Britain and Italy in the Era of the Great War Stefano Marcuzzi,2020-12-10 This is an important reassessment of British and Italian grand strategies during the First World War. Stefano Marcuzzi sheds new light on a hitherto overlooked but central aspect of Britain and Italy's war experiences: the uneasy and only partial overlap between Britain's strategy for imperial defence and Italy's ambition for imperial expansion. Taking Anglo-Italian bilateral relations as a special lens through which to understand the workings of the Entente in World War I, he reveals how the ups-and-downs of that relationship influenced and shaped Allied grand strategy. Marcuzzi considers three main issues – war aims, war strategy and peace-making – and examines how, under the pressure of divergent interests and wartime events, the Anglo-Italian 'traditional friendship' turned increasingly into competition by the end of the war, casting a shadow on Anglo-Italian relations both at the Peace Conference and in the interwar period.

Irreducible Mind Edward F. Kelly,Emily Williams Kelly,Adam Crabtree,2010 Current mainstream opinion in psychology, neuroscience, and philosophy of mind holds that all aspects of human mind and consciousness are generated by physical processes occurring in brains. Views of this sort have dominated recent scholarly publication. The present volume, however, demonstrates empirically that this reductive materialism is not only incomplete but false. The authors systematically marshal evidence for a variety of psychological phenomena that are extremely difficult, and in some cases clearly impossible, to account for in conventional physicalist terms. Topics addressed include phenomena of extreme psychophysical influence, memory, psychological automatisms and secondary personality, near-death experiences and allied phenomena, genius-level creativity, and 'mystical' states of consciousness both spontaneous and drug-induced. The authors further show that these rogue phenomena are more readily accommodated by an alternative 'transmission' or 'filter' theory of mind/brain relations advanced over a century ago by a largely forgotten genius, F. W. H. Myers, and developed further by his friend and colleague William James. This theory, moreover, ratifies the commonsense conception of human beings as causally effective conscious agents, and is fully compatible with leading-edge physics and neuroscience. The book should command the attention of all open-minded persons concerned with the still-unsolved mysteries of the mind.

Steel Designers' Manual Fifth Edition: The Steel Construction Institute Institute Steel Construction,1993-01-18 This classic manual for structural steelwork design was first published in 1956. Since then, it has sold many thousands of copies worldwide. The fifth edition is the first major revision for 20 years and is the first edition to be fully based on limit state design, now used as the primary design method, and on the UK code of practice, BS 5950. It provides, in a single volume, all you need to know about structural steel design.

Phytochemistry of Medicinal Plants John T. Arnason,Rachel Mata,John T. Romeo,2013-11-11 Phytochemicals from medicinal plants are receiving ever greater attention in the scientific literature, in medicine, and in the world economy in general. For example, the global value of plant-derived pharmaceuticals will reach \$500 billion in the year 2000 in the OECD countries. In the developing countries, over-the-counter remedies and ethical phytomedicines, which are standardized toxicologically and clinically defined crude drugs, are seen as a promising low cost alternatives in primary health care. The field also has benefited greatly in recent years from the interaction of the study of traditional ethnobotanical knowledge and the application of modern phytochemical analysis and biological activity studies to medicinal plants. The papers on this topic assembled in the present volume were presented at the annual meeting of the Phytochemical Society of North America, held in Mexico City, August 15-19, 1994. This meeting location was chosen at the time of entry of Mexico into the North American Free Trade Agreement as another way to celebrate the closer ties between Mexico, the United States, and Canada. The meeting site was the historic Calinda Geneve Hotel in Mexico City, a most appropriate site to host a group of phytochemists, since it was the address of Russel Marker. Marker lived at the hotel, and his famous papers on steroidal saponins from *Dioscorea composita*, which launched the birth control pill, bear the address of the hotel.

Exiting war Romain Fathi,Margaret Hutchison,Andrekos Varnava,Michael Walsh,2022-01-18 Exiting war explores a particular 1918-20 'moment' in the British Empire's history, between the First World War's armistices of 1918, and the peace treaties of 1919 and 1920. That moment, we argue, was a challenging and transformative time for the Empire. While British authorities successfully answered some of the post-war tests they faced, such as demobilisation, repatriation, and fighting the widespread effects of the Spanish flu, the racial, social, political and economic hallmarks of their imperialism set the scene for a wide range of expressions of loyalties and disloyalties, and anticolonial movements. The book documents and conceptualises this 1918-20 'moment' and its characteristics as a crucial three-year period of transformation for and within the Empire, examining these years for the significant shifts in the imperial relationship that occurred and as laying the foundation for later change in the imperial system.

Curious Naturalists Dr. Niko Tinbergen,2017-01-12 Dr. Niko Tinbergen was well known as a naturalist and a student of animal behaviour in England, on the Continent and in the United States. Ever since he was a young student in Holland he had been curious about nature, and in this book he sets out some of the facts that 25 years of curiosity gave him. As a biologist, anything living was his province—the bee-killing wasps and the digger wasps of the Dutch sand dunes; the Snow Bruntings and Phalaropes of Greenland; Hobbies and other hawks; moths and butterflies in various parts of England and Holland; Black-headed Gulls of the Ravenglass nature reserve, Cumberland, the Kittiwakes and Eider Ducks of the Farne Islands off the coast of Northumberland. Readers cannot fail to be struck—and possibly sometimes amused—by the patience and ingenuity shown in the field studies undertaken by Dr. Tinbergen and his fellow naturalists—and which are now passed on for the benefit and interest of his readers. The studies were always undertaken seriously, but this did not prevent Dr. Tinbergen from writing about them in the liveliest way; he realised that quite often he and his friends must have seemed to onlookers to be very curious naturalists indeed.

Winning the Peace Robert Cameron Orr,2004 Events in Iraq, Afghanistan, and the Balkans have proved that failed and defeated states threaten the national security interests of the United States and the stability of entire regions. But success in addressing these threats clearly depends on more than military might; the post-conflict period is equally crucial. Case studies in this book examine the U.S. approach in Kosovo, East Timor, Sierra Leone, Afghanistan, and Iraq. The book offers policy guidance on how to handle current reconstruction challenges and on building capacity to do a better job when America is inevitably called on to restore failed nations in the future.

Plant Nitrogen Metabolism Jonathan E. Poulton,John T. Romeo,Eric E. Conn,2012-12-06 This volume is based on papers presented by invited speakers at a symposium entitled Plant Nitrogen Metabolism held in conjunction with the 28th Annual Meeting of the Phytochemical Society of North America. The meeting took place on the campus of the University of Iowa at Iowa City during June 26-30, 1988, and attracted 110 participants from 11 countries. The goal of the symposium was to trace the pathway by which nitrogen passes from soil and atmosphere into both primary and secondary nitrogenous metabolites, focusing upon areas which were felt to be most rapidly expanding. From nodulines (nodule specific proteins) and GS/GOGAT mutants to sugar mimics (polyhydroxyalkaloids) and herbicide inhibitors of amino acid metabolism, research in nitrogen metabolism has expanded into areas barely envisioned only a few years ago. Both the nitrogen specialist and the general plant biochemist will be pleased by the range of topics covered here. Following an overview in Chapter 1 of plant nitrogen metabolism, the remaining chapters are loosely organized into three groups. Chapters 2-6 deal primarily with the biochemistry and molecular biology of nitrogen assimilation and transport, Chapters 7-9 with amino acid metabolism, and Chapters 10-12 with secondary metabolites.

Secondary Metabolism in Model Systems John Romeo, 2004-07-14 The chapters presented in Secondary Metabolism in Model Systems are a microcosm of what the recent completion, or near completion, of various genome projects are enabling biochemists to understand not only about control and regulation of secondary metabolism, and how various pathways relate to each other, but also about its relation to primary metabolism. A major paradigm shift is occurring in the way researchers need to view secondary metabolism in the future. It is also clear that model systems, such as the ones discussed in the symposium, are providing new information and insight almost faster than researchers can process it! The volumes in this series contain articles on developing topics of interest to scientists, students and individuals interested in recent developments in the biochemistry, chemistry and molecular biology of plants. An excellent series volume covering the advances in understanding of gene functions, a high profile area of research due to recent genome projects This book provides essential information on new model systems available to biochemists The chapters in this volume are based on the papers presented in the symposium entitled Secondary Metabolism in Model Systems

Phenolic Metabolism in Plants Ragai K. Ibrahim, Helen A. Stafford, 2012-12-06 This volume contains reviews presented at the 31 st annual meeting of the Phytochemical Society of North America, held at Colorado State University in Fort Collins, Colorado on June 22-26, 1991. This symposium, entitled Phenolic Metabolism in Plants, celebrated the origin of this society as the Plant Phenolics Group of North America; the first symposium, entitled Biochemistry of Plant Phenolic Substances, was also held at Fort Collins from August 31 to September 1, 1961. A brief history of the Society is presented in Chapter 12 by Stewart Brown, one of the original founders of the Society. We dedicate this volume to Hans Grisebach, 1926-1990, Professor of Biochemistry at the Biologisches Institut II, Freiburg, Germany, where he headed for many years a laboratory responsible for major advances in the area of phenolic metabolism; this will be self evident from the numerous bibliographical references cited in the literature for papers by his Freiburg group from about 1958 until now, and subsequently by former students and collaborators. His impact on the data reviewed in this volume will testify to this.

Settler Colonial Governance in Nineteenth-Century Victoria Leigh Boucher, Lynette Russell, 2015-04-29 This collection represents a serious re-examination of existing work on the Aboriginal history of nineteenth-century Victoria, deploying the insights of postcolonial thought to wrench open the inner workings of territorial expropriation and its historically tenacious variability. Colonial historians have frequently asserted that the management and control of Aboriginal people in colonial Victoria was historically exceptional; by the end of the century, colonies across mainland Australia looked to Victoria as a 'model' for how to manage the problem of Aboriginal survival. This collection carefully traces the emergence and enactment of this 'model' in the years after colonial separation, the idiosyncrasies of its application and the impact it had on Aboriginal lives. It is no exaggeration to say that the work on colonial Victoria represented here is in the vanguard of what we might see as a 'new Australian colonial history'. This is a quite distinctive development shaped by the aftermath of the history wars within Australia and through engagement with the 'new imperial history' of Britain and its empire. It is characterised by an awareness of colonial Australia's positioning within broader imperial circuits through which key personnel, ideas and practices flowed, and also by 'local' settler society's impact upon, and entanglements with, Aboriginal Australia. The volume heralds a new, spatially aware, movement within Australian history writing. - Alan Lester This is a timely, astutely assembled and well nuanced collection that combines theoretical sophistication with empirical solidity. Theoretically, it engages knowledgeably but not uncritically with a broad range of influences, including postcolonialism, the new imperial history, settler colonial studies and critical Indigenous studies. Empirically, contributors have trawled an impressive array of archival sources, both standard and relatively unknown, bringing a fresh eye to bear on what we thought we knew but would now benefit from reconsidering. Though the collection wears its politics openly, it does so lightly and without jeopardising fidelity to its sources. - Patrick Wolfe

Genetic Engineering of Plant Secondary Metabolism Brian E. Ellis, Gary W. Kuroki, Helen A. Stafford, 2012-12-06 In this volume of Recent Advances in Phytochemistry you will find a record of the pioneering attempts of plant biochemists and molecular biologists to modify the patterns of secondary metabolism in plants, as presented at the 33rd annual meeting of the Phytochemical Society of North America, in Asilomar, California, on June 27 -July 1, 1993. The studies described here represent a marriage of the newest of technologies with one of the oldest human activities, exploitation of plant chemistry. They also represent the beginning of a new era of phytochemical research, an era that will undoubtedly begin to provide answers to some of the long-standing questions that have absorbed plant biochemists for the past century. There is, for instance, a common deflating experience to which every worker in the area of plant secondary metabolism can probably relate. After hearing about the latest research findings regarding some aspect of remarkable compound X, someone in the audience finally directs the inevitable question at the hapless speaker. Tell me, is anything known as to the biological role of compound X in the plant? The answer, in most cases, must be essentially nothing! This is a frustrating scenario for both the speaker and the audience, since the very fact that a complex biosynthetic pathway remains encoded in a plant genome points to an associated selective advantage. The problem is that establishing the nature and scale of that advantage is a very complex task.

Biochemistry of the Mevalonic Acid Pathway to Terpenoids G.H. Neil Towers, Helen A. Stafford, 2012-12-06 This series of lectures was delivered at the 29th meeting of the Phytochemical Society of North America, held at the University of British Columbia in Vancouver, B. C. , Canada on June 16th-20th, 1989. Topics concerning terpenoids, consisting of isoprene units, are now so numerous that a judicious selection for a relatively limited symposium was difficult. We were able to assemble, however, a potpourri of reviews on topical areas of terpenoid chemistry, biochemistry and biology, by scientists who are making exciting contributions and whose work points the way to significant future research. Because of the importance of terpenoids in the life of plants, and indeed in all living organisms, a periodical review of the mevalonic acid pathway and of the subsequent biochemical events leading to the biosynthesis of isoprenoids needs no justification. Life, as we know it, would not be possible without the ability of living organisms to employ this metabolic sequence which proceeds from condensations of three molecules of acetyl-CoA and terminates with the elaboration of the terpenoid precursors, isopentenyl pyrophosphate and dimethylallyl pyrophosphate. In addition to producing obviously essential compounds that are partially or completely of isoprenoid origin (Fig. 1), such as hormones, photosynthetic pigments, compounds involved in electron transport in respiration and in photosynthesis, oxidative enzymes and membrane components, plants elaborate thousands of novel terpenoids, many of which do not as yet have identifiable physiological, biochemical or even ecological roles, e. g. the cardenolides, ecdysones or saponins.

Strings of Connectedness P.G. Toner, 2015-09-18 For nearly four decades, Ian Keen has been an important, challenging, and engaging presence in Australian anthropology. Beginning with his PhD research in the mid-1970s and through to the present, he has been a leading scholar of Yolngu society and culture, and has made lasting contributions to a range of debates. His scholarly productivity, however, has never been limited to the Yolngu, and he has conducted research and published widely on many other facets of Australian Aboriginal society: on Aboriginal culture in 'settled' Australia; comparative historical work on Aboriginal societies at the threshold of colonisation; a continuing interest in kinship; ongoing writing on language and society; and a set of significant land claims across the continent. In this volume of essays in his honour, a group of Keen's former students and current colleagues celebrate the diversity of his scholarly interests and his inspiring influence as a mentor and a friend, with contributions ranging across language structure, meaning, and use; the post-colonial engagement of Aboriginal Australians with the ideas and structures of 'mainstream' society; ambiguity and indeterminacy in

Aboriginal symbolic systems and ritual practices; and many other interconnected themes, each of which represents a string that he has woven into the rich tapestry of his scholarly work.

The Struggle for Aboriginal Rights Bain Attwood,2020-07-22 The Struggle for Aboriginal Rights is the first book of its kind. Not only does it tell the history of the political struggle for Aboriginal rights in all parts of Australia; it does so almost entirely through a selection of historical documents created by the Aboriginal campaigners themselves, many of which have never been published. It presents Aboriginal perspectives of their dispossession and their long and continuing fight to overcome this. In charting the story of Aboriginal political activity from its beginnings on Flinders Island in the 1830s to the fight over native title today, this book aims to help Australians better understand both the continuities and the changes in Aboriginal politics over the last 150 years: in the leadership of the Aboriginal political struggle, the objectives of these campaigners for rights for Aborigines, their aspirations, the sources of their programmes for change, their methods of protest, and the outcomes of their protest. Through the words of Aboriginal activists, across 150 years, The Struggle for Aboriginal Rights charts the relationship between political involvement and Aboriginal identity.
