The Art of Tron: Legacy Justin Springer,2010-11-23 Tron Legacy is one of the most highly anticipated movies of 2010. Hedlund plays Sam, the son of the original movie's lead, Kevin Flynn (Bridges). Kevin has been missing for years. To find him, Sam must return to the world of the Grid. This 3D movie, in theaters December 17th 2010, is sure to be a mega-hit. The Art and Making of Tron Legacy is a view into not only the creation of the 2010 film, but will also contain never-before-seen looks at the design and creation of 1982's original Tron. Tron was like nothing the world had ever seen. A melding of cutting-edge computer effects and live action, it captured the imaginations of a generation. It also gave viewers a glimpse of the future of movies, and created a cult following. The design, effects and iconic qualities of Tron: Legacy will appeal to everyone who loves action and sci-fi movies. Fans of the original movie and the legions of fans for the new movie will be thrilled to get an insider's perspective on the movie's creation, and that's exactly what they'll find in The Art and Making of Tron Legacy. Written by co-producer Justin Springer, the book will spotlight the technical wizardry, imagination, artistry, and passion that brought this project to life. From concept art and designs, to profiles on the characters and the actors playing them, to on-set photography and visuals from the movie itself, every step of the film's creation will be broken down and laid out for the reader. In addition, this title will also have a preface by Joseph Kosinski, the director of Tron Legacy; and a forward by Steven Lisberger, the director of the original Tron and producer of Tron Legacy. How Emotions Are Made Lisa Feldman Barrett,2017-03-07 Preeminent psychologist Lisa Barrett lays out how the brain constructs emotions in a way that could revolutionize psychology, health care, the legal system, and our understanding of the human mind. "Fascinating . . . A thought-provoking journey into emotion science."—The Wall Street Journal "A singular book, remarkable for the freshness of its ideas and the boldness and clarity with which they are presented."—Scientific American "A brilliant and original book on the science of emotion, by the deepest thinker about this topic since Darwin."—Daniel Gilbert, best-selling author of Stumbling on Happiness The science of emotion is in the midst of a revolution on par with the discovery of relativity in physics and natural selection in biology. Leading the charge is psychologist and neuroscientist Lisa Feldman Barrett, whose research overturns the long-standing belief that emotions are automatic, universal, and hardwired in different brain regions. Instead, Barrett shows, we construct each instance of emotion through a unique interplay of brain, body, and culture. A lucid report from the cutting edge of emotion science, How Emotions Are Made reveals the profound real-world consequences of this breakthrough for everything from neuroscience and medicine to the legal system and even national security, laying bare the immense implications of our latest and most intimate scientific revolution.

The Second Self Sherry Turkle,1984 In The Second Self, Sherry Turkle looks at the computer not as a tool, but as part of our social and psychological lives; she looks beyond how we use computer games and spreadsheets to explore how the computer affects our awareness of ourselves, of one another, and of our relationship with the world. Technology, she writes, catalyzes changes not only in what we do but in how we think. First published in 1984, The Second Self is still essential reading as a primer in the psychology of computation. This twentieth anniversary

edition allows us to reconsider two decades of computer culture-to (re)experience what was and is most novel in our new media culture and to view our own contemporary relationship with technology with fresh eyes. Turkle frames this classic work with a new introduction, a new epilogue, and extensive notes added to the original text. Turkle talks to children, college students, engineers, AI scientists, hackers, and personal computer owners-people confronting machines that seem to think and at the same time suggest a new way for us to think-about human thought, emotion, memory, and understanding. Her interviews reveal that we experience computers as being on the border between inanimate and animate, as both an extension of the self and part of the external world. Their special place betwixt and between traditional categories is part of what makes them compelling and evocative. In the introduction to this edition, Turkle quotes a PDA user as saying, When my Palm crashed, it was like a death. I thought I had lost my mind. Why we think of the workings of a machine in psychological terms-how this happens, and what it means for all of us-is the ever more timely subject of *The Second Self*. Book jacket.

Information Arts Stephen Wilson,2003-02-28 An introduction to the work and ideas of artists who use—and even influence—science and technology. A new breed of contemporary artist engages science and technology—not just to adopt the vocabulary and gizmos, but to explore and comment on the content, agendas, and possibilities. Indeed, proposes Stephen Wilson, the role of the artist is not only to interpret and to spread scientific knowledge, but to be an active partner in determining the direction of research. Years ago, C. P. Snow wrote about the two cultures of science and the humanities; these developments may finally help to change the outlook of those who view science and technology as separate from the general culture. In this rich compendium, Wilson offers the first comprehensive survey of international artists who incorporate concepts and research from mathematics, the physical sciences, biology, kinetics, telecommunications, and experimental digital systems such as artificial intelligence and ubiquitous computing. In addition to visual documentation and statements by the artists, Wilson examines relevant art-theoretical writings and explores emerging scientific and technological research likely to be culturally significant in the future. He also provides lists of resources including organizations, publications, conferences, museums, research centers, and Web sites.

Chlorophyll a Fluorescence in Aquatic Sciences: Methods and Applications David J. Suggett,Michael A. Borowitzka,Ondrej Prášil,2010-08-23 Measurements of variable chlorophyll fluorescence have revolutionised global research of photosynthetic bacteria, algae and plants and in turn assessment of the status of aquatic ecosystems, a success that has partly been facilitated by the widespread commercialisation of a suite of chlorophyll fluorometers designed for almost every application in lakes, rivers and oceans. Numerous publications have been produced as researchers and assessors have simultaneously sought to optimise protocols and practices for key organisms or water bodies; however, such parallel efforts have led to difficulties in reconciling processes and patterns across the aquatic sciences. This book follows on from the first international conference on “chlorophyll fluorescence in the aquatic sciences” (AQUAFLUO 2007): to bridge the gaps between the concept, measurement and application of chlorophyll fluorescence through the synthesis and integration of current knowledge from leading researchers and assessors as well as instrument manufacturers.

Virtual Reality Melanie Chan,2014-01-16 The idea of virtual realities has a long and complex historical trajectory, spanning from Plato's concept of the cave and the simulacrum, to artistic styles such as Trompe L'oeil, and more recently developments in 3D film, television and gaming. However, this book will pay particular attention to the time between the 1980s to the 1990s when virtual reality and cyberspace were represented, particularly in fiction, as a wondrous technology that enabled transcendence from the limitations of physical embodiment. The purpose of this critical historical analysis of representations of virtual reality is to examine how they might deny, repress or overlook embodied experience. Specifically, the author will contend that embodiment is a fundamental aspect of immersion in virtual reality, rather than something which is to be transcended. In this way, the book aims to challenge distorted ideas about transcendence and productively contribute to debates about embodiment and technology.

My Memories of a Future Life Roz Morris, 2011 'Spellbinding... a hypnotic experience' 'I was hooked - grabbed immediately' 'Beautiful, simple, evocative' 'Absolutely gripping' 'Don't plan to read just a few pages' 'A strange and stubborn book, visual and visceral, original and odd... will stay with you long after finishing its final pages' - For Books' Sake If you were somebody's past life... What echoes would you leave in their soul? Could they be the answers you need now? It's a question Carol never expected to face. She's a gifted musician who needs nothing more than her piano and certainly doesn't believe she's lived before. But forced by injury to stop playing, she fears her life may be over. Enter her soulmate Andre: healer, liar, fraud and loyal friend. Is he her future incarnation or a psychological figment? And can his story help her discover how to live now? A novel in the tradition of *The Time Traveller's Wife*, *Vertigo* and *The Gargoyle*, *My Memories of a Future Life* is much more than a 'who was I' tale. It is a multi-layered story of souls on conjoined journeys – in real time and across the centuries. It's a provocative study of the shadows we don't know are driving our lives, from our own pasts and from the people with us right now. An examination of what we believe, what we create and how we scare and heal each other. Above all, it's the story of how one lost soul must search for where she now belongs. 'I was always fascinated by tales of regression to past lives,' says the author Roz Morris. 'I thought, what if instead of going to the past, someone went to a future life? Who would do that? Why? What would they find?' 'Another longtime interest was the world of the classical musician. Musical scores are exacting and dictatorial - you play a note for perhaps a sixth of a second and not only that, there are instructions for how to feel - *expressivo*, *amoroso*. It's as if you don't play a piece of classical music; you channel the spirit of the composer. 'I became fascinated by a character who routinely opened her entire soul to the most emotional communications of classical composers. And I thought, what if she couldn't do it any more? And then, what if I threw her together with someone who could trap the part of her that responded so completely to music?'
