would have saved precious time going down some fruitless paths. -- Tim Wolters, CTO, Collective Intellect

The Art of the Fold Hedi Kyle,Ulla Warchol,2018-10-02 The influential artist Hedi Kyle and renowned architecture graduate Ulla Warchol shows you how to create their unique designs using folding techniques. From creating flag books and fishbones, to blizzards and nesting boxes, you'll gain an invaluable insight into the work of two skilled artists with this fun read! With the help of their thorough instructions and simple illustrations, you'll be on your way to becoming a pro paper crafter in no time at all – Sew magazine A wonderful insight into the work of a truly skilled artist – PaperCrafter The renowned and influential book artist Hedi Kyle shows you step-by-step how to create her unique designs using folding techniques in The Art of the Fold. Bookbinding and paper craft projects include flag books, blizzard books, the fishbone fold, and nesting boxes. Written by the doyenne of artists' books, Hedi Kyle, The Art of the Fold is a wonderful insight into the work of a truly skilled artist. Hedi will show you how to bind a book and fold paper to create over 35 of her cut-fold book designs. The book is beautifully illustrated with Hedi's finished works of art. An excerpt from the book: 'I can still remember the thrill I experienced when my first folded book structure emerged from my fingers – how eager I was to explore its possibilities and to share it with whoever was interested. The Flag Book, as I now call it, is a simple accordion and has interlocking pages oriented in opposite directions. Little did I know that this simple structure would have legs and be the catalyst for the next forty-plus years of thinking about and making books. The common perception of the book today is fairly straightforward: a series of pages organized around a spine and protected on either side by two covers. This format allows for easy access, storage and retrieval of information. Yet what happens when the book is stripped away of centuries of preconceptions and is allowed to reveal something else: playfulness, utility, invention? Expanding the notion of the book is what the structures in the following chapters of The Art of the Fold attempt to do. Exploring its tactile, sculptural form, primarily through folding methods, the book as a structural object is celebrated while content is considered in a new and unconventional way. My range in this medium has always been broad. In part this is due to my introduction to the world of bookbinding and some chance encounters. In the 1970s in New York City, the art and craft of hand bookbinding and papermaking were experiencing an unprecedented revival. I was fortunate to arrive in the city at just this moment. With an

art-school background and an impulse to make things, I was naturally drawn to pursue this new opportunity. The Center for Book Arts, the famous forerunner of so many centers yet to come, was located in a small storefront just down the street from where I lived on the Lower East Side of Manhattan. Under the direction of founder Richard Minsky, it had a radical mission: to push concept, materials, printing and making of artist books in a new direction. When Richard dared me to teach at the Center one evening a week, I was hooked. My career as a book conservator and a book artist has now spanned over 45 years. As head conservator at the American Philosophical Society in Philadelphia, I've had the opportunity to handle some of the rarest volumes and manuscripts in the world. I have also dealt with decrepit books, torn maps and countless curiosities discovered in stacks and archives. All were endless sources for ideas and provided a springboard for a departure from tradition. Leading book-arts workshops around the world and a 25 year tenure teaching in the graduate program for Book Arts and Printmaking at the University of the Arts in Philadelphia have shown me, in retrospect, that the more I taught, the

Folding Techniques for Designers Paul Jackson, 2011-05-02 Many designers use folding techniques in their work to make three-dimensional forms from two-dimensional sheets of fabric, cardboard, plastic, metal, and many other materials. This unique book explains the key techniques of folding, such as pleated surfaces, curved folding, and crumpling. It has applications for architects, product designers, and jewelry and fashion designers. An elegant, practical handbook, *Folding for Designers* explains over 70 techniques explained with clear step-by-step drawings, crease pattern drawings, and specially commissioned photography. All crease pattern drawings are available to view and download from the Laurence King website.

Mongolia and Northeast Asian Security Alicia J. Campi, Jagannath Panda, 2021-08-26 This book assesses Mongolia's position in the security calculus of Northeast Asia and presents the policy outlooks of major powers vis-a-vis the region, including the United States, Japan, China, Russia, and India. Ground-breaking and modernistic in its approach, the book treats the often marginalised and landlocked small power state of Mongolia as a critical regional actor, particularly with regards to managing ties with encircling major powers Russia and China and assist in engaging the nuclear state of North Korea through dialogue mechanisms. This compilation of chapters by distinguished scholars explores Mongolia in the Northeast Asian geographical space within the context of three major themes: nuclear proliferation, environmental security, and socio-economic and civilisational conflicts. The book provides a multidisciplinary and multinational approach to Mongolia's role in the region's strategic landscape. It moves the regional security discussion beyond major power politics, North Korea's denuclearisation, and the impasse on the Korean Peninsula to discuss and analyse other underappreciated challenges facing the region. Considering Mongolia's role in achieving peace and stability in the neighbourhood, the book will be a valuable resource for researchers and readers in International Relations, Political Science, and Asian Studies.

Sew & Play Puzzle Ball Animals Abby Glassenberg, 2015-09-01 A puzzle ball pattern holds a tradition of being passed down to generations of family members. Start your own tradition and create puzzle balls with personality. Made from the softest of fabrics, each stuffed animal in this collection is artfully formed from rings that fit together like puzzle pieces. And the pockets and ridges make them easy to grasp, especially for little hands. Included are an elephant, a dinosaur, a giraffe, a bunny, a bee and a lion. Make all six and delight the children in your life with these fun and fuzzy pets.

The Pentagon Wars James G. Burton, 2014-02-15 From the late 1960s through the mid-1980s, a small band of military activists waged war against corruption in the Pentagon, challenging a system they believed squandered the public's money and trust. The book examines the movement and its proponents and describes how the system responded to the criticisms and efforts to change accepted practices and entrenched ways of thinking. The author, an air force colonel and part of the movement, worked in the Pentagon for fourteen years. He presents a view of the Department of Defense that only an insider could offer. He exposes serious flaws in the military policy-making process, particularly in weapons development and procurement. The details he gives on the unrelenting push for high-tech weapons, despite their ineffectiveness and extraordinary cost-overruns, provide a strong case for the charge of ethical bankruptcy. The second half of the book deals with the author's attempts to get frontline equipment tested under combat conditions. For the first time, readers learn the nasty details of his battle with the army over line-fire testing of the Bradley Fighting Vehicle—a battle that he eventually won, leading to the personnel carrier's redesign and the saving of many lives. Never reluctant to name names and reveal details, James G. Burton presents a forceful case. And his revelations offer insights not found elsewhere into the motivations and actions of the people who wield power from within. Nor does he stop at the walls of the Pentagon. In his epilogue he tells what happened in the field during the final hours of the Gulf War that allowed Hussein's elite Republican Guard to escape. Now back in print after having inspired a feature HBO film, this explosive account of insider corruption is sure to serve policy-makers for generations to come.
