Stirling Moss Scrapbook 1955 Stirling Moss, Philip Porter, 2007-09-01 The Stirling Moss Scrapbook 1955 is packed with intriguing detail, superb illustrations and a plethora of period cuttings from around the world. Throughout his career he created his personal scrapbooks, several volumes per year, and he kept a diary and photo albums, too. This book dips into his personal records and is spiced throughout with treasures to delight and fascinate. These are supplemented by period comments and many of his anecdotes. Moss has a fund of stories and is refreshingly non-PC!

Race Car Aerodynamics J Katz, 1996-03-08 The first book to summarize the secrets of the rapidly developing field of high-speed vehicle design. From F1 to Indy Car, Drag and Sedan racing, this book provides clear explanations for engineers who want to improve their design skills and enthusiasts who simply want to understand how their favorite race cars go fast. Explains how aerodynamics win races, why downforce is more important than streamlining and drag reduction, designing wings and venturis, plus wind tunnel designs and more.

Alfa Romeo T33/TT/3 Ian Wagstaff, 2020-09 The Alfa Romeo T33/TT/3 was produced by Alfa's Autodelta racing department, under the guidance of Carlo Chiti, to compete in the 1972 World Championship for Makes. Hopes were high, as the previously dominant Group 5 racers (including the Porsche 917s and Ferrari 512s) had been outlawed in favour of 3-litre Group 6 cars, such as the Alfa. However, the Alfas struggled to take the fight to the well-developed and reliable Ferrari 312PBs, though scored regular podium positions. The highlight was a second place in the epic Targa Florio Sicilian road race, where Helmut Marko put in a stirring drive to come within seconds of victory. Marko was driving chassis 115.72.002, the most successful of the T33/TT/3 chassis Alfa Romeo T33/TT/3 tells the full story of the T33/TT/3, with an emphasis on the fascinating history of chassis 115.72.002, which competed in seven world championship rounds in 1972. The car would later have a unique second career on the race circuits and hill climbs of Greece, before racing in Japan and South Africa prior to an eventual return to Europe, where it is still a frequent competitor in historic events. The unique history and success of 115.72.002 makes it a worthy addition to Porter Press's acclaimed Exceptional Cars series.

A Thrilling Race Patricia Harris, 2017-07-15 It's race day at Mr. Fred's racetrack. Who will win? This fast-paced story puts young readers in the driver's seat as Mary Ann and her friends zoom around the track. Basic concepts such as opposites and colors are introduced in this exciting fiction book, which accompanies the HABA game Monza. Readers will also learn about teamwork, problem solving, and the importance of being a good sport regardless of whether they win or lose. Age-appropriate text and colorful illustrations make this an enjoyable book for both emerging readers and younger listeners.

A Chequered Life Richard Heseltine, 2013-11-15 This is the first and only account of the Chequered Flag race team and its charismatic founder, Graham Warner. It charts the highs and lows, the victories and losses, and features interviews with the man himself and several star drivers of the 1960s and '70s. Accompanied by 150 photographs, many previously unpublished, plus a look at Graham's subsequent career as a fighter aircraft expert and restorer, this is a unique story of a fascinating life in motorsport.

Racing Camaros Steve Holmes, 2021-03-12 Chevrolet created the Camaro in response to the runaway sales success of the Ford Mustang, the first pony car. The Mustang went on sale in April 1964, and by August that same year, General Motors launched an intensive program to bring its own pony car to market. In September 1966, the Camaro went on sale. Chevrolet wanted the Camaro to be better than the Mustang in every area, including style, ride-quality, and performance. To that end, with the Mustang having already achieved so much racing success, Chevrolet wanted to beat it on the track also. *Racing Camaros: An International Photographic History 1966 - 1984* is a photographic celebration of road racing Camaros throughout the world. It focuses on production-based cars, rather than the heavily modified tube-frame silhouette machines that began appearing in the late 1970s. Included are images of big-budget factory-supported cars competing in the Trans-Am

series, right through to low-buck independents, and cars competing throughout the world. For the first time, the international road racing representation of the Camaro is featured in a book, which includes countless photos that have never been published. Technical detail is provided throughout, from concept and design, right through its racing career, and the challenges and developments that took place to make it a winner. Only period images have been used. This is a true photographic history depicting the global popularity of the Chevrolet Camaro as a road racing car.

Formula 1 Technology Peter Wright,Tony Matthews,2001-07-15 Author Peter Wright identifies and outlines five parameters -- Power, Weight, Tire Grip, Drag and Lift -- and shows how each can be maximized. In addition, he describes the variety of technologies (including those that have been banned over the years) that are involved, not just in the makeup of the Formula 1 cars, but also in the component manufacturing, systems testing, and the actual racing of the cars.

Race Car Vehicle Dynamics Set William F. Milliken,Douglas L. Milliken,L. Daniel Metz,1997-11 This set includes Race Car Vehicle Dynamics, and Race Car Vehicle Dynamics - Problems, Answers and Experiments. Written for the engineer as well as the race car enthusiast, Race Car Vehicle Dynamics includes much information that is not available in any other vehicle dynamics text. Truly comprehensive in its coverage of the fundamental concepts of vehicle dynamics and their application in a racing environment, this book has become the definitive reference on this topic. Although the primary focus is on the race car, the engineering fundamentals detailed are also applicable to passenger car design and engineering. Authors Bill and Doug Milliken have developed many of the original vehicle dynamics theories and principles covered in this book, including the Moment Method, g-g Diagram, pair analysis, lap time simulation, and tyre data normalization. The book also includes contributions from other experts in the field. Chapters cover: *The Problem Imposed by Racing *Tire Behavior *Aerodynamic Fundamentals *Vehicle Axis Systems and more. Written for the engineer as well as the race car enthusiast and students, the companion workbook to the original classic book, Race Car Vehicle Dynamics, includes: *Detailed worked solutions to all of the problems *Problems for every chapter in Race Car Vehicle Dynamics, including many new problems *The Race Car Vehicle Dynamics Program Suite (for Windows) with accompanying exercises *Experiments to try with your own vehicle *Educational appendix with additional references and course outlines *Over 90 figures and graphs This workbook is widely used as a college textbook and has been an SAE International best seller since it's introduction in 1995.

Aerodynamic Drag Mechanisms of Bluff Bodies and Road Vehicles Gino

Sovran,2012-12-06 These Proceedings contain the papers and oral discussions presented at the Symposium on AERODYNAMIC DRAG MECHANISMS of Bluff Bodies and Road Vehides held at the General Motors Research Laboratories in Warren, Michigan, on September 27 and 28, 1976. This international, invitational Symposium was the twentieth in an annual series, each one having been in a different technical discipline. The Symposia provide a forum for areas of science and technology that are of timely interest to the Research Laboratories as well as the technical community at large, and in which personnel of the Laboratories are actively involved. The Symposia furnish an opportunity for the exchange of ideas and current knowledge between participating research specialists from educational, industrial arid governmental institutions and serve to stimulate future research activity. The present world-wide energy situation makes it highly desirable to reduce the force required to move road vehicles through the atmosphere. A significant amount of the total energy consumed for transportation is expended in overcoming the aerodynamic resistance to motion of these vehicles. Reductions in this aerodynamic drag can therefore have a large impact on ground transportation energy requirements. Although aerodynamic development work on road vehides has been performed for many years, it has not been widely reported or accompanied by much basic research.

Freedomnomics John R. Lott,2007-06-04 Are free market economies really based on fleecing the consumer? Is the U.S. economy truly just a giant free-for-all that encourages duplicity in our everyday transactions? Is everyone from corporate CEOs to your local car salesman really looking to make a buck at your expense? In *Freedomnomics: Why the Free Market Works and Other Half-Baked Theories Don't*, economist and bestselling author John R. Lott, Jr., answers these and other common economic questions, bravely confronting the profound distrust of the market that the bestselling book *Freakonomics* has helped to popularize. Using clear and hard-hitting examples, Lott shows how free markets liberate the best, most creative, and most generous aspects of our society - while efforts to constrain economic liberty, no matter how well-intentioned, invariably lead to increased poverty and injustice.
