Race Car Aerodynamics J Katz,1996-03-08 The first book to summarize the secrets of the rapidly developing field of high-speed vehicle design. From F1 to Indy Car, Drag and Sedan racing, this book provides clear explanations for engineers who want to improve their design skills and enthusiasts who simply want to understand how their favorite race cars go fast. Explains how aerodynamics win races, why downforce is more important than streamlining and drag reduction, designing wings and venturis, plus wind tunnel designs and more.

Introduction to Information Retrieval Christopher D. Manning,Prabhakar Raghavan,Hinrich Schütze,2008-07-07 Class-tested and coherent, this textbook teaches classical and web information retrieval, including web search and the related areas of text classification and text clustering from basic concepts. It gives an up-to-date treatment of all aspects of the design and implementation of systems for gathering, indexing, and searching documents; methods for evaluating systems; and an introduction to the use of machine learning methods on text collections. All the important ideas are explained using examples and figures, making it perfect for introductory courses in information retrieval for advanced undergraduates and graduate students in computer science. Based on feedback from extensive classroom experience, the book has been carefully structured in order to make teaching more natural and effective. Slides and additional exercises (with solutions for lecturers) are also available through the book's supporting website to help course instructors prepare their lectures.

Feedback Systems Karl Johan Åström,Richard M. Murray,2021-02-02 The essential introduction to the principles and applications of feedback systems—now fully revised and expanded This textbook covers the mathematics needed to model, analyze, and design feedback systems. Now more user-friendly than ever, this revised and expanded edition of Feedback Systems is a one-volume resource for students and researchers in mathematics and engineering. It has applications across a range of disciplines that utilize feedback in physical, biological, information, and economic systems. Karl Åström and Richard Murray use techniques from physics, computer science, and operations research to introduce control-oriented modeling. They begin with state space tools for analysis and design, including stability of solutions, Lyapunov functions, reachability, state feedback observability, and estimators. The matrix exponential plays a central role in the analysis of linear control systems, allowing a concise development of many of the key concepts for this class of models. Åström and Murray then develop and explain tools in the frequency domain, including transfer functions, Nyquist analysis, PID control, frequency domain design, and robustness. Features a new chapter on design principles and tools, illustrating the types of problems that can be solved using feedback Includes a new chapter on fundamental limits and new material on the Routh-Hurwitz criterion and root locus plots Provides exercises at the end of every chapter Comes with an electronic solutions manual An ideal textbook for undergraduate and graduate students Indispensable for researchers seeking a self-contained resource on control theory

Signs and Symbols Adrian Frutiger,1998 Discusses the elements of a sign, and looks at pictograms, alphabets, calligraphy, monograms, text type, numerical signs, symbols, and trademarks.

Historical Painting Techniques, Materials, and Studio Practice Arie Wallert,Erma Hermens,Marja Peek,1995-08-24 Bridging the fields of conservation, art history, and museum curating, this volume contains the principal papers from an international symposium titled Historical Painting Techniques, Materials, and Studio Practice at the University of Leiden in Amsterdam, Netherlands, from June 26 to 29, 1995. The symposium—designed for art historians, conservators, conservation scientists, and museum curators worldwide—was organized by the Department of Art History at the University of Leiden and the Art History Department of the Central Research Laboratory for Objects of Art and Science in Amsterdam. Twenty-five contributors representing museums and conservation institutions throughout the world provide recent research on historical painting techniques, including wall painting and polychrome sculpture. Topics cover the latest art historical research and scientific analyses of original techniques and materials, as well as historical sources, such as medieval treatises and descriptions of painting techniques in historical literature. Chapters include the painting methods of Rembrandt and Vermeer, Dutch 17th-century landscape painting, wall paintings in English churches, Chinese paintings on paper and canvas, and Tibetan thangkas. Color plates and black-and-white photographs illustrate works from the Middle Ages to the 20th century.

Competition Car Aerodynamics Simon McBeath,2011-04-15 Aerodynamics is a science in itself, and is one of the most important factors in modern competition car design. This fully updated second edition covers all aspects of aerodynamics, including both downforce and drag. This complex subject is explained in down-to-earth terms, with the aid of numerous illustrations, including color CFD (Computational Fluid Dynamics) diagrams to demonstrate how aerodynamic devices work, as well as wind-tunnel studies.

The Conservation of Cave 85 at the Mogao Grottoes, Dunhuang Neville Agnew, Lori Wong, 2014-02-01 The Mogao Grottoes, a World Heritage Site in northwestern China, are located along the ancient caravan routes—collectively known as the Silk Road—that once linked China with the West. Founded by a Buddhist monk in the late fourth century, Mogao flourished over the following millennium, as monks, local rulers, and travelers commissioned hundreds of cave temples cut into a mile-long rock cliff and adorned them with vibrant murals. More than 490 decorated grottoes remain, containing thousands of sculptures and some 45,000 square meters of wall paintings, making Mogao one of the world's most significant sites of Buddhist art. In 1997 the Getty Conservation Institute, which had been working with the Dunhuang Academy since 1989, began a case study using the Late-Tang dynasty Cave 85 to develop a methodology that would stabilize the deteriorating wall paintings. This abundantly illustrated volume is the definitive report on the project, which was completed in 2010.

The Eminent Monk John Kieschnick, 1997-07-01 In an attempt to reconstruct an elusive aspect of the medieval Chinese imagination, *The Eminent Monk* examines biographies of Chinese Buddhist monks, from the uncompromising ascetic to the unfathomable wonder-worker. While analyzing images of the monk in medieval China, the author addresses some questions encountered along the way: What are we to make of accounts in "eminent monk" collections of deviant monks who violate monastic precepts? Who wrote biographies of monks and who read them? How did different segments of Chinese society contend for the image of the monk and which image prevailed? By placing biographies of monks in the context of Chinese political and religious rhetoric, *The Eminent Monk* explores both the role of Buddhist literature in Chinese history and the monastic imagination that inspired this literature.

Digital Copyright Jessica Litman, Professor Litman's work stands out as well-researched, doctrinally solid, and always piercingly well-written. -JANE GINSBURG, Morton L. Janklow Professor of Literary and Artistic Property, Columbia University Litman's work is distinctive in several respects: in her informed historical perspective on copyright law and its legislative policy; her remarkable ability to translate complicated copyright concepts and their implications into plain English; her willingness to study, understand, and take seriously what ordinary people think copyright law means; and her creativity in formulating alternatives to the copyright quagmire. - PAMELA SAMUELSON, Professor of Law and Information Management; Director of the Berkeley Center for Law & Technology, University of California, Berkeley In 1998, copyright lobbyists succeeded in persuading Congress to enact laws greatly expanding copyright owners' control over individuals' private uses of their works. The efforts to enforce these new rights have resulted in highly publicized legal battles between established media and new upstarts. In this enlightening and well-argued book, law professor Jessica Litman questions whether copyright laws crafted by lawyers and their lobbyists really make sense for the vast majority of us. Should every interaction between ordinary consumers and copyright-protected works be restricted by law? Is it practical to enforce such laws, or expect consumers to obey them? What are the effects of such laws on the exchange of information in a free society? Litman's critique exposes the 1998 copyright law as an incoherent patchwork. She argues for reforms that reflect common sense and the way people actually behave in their daily digital interactions. This paperback edition includes an afterword that comments on recent developments, such as the end of the Napster story, the rise of peer-to-peer file sharing, the escalation of a full-fledged copyright war, the filing of lawsuits against thousands of individuals, and the June 2005 Supreme Court decision in the Grokster case. Jessica Litman (Ann Arbor, MI) is professor of law at Wayne State University and a widely recognized expert on copyright law.

Everyone Eats E. N. Anderson, 2005-03-01 Everyone eats, but rarely do we ask why or investigate why we eat what we eat. Why do we love spices, sweets, coffee? How did rice become such a staple food throughout so much of eastern Asia? *Everyone Eats* examines the social and cultural reasons for our food choices and provides an explanation of the nutritional reasons for why humans eat, resulting in a unique cultural and biological approach to the topic. E. N. Anderson explains the economics of food in the globalization era, food's relationship to religion, medicine, and ethnicity as well as offers suggestions on how to end hunger, starvation, and malnutrition. *Everyone Eats* feeds our need to understand human ecology by explaining the ways that cultures and political systems structure the edible environment.

The History of Mathematics David M. Burton, 1991 This text is designed for the junior/senior mathematics major who intends to teach mathematics in high school or college. It concentrates on the history of those topics typically covered in an undergraduate curriculum or in elementary schools or high schools. At least one year of calculus is a prerequisite for this course. This book contains enough material for a 2 semester course but it is flexible enough to be used in the more common 1 semester course.

Speech & Language Processing Dan Jurafsky, 2000-09

Waste Input-Output Analysis Shinichiro Nakamura, Yasushi Kondo, 2009-02-08 Industrial ecology (IE) is a rapidly growing scientific discipline that is concerned with the sustainability of industrial systems under explicit consideration of its interdependence with natural systems. In recent years, there has been an ever-increasing awareness about the applicability of Input-Output Analysis (IOA) to IE, in particular to LCA (life cycle assessment) and MFA (material flow analysis). This is witnessed in the growing number of papers at ISIE (International Society for Industrial Ecology) conferences, which use IOA, and also by the installment of subject editors on IOA in the *International Journal of Life Cycle Assessment*. It can be said that IE has become a major field of application for IOA. The broadening of users of IOA from various backgrounds implies a need for a self-contained textbook on IOA that can meet the needs of students and practitioners without compromising on basic concepts and the latest developments. This book was written with the aim of filling this need, and is primarily addressed to students and practitioners of IE. As the title suggests, the core contents of the book have grown out of our research in IOA of waste management issues over the last decade. We have been fascinated by the versatile nature of IOA with regard to various technical issues of waste management in particular, and to IE in general. For us (both economists by training), IOA has turned out to be extremely useful in establishing productive communication with scientists and engineers interested in IE.

Motor Vehicle Structures Jason C. Brown, A. John Robertson, Stan T. Serpento, 2002

The Greek Magical Papyri in Translation, Including the Demotic Spells Hans Dieter Betz, 1986

The Economics of Motorsports Paulo Mourão, 2017-05-29 This book, the first study of its kind, examines the economics behind motorsports, in particular Formula One. Chapters discuss the costs involved in Formula racing and how they are borne by teams, promoters and racers. The book also looks at how society, the public and the private sectors stand to benefit economically from the motorsport industry. Other issues like the economics of TV rights, sponsorship and sustainability are also addressed, again for the first time in an economics book. Moving beyond the economics of what happens off the track, the book also undertakes a serious examination of what goes in to making a winning team and what having a winning racer can do for a team's fortunes. Mourão's highly relevant and contemporary book also looks at how motorsport teams confront the challenges of the modern sporting world, including

the changing dynamics of sports media and considers the future of Formula 1 as motorsports evolve.
