How to STEM Carol Smallwood,Vera Gubnitskaia,2013-12-05 During the past few years, groups like the President's Council of Advisors on Science and Technology, Center for Education have been placing great emphasis on the significance of STEM (science, technology, engineering, and math) education. In brief, the US is seen as falling behind the rest of the world in science and technology education. In response, the curricula have been revised in many educational institutions and school districts across the country. It is clear that for STEM to be successful, other community organizations, most particularly libraries, need to be closely involved in the process. Library staff realize the importance of getting involved in STEM education, but many have difficulty finding comprehensive information that will help them plan and successfully implement STEM direction in their organization. This book is designed to meet that need. It is timely and relevant. How to STEM: Science, Technology, Engineering, and Math Education in Libraries is by and for libraries who are involved in contributing efforts into advancing these subjects. It is organized in 9 parts including funding, grant writing, community partnerships, outreach, research, and examples of specific programming activities. Authors

are drawn from the professional staffs of educational institutions, libraries, and non-profit organizations such as science museums. The book contains eight parts, each emphasizing a different aspect of how to succeed with STEM. Part 1 emphasizes how hands-on activities that are both fun and educational can be used to further STEM awareness. Parts 2 and 3 contain chapters on the uniting of STEM with Information Literacy. Innovative collection development ideas are discussed in Part 4 and Part 5 focuses on research and publishing. Outreach is the theme of Part 6 and the programs described in these chapters offer an array of ways to connect with students of all ages. The final section of How to STEM: Science, Technology, Engineering, and Math Education in Libraries addresses the funding of these programs. Librarians of all types will be pleased to discover easy-to-implement suggestions for collaborative efforts, many rich and diverse programming ideas, strategies for improving reference services and library instruction to speakers of English as a second language, marketing and promotional tips designed to welcome multicultural patrons into the library, and much more.

Authentic Portraits Chris Orwig, 2019-09-06 The most successful portraits take us well beyond the surface of how someone looks and show us the inner essence of who someone is. They reveal

character, soul, and depth. They uncover hidden hopes and profound truths, revealing that authentic and deeply human light that shines within. And while technical expertise is undoubtedly important, it's not the light, camera, or pose that creates a great portrait. It's you, and it's the connection you create with the subject that makes all the difference. In *Authentic Portraits*, photographer Chris Orwig teaches you that the secret to creating meaningful portraits is simple: curiosity, empathy, kindness, and soul...plus a bit of technique. While Chris spends significant time on the fundamentals of “getting the shot”—working with natural light, nailing focus, dialing in the correct exposure, effectively posing and directing the subject, intentionally composing the frame—he also passionately discusses the need for personal development, creative collaboration, and connection with the subject. Because who you are directly and deeply affects what you create, and it is only through cultivating your own inner light that you will be able to bring it out in your subjects. Filled with instruction, insight, and inspiration, *Authentic Portraits* is an honest and personal book about creating better frames. It's also about becoming your best self. Take the journey, and you'll learn to find your vision and voice, bring intention to your

photography and your life, embrace mystery, and understand the importance of gratitude and empathy. Along the way, you will teach the camera to see in a way that replicates how you feel, and you'll find you have all you need to create work of lasting significance.
