Applied Corporate Finance Aswath
Damodaran,2014-10-27 Aswath Damodaran,
distinguished author, Professor of Finance, and
David Margolis, Teaching Fellow at the NYU Stern
School of Business, have delivered the newest
edition of Applied Corporate Finance. This
readable text provides the practical advice
students and practitioners need rather than a sole
concentration on debate theory, assumptions, or
models. Like no other text of its kind, Applied
Corporate Finance, 4th Edition applies corporate
finance to real companies. It now contains six
real-world core companies to study and follow.
Business decisions are classified for students
into three groups: investment, financing, and
dividend decisions.

   Scientific Programming and Computer Architecture
Divakar Viswanath,2017-07-28 A variety of

programming models relevant to scientists
explained, with an emphasis on how programming
constructs map to parts of the computer. What
makes computer programs fast or slow? To answer
this question, we have to get behind the
abstractions of programming languages and look at
how a computer really works. This book examines
and explains a variety of scientific programming
models (programming models relevant to scientists)
with an emphasis on how programming constructs map
to different parts of the computer's architecture.
Two themes emerge: program speed and program
modularity. Throughout this book, the premise is
to get under the hood, and the discussion is tied
to specific programs. The book digs into linkers,
compilers, operating systems, and computer
architecture to understand how the different parts
of the computer interact with programs. It begins
with a review of C/C++ and explanations of how
libraries, linkers, and Makefiles work.
Programming models covered include Pthreads,
OpenMP, MPI, TCP/IP, and CUDA.The emphasis on how
computers work leads the reader into computer
architecture and occasionally into the operating
system kernel. The operating system studied is
Linux, the preferred platform for scientific
computing. Linux is also open source, which allows
users to peer into its inner workings. A brief
appendix provides a useful table of machines used
to time programs. The book's website
(https://github.com/divakarvi/bk-spca) has all the
programs described in the book as well as a link
to the html text.

Energy Minimization Methods in Computer Vision and Pattern Recognition Anand Rangarajan,Mário A. T. Figueiredo,2003-06-26 This book constitutes the refereed proceedings of the 4th International Workshop on Energy Minimization Methods in Computer Vision and Pattern Recognition, EMMCVPR 2003, held in Lisbon, Portugal in July 2003. The papers are organized in topical sections on unsupervised learning and matching, probabilistic modeling, segmentation and grouping, shape modeling, restoration and reconstruction, and graphs and graph-based methods.

Energetic Materials Manoj K. Shukla,Veera M. Boddu,Jeffery A. Steevens,Reddy Damavarapu,Jerzy Leszczynski,2017-10-09 This book offers a comprehensive account of energetic materials, including their synthesis, computational modeling, applications, associated degradation mechanisms, environmental consequences and fate and transport. This multi-author contributed volume describes how armed forces around the world are moving their attention from legacy explosive compounds, which are heat and shock sensitive (thus posing greater challenges in terms of handling and storage), to the insensitive munitions compounds/formulations such as insensitive munitions explosive (IMX) and the Picatinny Arsenal Explosive (PAX) series of compounds. The description of energetic materials focuses on explosives, pyrotechnic compositions, and propellants. The contributors go on to explain how modern generation energetic compounds must be

insensitive to shock and heat but at the same time
yield more energy upon explosion. Nanoinspired
and/or co-crystallized energetic materials offer
another route to generate next-generation
energetic materials, and this authoritative book
bridges a large gap in the literature by providing
a comprehensive analysis of these compounds.
Additionally, it includes a valuable overview of
energetic materials, a detailed discussion of
recent advances on future energetic compounds,
nanotechnology in energetic materials,
environmental contamination and toxicity,
assessment of munitions lethality, the application
quantitative structure–activity relationship
(QSAR) in design of energetics and the fate and
transport of munition compounds in the
environment.

ISNN is a prestigious annual symposium on neural networks with past events held in Dalian (2004), Chongqing (2005), Chengdu (2006), N- jing (2007) and Beijing (2008). Over the past few years, ISNN has matured into a well-established series of international conference on neural networks and their applications to other fields. Following this tradition, ISNN 2009 provided an a- demic forum for the participants to disseminate their new research findings and discuss emerging areas of research. Also, it created a stimulating environment for the participants to interact and exchange information on future research challenges and opportunities of neural networks and their applications. ISNN 2009 received 1,235 submissions from about 2,459 authors in 29 co- tries and regions (Australia, Brazil, Canada, China, Democratic People's Republic of Korea, Finland, Germany, Hong Kong, Hungary, India, Islamic Republic of Iran, Japan, Jordan, Macao, Malaysia, Mexico, Norway, Qatar, Republic of Korea, Singapore, Spain, Taiwan, Thailand, Tunisia,

  Web Data Management Serge Abiteboul,Ioana Manolescu,Philippe Rigaux,Marie-Christine Rousset,Pierre Senellart,2011-11-28 The Internet and World Wide Web have revolutionized access to information. Users now store information across multiple platforms from personal computers to smartphones and websites. As a consequence, data management concepts, methods and techniques are increasingly focused on distribution concerns. Now that information largely resides in the network, so do the tools that process this information. This book explains the foundations of XML with a focus on data distribution. It covers the many facets of distributed data management on the Web, such as description logics, that are already emerging in today's data integration applications and herald tomorrow's semantic Web. It also introduces the machinery used to manipulate the unprecedented amount of data collected on the Web. Several 'Putting into Practice' chapters describe detailed practical applications of the technologies and techniques. The book will serve as an introduction to the new, global, information systems for Web professionals and master's level courses.
