Ethno-Musicology Jaap Kunst, 2012-12-06 This booklet hardly needs a preface; the contents, I think, speak for themselves. It contains a short and carefully brought up to date resume of all that I, as a private University Lecturer in Amsterdam, have tried to teach my pupils. It is intended as a general introduction to ethno-musicology, before going on to the study of the forms of separate music-cultures. I sincerely hope that those, who wish to teach themselves and to qualify in this branch of knowledge, will find a satisfactory basis for self tuition in the matter here brought together. Regarding the possibility of a new edition, any critical remarks or information as to possible desiderata would be very gratefully received. J.K. PREFACE TO THE SECOND EDITION My request for critical remarks and desiderata has not been ignored. My sincere thanks to all who took the trouble to let me know what they missed in my booklet. Through their collaboration the contents have undergone a considerable improvement and enlargement as compared to the original edition issued in 1950 by the Royal Tropical Institute, Amsterdam, under the title 'Musicologica'. I have taken care to add many particulars from non-European sources, with the result that now the book is no longer so Europe-centric as it was.

Advances in New Materials J. Riffle, J.C.

Salamone, 2012-10-26 of Polymer Chemistry, Inc. of the American Chemical Society held its The Division 15th Biennial Polymer Symposium on the topic, Advances in New Materials, November 17-21, 1990, at the Pier 66 Resort and Marina in Ft. Lauderdale, Florida. A three and one half day program was presented by recognized leaders in major areas of new polymeric materials. The topics of the Biennial Symposium included new high performance polymers, polymers for electronic applications, electrically conducting polymers, nonlinear optics, new polymer systems, and polymers derived from biological media. These are the subject areas of this volume of Contemporary Topics in

Polymer Science. The intent of the Symposium was to focus on recent advances in polymeric materials. The technical sessions were complemented by an initial poster session which augmented the various technical sessions. A particular highlight of the meeting was the presentation to Professor Michael Szwarc of the 1990 Division of Polymer Chemistry Award by Dr. J. L. Benham, Chairman of the T Aymer Division. During his Award address, Professor Szwarc described how he had become a polymer chemist and later developed living polymers. Without a doubt, Professor Szwarc has made a profound contribution to the polymer field, which has yielded many new forms of living polymerization.

Comprehensive Polymer Science, Volume 7 Geoffrey Allen, J. C. Bevington, Sundar L. Aggarwal, 1989 Volume 7 deals with specialty polymers and polymer processing, with eight chapters reviewing generic polymer systems and applications and seven chapters describing unit operations of polymer processing.

Brothers Rodriguez Carlos Jalife, 2009 Exhaustive research and extensive interviews presents a carefully realized, painstakingly accurate portrait of Pedro and Ricardo Rodriguez. Photographs show the brothers at every stage of their lives, from childhood until their early deaths, and in all forms of competition.

Electronic and Photonic Applications of Polymers S. Richard Turner, 1988 Annotation. Papers of a symposium at the 192nd Meeting of the ACS Anaheim, Calif. Sept. 1988. Polymers have become a part of our everyday life. In the telecommunications industry applications have ranged from replacement of lead as a sheath in electric cable to meeting the stringent requirements for dielectrics in transoceanic communication. This seven-chapter book details the latest developments and trends in these applications. Annotation(c) 2003 Book News, Inc., Portland, OR (booknews.com).

Crown Ethers and Phase Transfer Catalysis in Polymer Science Lon Mathias, 2013-11-22 Phase transfer catalysis or

interfacial catalysis is a synthetic technique involving transport of an organic or inorganic salt from a solid or aqueous phase into an organic liquid where reaction with an organic-soluble substrate takes place. Over the past 15 years there has been an enormous amount of effort invested in the development of this technique in organic synthesis. Several books and numerous review articles have appeared summarizing applications in which low molecular weight catalysts are employed. These generally include either crown ethers or onium salts of various kinds. While the term phase transfer catalysis is relatively new, the concept of using a phase transfer agent (PTA) is much older~ Both Schnell and Morgan employed such catalysts in synthesis of polymeric species in the early 1950's. Present developments are really extensions of these early applications. It has only been within the last several years that the use of phase transfer processes have been employed in polymer synthesis and modification. Similarly, the use of polymer-bound phase transfer agents is also a recent development. These and related areas have nonetheless enjoyed explosive growth as measured by the number of publications and the variety of applications which have appeared. Several reviews dealing with these 16 polymer-related investigations have been published.

Pearce, 2012-05-06 This marks the first publication of the Division of Polymer Chemistry, Inc., American Chemical Society, biennial polymer symposia. This new series will feature new and novel developments in polymer science and technology as presented at these symposia. This volume reports the proceedings of the Eighth Biennial Polymer Symposium of the Division of Polymer Chemistry held at Key Biscayne, Florida on November 20 - 24, 1976. It is concerned with a number of developments having both scientific and practical significance. These include polymeric

liquid crystal systems in the melt and in solution, polymer blends, and novel polymers in extended chain conformations produced by solid-state polymerization. Rates of conformational transitions and cis-trans isomerizations in polymers, a new look at rubber elasticity theory and new synthetic procedures for stiffening polymer chains are some of the new scientific developments. The book concludes with two approaches for the use of polymers in the important field of slow drug release. The authors are all well-known scientists and include Nobel Laureate Paul Flory, first recipient of the Polymer Division Award which was presented at this Symposium. Eli M. Pearce John R.
