Tsunamis Antony Joseph,2011-01-19 The devastating impacts of tsunamis have received increased focus since the Indian Ocean tsunami of 2004, the most destructive tsunami in over 400 years of recorded history. The tsunamis that occurred as a result of the earthquake in Japan in March 2011 further emphasized the need for detection, monitoring, and early-warning technologies. This professional reference is the first of its kind: it provides a globally inclusive review of the current state of tsunami detection technology and will be a much-needed resource for oceanographers and marine engineers working to upgrade and integrate their tsunami warning systems. It focuses on the two main tsunami warning systems (TWS): International and Regional. Featured are comparative assessments of detection, monitoring, and real-time reporting technologies. The challenges of detection through remote measuring stations are also addressed, as well as the historical and scientific aspects of tsunamis. Offers readers the only source of practical content on the technological details of the subject Written by a tsunami detection and monitoring expert who has 32 years of experience in the field Companion web site featuring multi-media components, timely updates on fast-paced technological developments, and an online forum where scientists can exchange ideas, discuss technological updates and provide the author with valuable feedback

Hazardous Seas Louise K. Comfort,Harkunti P. Rahayu,2023-07-20 Tsunamis are infrequent but terrifying hazards for coastal communities. Difficult to predict, they materialize with little warning, claiming thousands of lives and causing billions of dollars in damage. Recent mega-tsunamis in Japan and Indonesia claimed close to 250,000 lives, triggering wide-scale economic and social disruption. Developing countries cannot afford costly underwater cable systems, and governments and relief organizations have been forced to rely on flawed warning systems such as deep-sea buoys. Now, a groundbreaking new approach to tsunami detection and warning, which relies on low-cost underwater sensors and networks of smartphone communication, has changed the equation. Developed by an international, interdisciplinary team of researchers, this approach allows at-risk coastal communities to have an economically viable, scientifically sound means to protect themselves. Coeditors Louise K. Comfort and Harkunti P. Rahayu, accomplished experts in disaster preparedness, contend that it will give communities precious additional minutes to communicate warnings about imminent tsunamis to residents, potentially saving many lives. Chapters authored by a close group of collaborators present the science behind this new approach, describing conceptual design, computational models, and real-time testing of a prototype system in the warm equatorial waters of Indonesia's Mentawai Sea. Introductory chapters explain the sociotechnical approach—how undersea sensors can transmit data to a network of electronic devices on land to alert residents to impending tsunami threats in near-real time. Subsequent chapters explore what this might look like: assessing communities at risk; designing interactive information systems for communication during an emergency; designing wireless networks for smartphone communication that can guide residents to safety; and designing community-based shelters. The book concludes with a thoughtful analysis of how these sociotechnical advances might be used for all coastal cities at risk of tsunamis, sea-level rise, storm surges, and other hazards. *Hazardous Seas* is an invaluable guide for policy makers and international NGOs looking to save lives from tsunamis and mitigate crippling damage to communities, and provides a comprehensive overview of tsunami detection and warning for students of engineering, computer science, planning, policy, and economic and environmental analysis.

Tsunami Mohammad Mokhtari,2011-12-16 The objective of this multi-disciplinary book is to provide a collection of expert writing on different aspects of pre- and post- tsunami developments and management techniques. It is intended to be distributed within the scientific community and among the decision makers for tsunami risk reduction. The presented chapters have been thoroughly reviewed and accepted for publication. It presents advanced methods for tsunami measurement using Ocean-bottom pressure sensor, kinematic GPS buoy, satellite altimetry, Paleotsunami, Ionospheric sounding, early warning system, and scenario based numerical modeling. It continues to present case studies from the Northern Caribbean, Makran region and Tamil Nadu coast in India. Furthermore, classifying tsunamis into local, regional and global, their possible impact on the region and its immediate vicinity is highlighted. It also includes the effects of tsunami hazard on the coastal environment and infrastructure (structures, lifelines, water resources, bridges, dykes, etc.); and finally the need for emergency medical response preparedness and the prevention of psychological consequences of the affected survivors has been discussed.

Tsunami Education, Protection and Preparedness (Penerbit USM) Koh Hock Lye,Philip L-F Liu &,Teh Su Yean,2014-11-25 Since the 2004 Andaman Tsunami, we have been constantly reminded about the reported threats of earthquakes and tsunamis worldwide. The recent earthquake in Padang, Indonesia and the tsunami in Samoa Islands in 2009 as well as the large destructive earthquake in Haiti in 2010 reinforce the perceived threats. This timely series of the South China Sea Tsunami Workshop (SCSTW)

was first organized by Academia Sinica Taipei, Taiwan on 5–7 December 2007 to promote community awareness and preparedness as well as scientific research on tsunami early warning systems and related hazards, hoping to achieve tsunami resilient communities. The Second SCSTW was organized by Shanghai Jiao Tong University on 1–3 December 2008 in Shanghai. This proceedings book contains a collection of 46 articles selected among 69 articles presented in the Third SCSTW held on 3–5 November 2009 in Universiti Sains Malaysia (USM), Pulau Pinang. This collection of selected articles explores a variety of issues related to tsunami as well as other natural disasters such as earthquakes, storm surge and landslide. The proceedings consists of two books, with the first book focusing on tsunami simulation for impact assessment, while the second book covers education, protection and preparedness to face tsunami and other natural disasters. The contributors of the articles in the proceedings come from differing academic and professional background including but not limited to engineering, mathematics, physics, biology, geography, environmental and marine sciences, sustainable studies, education, humanities and architecture. It is the fervent hope of the Editors that future SCSTWs will continue the tradition and aspiration of the past workshops. Universiti Sains Malaysia, Penerbit Universiti Sains Malaysia
