[Competition Car Aerodynamics](#) Simon McBeath,2011-04-15 Aerodynamics is a science in itself, and is one of the most important factors in modern competition car design. This fully updated second edition covers all aspects of aerodynamics, including both downforce and drag. This complex subject is explained in down-to-earth terms, with the aid of numerous illustrations, including color CFD (Computational Fluid Dynamics) diagrams to demonstrate how aerodynamic devices work, as well as wind-tunnel studies.

[An Introduction to 3D Computer Vision Techniques and Algorithms](#) Boguslaw Cyganek,J. Paul Siebert,2011-08-10 Computer vision encompasses the construction of integrated vision systems and the application of vision to problems of real-world importance. The process of creating 3D models is still rather difficult, requiring mechanical measurement of the camera positions or manual alignment of partial 3D views of a scene. However using algorithms, it is possible to take a collection of stereo-pair images of a scene and then automatically produce a photo-realistic, geometrically accurate digital 3D model. This book provides a comprehensive introduction to the methods, theories and algorithms of 3D computer vision. Almost every theoretical issue is underpinned with practical implementation or a working algorithm using pseudo-code and complete code written in C++ and MatLab®. There is the additional clarification of an accompanying website with downloadable software, case studies and exercises. Organised in three parts, Cyganek and Siebert give a brief history of vision research, and subsequently: present basic low-level image processing operations for image matching, including a separate chapter on image matching algorithms; explain scale-space vision, as well as space reconstruction and multiview integration; demonstrate a variety of practical applications for 3D surface imaging and analysis; provide concise appendices on topics such as the basics of projective geometry and tensor calculus for image processing, distortion and noise in images plus image warping procedures. An Introduction to 3D Computer Vision Algorithms and Techniques is a valuable reference for practitioners and programmers working in 3D computer vision, image processing and analysis as well as computer visualisation. It would also be of interest to advanced students and researchers in the fields of engineering, computer science, clinical photography, robotics, graphics and mathematics.

[9th International Symposium on High-Temperature Metallurgical Processing](#) Jiann-Yang Hwang,Tao Jiang,Mark William Kennedy,Dean Gregurek,Shijie Wang,Baojun Zhao,Onuralp Yılmaz,Ender Keskinilic,Jerome P Downey,Zhiwei Peng,Rafael. Padilla,2018-01-16 In recent years, global metallurgical industries have experienced fast and prosperous growth. High-temperature metallurgical technology is the backbone to support the technical, environmental, and economical needs for the growth. This collection features contributions covering the advancements and developments of new high-temperature metallurgical technologies and their applications to the areas of processing of minerals; extraction of metals; preparation of metallic, refractory and ceramic materials; treatment and recycling of slag and wastes; and saving of energy and protection of environment. The volume will have a broad impact on the academics and professionals serving the metallurgical industries around the world.

[Oil Crops](#) Johann Vollmann,Istvan Rajcan,2009-09-18 When one is privileged to participate long enough in a professional capacity, certain trends may be observed in the dynamics of how challenges are met or how problems are solved. Agricultural research is no exception in view of how the plant sciences have moved forward in the past 30 years. For example, the once grand but now nearly forgotten art of whole plant physiology has given way almost completely to the more sophisticated realm of molecular biology. What once was the American Society of Plant Physiologists' is now the American Society of Plant Molecular Biology; a democratic decision to indemnify efforts to go beyond the limits of the classical science and actually begin to understand the underlying biological basis for genetic regulation of metabolic mechanisms in plants. Yet, as new technologies open windows of light on the inner workings of biological processes, one might reminisce with faint nostalgia on days long past when the artisans of plant physiology, biochemistry, analytical chemistry and other scientific disciplines ebbed and waned in prominence. No intentional reference is made here regarding Darwinism; the plant sciences always have been extremely competitive. Technology is pivotal. Those who develop and/or implement innovative concepts typically are regarded as leaders in their respective fields. Each positive incremental step helps bring recognition and the impetus to push a scientific discipline forward with timely approaches to address relevant opportunities.

[Racing Camaros](#) Steve Holmes,2021-03-12 Chevrolet created the Camaro in response to the runaway sales success of the Ford Mustang, the first pony car. The Mustang went on sale in April 1964, and by August that same year, General Motors launched an intensive program to bring its own pony car to market. In September 1966, the Camaro went on sale. Chevrolet wanted the Camaro to be better than the Mustang in every area, including style, ride-quality, and performance. To that end, with the Mustang having already achieved so much racing success, Chevrolet wanted to beat it on the track also. [Racing Camaros: An International Photographic History 1966 - 1984](#) is a photographic celebration of road racing Camaros throughout the world. It focuses on production-based cars, rather than the heavily modified tube-frame silhouette machines that began appearing in the late 1970s. Included are images of big-budget factory-supported cars competing in the Trans-Am series, right through to low-buck independents, and cars competing throughout the world. For the first time, the international road racing representation of the Camaro is featured in a book, which includes countless photos that have never been published. Technical detail is provided throughout, from concept and design, right through its racing career, and the challenges and developments that took place to make it a winner. Only period images have been used. This is a true photographic history depicting the global popularity of the Chevrolet Camaro as a road racing car.

Chris Pistorius,Varadarajan Seshadri,Baojun Zhao,Dean Gregurek,Ender Keskinilic,2017-02-08 This collection features contributions covering the advances and developments of new high-temperature metallurgical technologies and their applications to the areas of: processing of minerals; extraction of metals; preparation of metallic, refractory, and ceramic materials; treatment and recycling of slag and wastes; conservation of energy; and environmental protection. The volume will have a broad impact on the academics and professionals serving the metallurgical industries around the world by providing them with comprehensive coverage of a wide variety of topics.

[Ford GT40](#) Ray Hutton,2018-02-06 This sumptuous book tells the story of one of the world's most important racing cars. Always raced in Gulf's iconic blue-and-orange colours, this Ford GT40, known by its chassis number '1075', won the Le Mans 24 Hours not just once but twice, in 1968 and 1969, and the second victory came after the closest fight ever seen at the finish of this great endurance race. Four other championship wins – at Brands Hatch, Spa, Watkins Glen and Sebring – add to this GT40's distinction as the very best of its breed, driven by 'greats' such as Jacky Ickx, Pedro Rodríguez and Brian Redman. The car's entire competition life is covered in fascinating detail, together with biographies of its drivers and insights into John Wyer's crack team that ran it, all supported by a fine collection of period photographs.

[How to Pass OSCP Series: Windows Privilege Escalation Step-By-Step Guide](#) Alan Wang,2020-11-13 This book is the first of a series of How To Pass OSCP books and focus on techniques used in Windows Privilege Escalation. This is a step-by-step guide that walks you through the whole process of how to escalate privilege in Windows environment using many common techniques. We start by gathering as much information about the target as possible either manually or using automated scripts. Next, we search for misconfigured services or scheduled tasks, insufficient file permission on binaries or services, vulnerable kernel, vulnerable software running with high privileges, sensitive information stored on local files, credential saved in the memory, registry settings that always elevate privileges before executing a binary, hard-coded credential contained in the application configuration files, and many more. [Austin Healey](#) Simon Ham,2018-04-03 This first title in a brand-new series of Porter Profiles throws the spotlight on one of the most successful Big Healeys of all time. It is one of few cars to have such a varied history throughout a racing career that spans its entire life. Registered UJB 143, it was a works entry for the Sebring 12 Hours and Le Mans 24 Hours in 1960. After being sold to the privateer Ecurie Chiltern outfit, it was re-registered DD 300 and returned to the famous French Enduro in '61 and '62. It then passed to Healey stalwart John Chatham and would regularly be raced over the next four decades, in everything from Modsports to sprints and finally historic events. The Healey's long and successful career continues with its current owners and it is all covered in this fascinating new book, complete with a superb selection of period photographs.
