Who Owns Poverty? Martín Burt,2019-09-03 This is the story about a question we never thought to ask - Who owns poverty? - and about an unexpected answer that challenges everything that we thought we knew about what poverty is, and what we can do about it. This book is for the governments, development organizations and changemakers who are frustrated with simply trying to reduce poverty, or alleviating its effects--and our lack of progress in doing either. This is a book that celebrates the power of audacious questions and considers what happens when we put poverty back into the hands of the real experts: families living in poverty.--Page 4 of cover

Gathering Souls Alexandre Coello de la Rosa,2019 This essay deals with the missionary work of the Society of Jesus in today's Micronesia from the seventeenth to the twentieth century. In order to understand the Jesuits' evangelization project of gathering

souls in the Oceanic archipelagos, it is important to place them into the broader context of Philippine politics.

The Cambridge Handbook of Morphology Andrew Hippisley, Gregory Stump, 2016-11-24 The Cambridge Handbook of Morphology describes the diversity of morphological phenomena in the world's languages, surveying the methodologies by which these phenomena are investigated and the theoretical interpretations that have been proposed to explain them. The Handbook provides morphologists with a comprehensive account of the interlocking issues and hypotheses that drive research in morphology; for linguists generally, it presents current thought on the interface of morphology with other grammatical components and on the significance of morphology for understanding language change and the psychology of language; for students of linguistics, it is a guide to the present-day landscape of morphological science and to the advances that have brought it to its current state; and for readers in other fields (psychology, philosophy, computer science, and others), it reveals just how much we know about systematic relations of form to content in a language's words - and how much we have yet to learn.

Domesticated: Evolution in a Man-Made World Richard C. Francis, 2015-05-25 “An essential read for anyone interested in the stories of the animals in our home or on our plate.”—BBC Focus Without our domesticated plants and animals, human civilization as we know it would not exist. We would still be living at subsistence level as hunter-gatherers if not for domestication. It is no accident that the cradle of civilization—the Middle East—is where sheep, goats, pigs, cattle, and cats commenced their fatefully intimate association with humans. Before the agricultural revolution, there were perhaps 10 million humans on

earth. Now there are more than 7 billion of us. Our domesticated species have also thrived, in stark contrast to their wild ancestors. In a human-constructed environment—or man-made world—it pays to be domesticated. Domestication is an evolutionary process first and foremost. What most distinguishes domesticated animals from their wild ancestors are genetic alterations resulting in tameness, the capacity to tolerate close human proximity. But selection for tameness often results in a host of seemingly unrelated by-products, including floppy ears, skeletal alterations, reduced aggression, increased sociality, and reduced brain size. It's a package deal known as the domestication syndrome. Elements of the domestication syndrome can be found in every domesticated species—not only cats, dogs, pigs, sheep, cattle, and horses but also more recent human creations, such as domesticated camels, reindeer, and laboratory rats. That domestication results in this suite of changes in such a wide variety of mammals is a fascinating evolutionary story, one that sheds much light on the evolutionary process in general. We humans, too, show signs of the domestication syndrome, which some believe was key to our evolutionary success. By this view, human evolution parallels the evolution of dogs from wolves, in particular. A natural storyteller, Richard C. Francis weaves history, archaeology, and anthropology to create a fascinating narrative while seamlessly integrating the most cutting-edge ideas in twenty-first-century biology, from genomics to evo-devo.

Endobronchial Ultrasound-Guided Transbronchial Needle Aspiration (EBUS-TBNA): A Practical Approach S.E. Monaco, W.E. Khalbuss, L. Pantanowitz, 2014-05-22 This high-yield reference book focuses on the clinical, technical, and pathological aspects of endobronchial ultrasound-guided transbronchial needle aspiration (EBUS-TBNA). Its reviews cover all

aspects of EBUS-TBNA, including the clinical perspective, technical aspects of the procedure, and cytomorphology of common and uncommon entities, as well as highlights diagnostic challenges. Each chapter features a multitude of full-color high-resolution images and includes key references to the current literature in the field. Additionally, reference tables and informative figures highlight the salient points. The book is unique in that it is written by experienced thoracic surgeons, pulmonary medicine physicians, and cytopathologists who use EBUS-TBNA in a large medical center. This publication is of interest to individuals learning and practicing cytopathology, in addition to clinicians practicing pulmonary/thoracic medicine or surgery. In short, it provides important pearls of wisdom to create a comprehensive reference for all physicians involved with EBUS-TBNA.

Religions in Practice John R. Bowen, 2015-08-07 Examines religious practices from an anthropological perspective *Religions in Practice*, 6/e, offers an issues-oriented perspective on everyday religious behaviors – prayer, sacrifice, initiation, healing, etc. – by focusing on such topics as transnationalism, gender, and religious laws. The text examines a full spectrum of religions, from small-scale societies to major, established religions. The in-depth treatment of Islam, Hinduism, and Christianity is particularly noteworthy and easily supplemented with field projects directly related to the text.

History of Urban Form Before the Industrial Revolution A.E.J. Morris, 2013-12-02 Provides an international history of urban development, from its origins to the industrial revolution. This well established book maintains the high standard of information found in the previous two editions, describing the physical results of some 5000 years of urban activity. It explains and develops the concept of 'unplanned' cities that grow organically, in contrast

with 'planned' cities that were shaped in response to urban form determinants. Spread throughout the texts are copious illustrations from a wealth of sources, including cartographic urban records, aerial and other photographs, original drawings and the author's numerous analytical line drawings.

Postvelar Harmony Kimary N. Shahin, 2002 This book examines the formal bases of postvelar harmony and its crosslinguistic variation. It is of interest especially to phonologists concerned with segmental harmony and its explanation within Optimality Theory. Postvelar harmony in two unrelated languages, Palestinian Arabic and St'át'imcets Salish, is examined in detail. The result is the first comprehensive clarification of postvelar phonology for either language. Two harmonies are distinguished: uvularisation harmony ('emphasis spread') and pharyngealisation (tongue-root-retraction) harmony. The distinction between these two in the Arabic and the Salish is supported by much instrumental phonetics data. The complex harmony properties are explained as the result of systematic interaction between Correspondence, Alignment and Grounded constraints. In the course of the investigation, the segmental inventories of both languages are clarified, and a careful understanding of the distinction between phonology and phonetics, and the use of phonetics in phonology, is applied.

Transbronchial Cryobiopsy in Diffuse Parenchymal Lung Disease Venerino Poletti, 2019 This book presents both theoretical and practical aspects of transbronchial cryobiopsy, a new diagnostic technique for the detection of diffuse parenchymal lung disease that is attracting great interest in the scientific community. In the context of a multidisciplinary

discussion, comprising radiologic-pathologic correlations, the authors examine the technical and safety issues - such as equipment, endoscopic setting, anesthesiologic approaches and bleeding control - on one hand, and the diagnostic yield and clinical meaning on the other. The volume offers several case studies - including idiopathic pulmonary fibrosis, granulomatous disorders, interstitial pneumonias, rare lung disseminated tumors- that illustrate the high diagnostic yield and safety of this innovative technique. The book appeals to a wide readership, including residents, pulmonologists with expertise in diffuse parenchymal lung diseases, interventional pulmonologists, thoracic radiologists, pathologists, anesthesiologists, internists and rheumatologists.

Ecology of Threatened Semi-Arid Wetlands Salvador Sánchez-Carrillo,David G. Angeler,2012-10-13 Playing a critical role in both influencing climate change and mitigating its impacts, the world's diverse wetlands have become one of the world's most threatened ecosystems as unsustainable land-use practices coupled with irrational use of water have already resulted in large-scale wetlands loss and degradation. To develop sound management and conservation schemes to assure wetlands sustainability in the long term requires long-term understanding of wetlands ecology. Yet until now, long-term interdisciplinary research into these systems has been limited to only a few systems from tropical or temperate climates (such as the Florida Everglades, and Czech biosphere reserve). This new book adds to the existing wetlands literature, providing a unique reference in basic and applied Mediterranean wetland ecology, based on results from long-

term interdisciplinary research at the RAMSAR and UNESCO Biosphere site, of Las Tablas de Daimiel, Spain. Dating back to the early 1990s the research highlights changes in the biotic and abiotic environment in response to cumulative anthropogenic stressors, and provide guidance on applying this understanding to sound management and conservation. With particular relevance to researchers dealing with semi-arid wetlands in the Mediterranean and elsewhere, as well as to resource managers, the book discusses the complexity of the interacting abiotic and biotic environment across different spatial and temporal scales and across various levels of biological hierarchy is highlighted, and reveals how management based on poor knowledge causes more damage than repair. The book will be of interest to researchers interested in freshwater ecology, hydrobotany, hydrology, geology, biogeochemistry, landscape ecology and environmental management.

Meat Inspection and Control in the Slaughterhouse Thimjos Ninios, Janne Lundén, Hannu Korkeala, Maria Fredriksson-Ahomaa, 2014-06-11 Meat inspection, meat hygiene and official control tasks in the slaughterhouse have always been of major importance in the meat industry, and are intimately related with animal diseases and animal welfare. The history of meat inspection has largely been a success story. Huge steps have been taken over more than a century to prevent the transmission of pathogenic organisms and contagious diseases from animals to humans. Various factors influence the quality and safety of meat including public health hazards (zoonotic pathogens, chemical substances and veterinary drugs), animal health and welfare issues during transport and slaughter. Meat inspection is one of the most important programs in improving food safety, and its scope has enlarged considerably over the last decades. Globalization has affected

the complexity of the modern meat chain and has provided possibilities for food fraud and unfair competition. During the last two decades many food fraud cases have been reported, which have caused concern among consumers and the industry. Subsequently meat inspection is faced with new challenges. *Meat Inspection and Control in the Slaughterhouse* is an up-to-date reference book that responds to these changes and reflects the continued importance of meat inspection for the food industry. The contributors to this book are all international experts in the areas of meat inspection and the official controls limited to slaughterhouses, providing a rare insight into the international meat trade. This book will be of importance to students, professionals and members of the research community worldwide who aim to improve standards of meat inspection procedures and food safety.

Freedom of Analysis? Sylvia Blaho, Patrik Bye, Martin Krämer, 2008-08-27 This volume draws together papers that argue for a renewed focus on the role of hard constraints on phonological representations as well as the processes that operate on them. These are issues that have been sidelined since the shift in emphasis in phonological research to functionally grounded output-oriented constraints. Taking Optimality Theory as their starting point, the articles attack the question to what degree the Generator function Gen should be given freedom of analysis on three fronts. (1) What is the nature of the representations that Gen manipulates? Is a return to more articulated theories of segmental and prosodic representation desirable? (2) What restrictions might there be on the operations that Gen carries out on representations? Should Gen be endowed with structure-changing potential, as assumed in work couched within Correspondence Theory, or is a return to the principle of Containment preferable? Should Gen be restricted in the number

of edits it can carry out at any one time? Should Gen be restricted to generating phonetically interpretable candidates? (3) What is the relationship between Gen and functionally arbitrary or opaque phonological patterns? Should Gen's freedom be restricted in order to account for language-specific phonology? The solutions offered to these questions bear significantly on current issues that are of fundamental concern in linguistic theory, including representations, parallelism vs. serialism, and the division of labour between linguistic modules. The authors scrutinize these issues using data from a variety of unrelated languages, including Czech, English, Greek, Haitian Creole, Hawaiian, Lardil, Spanish, Turkish, and Yowlumne.

The Primary Acoustic Nuclei Rafael Lorente de Nó,1981

Sirena Selena Mayra Santos-Febres,2007-04-01 Discovered by Martha Divine in the backstreets of San Juan, picking over garbage, drugged out of his mind and singing boleros that transfix the listener, a fifteen year old hustler is transformed into Sirena Selena, a diva whose uncanny beauty and irresistible voice will be their ticket to fame and fortune. Auditioning for one of the luxury hotels in the Dominican Republic, Selena casts her spell over Hugo Graubel, one of the hotel's rich investors. Graubel is a powerful man in the Republic, married with children. Silena, determined to escape the poverty and abuse s/he suffered as a child, engages Graubel in a long seduction in this mordant, intensely lyrical tragi-comedy - part masque, part cabaret - about identity (class, race, gender) and the hunger and desire to be other things.

Contrast in Phonology Peter Avery,B. Elan Dresher,Keren Rice,2008-11-03 This book

takes contrast, an issue that has been central to phonological theory since Saussure, as its central theme, making explicit its importance to phonological theory, perception, and acquisition. The volume brings together a number of different contemporary approaches to the theory of contrast, including chapters set within more abstract representation-based theories, as well as chapters that focus on functional phonetic theories and perceptual constraints. This book will be of interest to phonologists, phoneticians, psycholinguists, researchers in first and second language acquisition, and cognitive scientists interested in current thinking on this exciting topic.
