Ramanujan Srinivasa Ramanujan Aiyangar, 1995-09-07 The letters that Ramanujan wrote to G. H. Hardy on January 16 and February 27, 1913, are two of the most famous letters in the history of mathematics. These and other letters introduced Ramanujan and his remarkable theorems to the world and stimulated much research, especially in the 1920s and 1930s. This book brings together many letters to, from, and about Ramanujan. The letters came from the National Archives in Delhi, the Archives in the State of Tamil Nadu, and a variety of other sources. Helping to orient the reader is the extensive commentary, both mathematical and cultural, by Berndt and Rankin; in particular, they discuss in detail the history, up to the present day, of each mathematical result in the letters. Containing many letters that have never been published before, this book will appeal to those interested in Ramanujan's mathematics as well as those wanting to learn more about the personal side of his life. *Ramanujan: Letters and Commentary* was selected for the CHOICE list of Outstanding Academic Books for 1996.

Moon-face and Other Stories Jack London, 1906 JACK LONDON (1876-1916), American novelist, born in San Francisco, the son of an itinerant astrologer and a spiritualist mother. He grew up in poverty, scratching a living in various legal and illegal ways - robbing the oyster beds, working in a canning factory and a jute mill, serving aged 17 as a common sailor, and taking part in the Klondike gold rush of 1897. This various experience provided the material for his works, and made him a socialist. The son of the Wolf (1900), the first of his collections of tales, is based upon life in the Far North, as is the book that brought him recognition, *The Call of the Wild* (1903), which tells the story of the dog Buck, who, after his master's death, is lured back to the primitive world to lead a wolf pack. Many other tales of struggle, travel, and adventure followed, including *The Sea-Wolf* (1904), *White Fang* (1906), *South Sea Tales* (1911), and *Jerry of the South Seas* (1917). One of London's most interesting novels is the semi-autobiographical *Martin Eden* (1909). He also wrote socialist treatises, autobiographical essays, and a good deal of journalism.

Motorsport Going Global N. Henry, T. Angus, M. Jenkins, C. Aylett, 2007-07-31

This book provides the definitive economic study of the global motorsport industry. Drawing on a decade of research, and interviews with top industry executives and international commentators, the global grid of motorsport is analyzed and the world's national motorsport industries benchmarked. *Motorsport Going Global* concludes on scenarios for the global industry as it enters a new era of market growth and global opportunity.

The Business of Speed David N. Lucsko, 2008-11-03 2009 Outstanding Academic Title, Choice Since the mass production of Henry Ford's Model T, car enthusiasts have been redesigning, rebuilding, and reengineering their vehicles for increased speed and technical efficiency. They purchase aftermarket parts, reconstruct engines, and enhance body designs, all in an effort to personalize and improve their vehicles. Why do these car enthusiasts modify their cars and where do they get their aftermarket parts? Here, David N. Lucsko provides the first scholarly history of America's hot rod business. Lucsko examines the evolution of performance tuning through the lens of the \$34-billion speed equipment industry that supports it. As early

as 1910, dozens of small shops across the United States designed, manufactured, and sold add-on parts to consumers eager to employ new technologies as they tinkered with their cars. Operating for much of the twentieth century in the shadow of the Big Three automobile manufacturers—General Motors, Ford, and Chrysler—these businesses grew at an impressive rate, supplying young and old hot rodders with thousands of performance-boosting gadgets. Lucsko offers a rich and heretofore untold account of the culture and technology of the high-performance automotive aftermarket in the United States, offering a fresh perspective on the history of the automobile in America.

Yvain Chretien de Troyes, Chrétien (de Troyes), 1987-09-10 A twelfth-century poem by the creator of the Arthurian romance describes the courageous exploits and triumphs of a brave lord who tries to win back his deserted wife's love

Real NASCAR Daniel S. Pierce, 2010-04-01 In this history of the stock car racing circuit known as NASCAR, Daniel S. Pierce offers a revealing new look at the sport from its postwar beginnings on Daytona Beach and Piedmont dirt tracks through the early 1970s, when the sport spread beyond its southern roots and gained national recognition. *Real NASCAR* not only confirms the popular notion of NASCAR's origins in bootlegging, but also establishes beyond a doubt the close ties between organized racing and the illegal liquor industry, a story that readers will find both fascinating and controversial.

Kumba Africa Sampson Ejike Odum, 2020-11-03 'KUMBA AFRICA', is a compilation of African Short Stories written as fiction by Sampson Ejike Odum, nostalgically taking our memory back several thousands of years ago in Africa, reminding us about our past heritage. It digs deep into the traditional life style of the Africans of old, their beliefs, their leadership, their courage, their culture, their wars, their defeat and their victories long before the emergence of the white man on the soil of Africa. As a talented writer of rich resource and superior creativity, armed with in-depth knowledge of different cultures and traditions in Africa, the Author throws light on the rich cultural heritage of the people of Africa when civilization was yet unknown to the people. The book reminds the readers that the Africans of old kept their pride and still enjoyed their own lives. They celebrated victories when wars were won, enjoyed their New yam festivals and villages engaged themselves in seasonal wrestling contest etc; Early morning during harmattan season, they gathered firewood and made fire inside their small huts to hit up their bodies from the chilling cold of the harmattan. That was the Africa of old we will always remember. In Africa today, the story have changed. The people now enjoy civilized cultures made possible by the influence of the white man through his scientific and technological process. Yet there are some uncivilized places in Africa whose people haven't tested or felt the impact of civilization. These people still maintain their ancient traditions and culture. In everything, we believe that days when people paraded barefooted in Africa to the swamp to tap palm wine and fetch firewood from there farms are almost fading away. The huts are now gradually been replaced with houses built of blocks and beautiful roofs. Thanks to modern civilization. Donkeys and camels are no longer used for carrying heavy loads for merchants. They are now been replaced by heavy trucks and lorries. African traditional methods of healing are now been substituted by hospitals. In all these, I will always love and remember Africa, the home of my birth

and must respect her cultures and traditions as an AFRICAN AUTHOR.

The Jack Brabham Story Jack Brabham, Doug Nye, 2004-02-26 This title covers the career of Jack Brabham, which saw him win three Formula 1 Driver's World Championship titles, multiple F2 Championships, become the world's first dominant manufacturer of single-seater racing cars and the first driver to win a World Title in a car bearing his own name.

Driving Europe Frank Schipper, 2008 Today we can hardly imagine life in Europe without roads and the automobiles that move people and goods around. In fact, the vast majority of movement in Europe takes place on the road. Travelers use the car to explore parts of the continent on their holidays, and goods travel large distances to reach consumers. Indeed, the twentieth century has deservedly been characterized as the century of the car. The situation looked very different around 1900. People crossing national borders by car encountered multiple hurdles on their way. Technically, they imported their vehicle into a neighboring country and had to pay astronomical import duties. Often they needed to pass a driving test in each country they visited. Early on, automobile and touring clubs sought to make life easier for traveling motorists. International negotiations tackled the problems arising from differing regulations. The resulting volume describes everything from the standardized traffic signs that saved human lives on the road to the Europabus taking tourists from Stockholm to Rome in the 1950s. *Driving Europe* offers a highly original portrait of a Europe built on roads in the course of the twentieth century.

The World Beyond the Windshield Christof Mauch, Thomas Zeller, 2008 For better or worse, the view through a car's windshield has redefined how we see the world around us. In some cases, such as the American parkway, the view from the road was the be-all and end-all of the highway; in others, such as the Italian autostrada, the view of a fast, efficient transportation machine celebrating either Fascism or its absence was the goal. These varied environments are neither necessary nor accidental but the outcomes of historical negotiations, and whether we abhor them or take delight in them, they have become part of the fabric of human existence. *The World beyond the Windshield: Roads and Landscapes in the United States and Europe* is the first systematic, comparative look at these landscapes. By looking at examples from the United States and Europe, the chapters in this volume explore the relationship between the road and the landscape that it traverses, cuts through, defines, despoils, and enhances. The authors analyze the Washington Beltway and the Blue Ridge Parkway, as well as iconic roads in Italy, Nazi Germany, East Germany, and Great Britain. This is a story of the transatlantic exchange of ideas about environment and technology and of the national and nationalistic appropriations of such landscaping.

Foundations of Logic and Mathematics Yves Nievergelt, 2012-12-06 This modern introduction to the foundations of logic and mathematics not only takes theory into account, but also treats in some detail applications that have a substantial impact on everyday life (loans and mortgages, bar codes, public-key cryptography). A first college-level introduction to logic, proofs, sets, number theory, and graph theory, and an excellent self-study reference and resource for instructors.

Gödel John L. Casti, Werner DePauli, L. Casti, 2009-04-21 Kurt Gödel was an intellectual giant. His Incompleteness Theorem turned not only mathematics but also the whole world of science and philosophy on its head. Shattering

hopes that logic would, in the end, allow us a complete understanding of the universe, Gödel's theorem also raised many provocative questions: What are the limits of rational thought? Can we ever fully understand the machines we build? Or the inner workings of our own minds? How should mathematicians proceed in the absence of complete certainty about their results? Equally legendary were Gödel's eccentricities, his close friendship with Albert Einstein, and his paranoid fear of germs that eventually led to his death from self-starvation. Now, in the first book for a general audience on this strange and brilliant thinker, John Casti and Werner DePauli bring the legend to life.

Discrete Groups Ken'ichi Ōshika, Ken'ichi Ōshika, 2002 This book deals with geometric and topological aspects of discrete groups. The main topics are hyperbolic groups due to Gromov, automatic group theory, invented and developed by Epstein, whose subjects are groups that can be manipulated by computers, and Kleinian group theory, which enjoys the longest tradition and the richest contents within the theory of discrete subgroups of Lie groups. What is common among these three classes of groups is that when seen as geometric objects, they have the properties of a negatively curved space rather than a positively curved space. As Kleinian groups are groups acting on a hyperbolic space of constant negative curvature, the technique employed to study them is that of hyperbolic manifolds, typical examples of negatively curved manifolds. Although hyperbolic groups in the sense of Gromov are much more general objects than Kleinian groups, one can apply for them arguments and techniques that are quite similar to those used for Kleinian groups. Automatic groups are further general objects, including groups having properties of spaces of curvature 0. Still, relationships between automatic groups and hyperbolic groups are examined here using ideas inspired by the study of hyperbolic manifolds. In all of these three topics, there is a ``soul'' of negative curvature upholding the theory. The volume would make a fine textbook for a graduate-level course

Cars and Culture Rudi Volti, 2006-03-10 A succinct yet comprehensive history, *Cars and Culture* highlights the technical changes that altered the appearance and performance of automobiles, along with the myriad forces that have shaped the car's development.

Infinite Homotopy Theory H-J. Baues, A. Quintero, 2001-06-30 This book deals with algebraic topology, homotopy theory and simple homotopy theory of infinite CW-complexes with ends. Contrary to most other works on these subjects, the current volume does not use inverse systems to treat these topics. Here, the homotopy theory is approached without the rather sophisticated notion of pro-category. Spaces with ends are studied only by using appropriate constructions such as spherical objects of CW-complexes in the category of spaces with ends, and all arguments refer directly to this category. In this way, infinite homotopy theory is presented as a natural extension of classical homotopy theory. In particular, this book introduces the construction of the proper groupoid of a space with ends and then the cohomology with local coefficients is defined by the enveloping ringoid of the proper fundamental groupoid. This volume will be of interest to researchers whose work involves algebraic topology, category theory, homological algebra, general topology, manifolds, and cell complexes.
