*Tupolev TU-22* Sergey Burdin, 2005-11-17 This historic Russian aircraft was first delivered to the Soviet Air Force at the height of the Cold War in 1961. It remained in service until replaced by the much modified Tu-22M Backfire which was introduced in the early 1970s and still remains in service. It was the first Soviet supersonic bomber and was used for reconnaissance and bombing, in the latter role carrying either conventional or nuclear bombs. The early aircraft had a range of 1,800 miles but later models had a much increased radius of action through the introduction of in-flight refuelling. This book looks at the design and development of the aircraft up to the introduction of the type M Backfire. Details of construction, weapon systems, photo-reconnaissance and jamming equipment are included to cover the several variant models. Operational use is explained and the text includes many first-hand accounts from Russian aircrew of the period. The book will be superbly illustrated by unique official photographs and manuals.

*Tupolev Tu-16* Yefim Gordon, Dmitriy Komissarov, Vladimir Rigmant, 2017-10-17 Developed to meet a Soviet Ministry of Defense requirement for a fast bomber that would counter the threat posed by NATO, the Tu-16 was a ground-breaking project. It was the first Soviet medium bomber to feature swept wings, and it was built around a pair of turbojets that were the world's most powerful jet engines at the time. First flown in 1952, the Tu-16 filled such roles as nuclear bomb delivery, missile strike, reconnaissance, and Electronic Counter Measures. It also served as the basis for the first Soviet jet airliner, the Tu-104. Nearly 1,500 were built for the Soviet Air Force and the Soviet Navy, and the Tu-16 showed remarkable

longevity, the final examples being retired in 1993. The type saw quite a bit of combat--from the Six-Days War of 1967 to the Afghan War. The Tu-16 was also produced in China and remains in Chinese service to this day. All known versions are described, as is the Tu-16's operational career. The book features many hitherto unpublished photos.

**Tupolev Tu-4** E. Gordon, Yefim Gordon, Dmitriy Komissarov, Vladimir Rigmant, 2014 After World War II, the Soviet Union and the USA, who had been allies in the war, started moving towards political and military confrontation. The Soviet Union urgently needed a strategic bomber capable of striking at the USA. Thus, the windfall of three battle-damaged B-29s forced to land in Soviet territory was most welcome. The Soviet Union kept them; a huge reverse-engineering effort ensued, resulting in a Soviet copy of the Superfortress (the Tu-4) and a major technology boost to the Soviet aircraft and avionics industries. From then on, the Soviet Superfortress evolved independently, some of the Tu-4 versions having no direct U.S. equivalent. These included the Tu-4K missile carrier, a wing-to-wing flight refueling tanker, and the Tu-4T transport. The Tu-4A was the first Soviet nuclear-capable bomber. Experimental versions included engine testbeds, a towed escort fighter program, and more. The book also describes the Tu-4's production and service history (including service in China--the only nation besides the USSR to operate the type) and touches on the Tu-4's transport derivatives, the Tu-70 airliner, and the Tu-75 military airlifter. The book is illustrated with many color side views and hitherto unpublished photographs.

Tupolev Tu-16 Badger Yefim Gordon, Vladimir Rigmant, 2004-06-21 The establishment of NATO posed

the need for the Soviet war machine to create a fast jet bomber capable of reaching targets throughout Western Europe and combatting the carrier task forces with which the US Navy could throw its weight around the world. The basic Tu-16 which first flew in the mid-1950s was developed into nearly 50 versions adopted for various roles, including nuclear-capable bombers, anti-shipping missile strike aircraft, torpedo-bombers and minelayers, numerous reconnaissance and ECM variants, assorted development aircraft for testing new engines, avionics and systems. The Tu-16 even found civil uses as a fast mailplane and a weather research/rainmaking aircraft! The Badger, as the bomber was known to the West, served as the basis for the Soviet Union's first jet airliner, the Tu-104. The nearly 1,500 Tu-16s built in the Soviet Union were an important factor in preventing all-out military confrontation between the East and the West. Since the mid-1950s and until the 1980s the Badger has been a regular picture on the pages of the Western press, snooping around Western naval groups every now and then. The type also had its share of 'hot' wars, getting its baptism of fire in the Six-Day War of 1967. Apart from three factories in the USSR, the Tu-16 was built under license in China as the H-6 and remains in service with the People's Liberation Army Air Force. Other foreign users were Egypt, Indonesia and Iraq. All known versions are described and a full account is given of the Tu-16's operational career in the USSR and abroad during the Cold War and in the days after that when many of the surviving Badgers were used as target drones. The book features many previously unpublished photos and a detailed production list.

*Tupolev Tu-160* Yefim Gordon, Dmitriy Komissarov, 2016-11-28 Developed as the answer to the American B-1, the Tupolev Tu-160 was the Soviet Union's most potent strategic bomber. Several project

versions were rejected, and a highly controversial contest involving some of the Soviet Union's top-class aircraft design companies took place before the Tu-160 variable-geometry bomber reached the hardware stage. Its design made use of many advanced features not used previously on Soviet bombers. While being a nuclear deterrent for most of its career, the Tu-160 has recently seen actual combat in the war on terrorism. The Tu-160 story is not over yet, since Russia is now resuming production of the type to bolster its strategic potential. The book gives the type's complete development, test and service history of the Tu-160, including such intriguing episodes as the type's overseas deployment to Venezuela, and the flight of a Tu-160 with Russian President Vladimir Putin aboard. It is richly illustrated with color photos and original factory drawings. A comparison is made of the Tu-160 and its American counterpart, the B-1.

*Aviation Systems* Andreas Wittmer, Thomas Bieger, Roland Müller, 2011-08-17 This book aims to provide comprehensive coverage of the field of air transportation, giving attention to all major aspects, such as aviation regulation, economics, management and strategy. The book approaches aviation as an interrelated economic system and in so doing presents the "big picture" of aviation in the market economy. It explains the linkages between domains such as politics, society, technology, economy, ecology, regulation and how these influence each other. Examples of airports and airlines, and case studies in each chapter support the application-oriented approach. Students and researchers in business administration with a focus on the aviation industry, as well as professionals in the industry looking to refresh or broaden their knowledge of the field will benefit from this book.

A Qualitative Piloted Evaluation of the Tupolev Tu-144 Supersonic Transport Robert A. Rivers,2000 Two U.S. research pilots evaluated the Tupolev Tu-144 supersonic transport aircraft on three dedicated

flights: one subsonic and two supersonic profiles. The flight profiles and maneuvers were developed jointly by Tupolev and U.S. engineers. The vehicle was found to have unique operational and flight characteristics that serve as lessons for designers of future supersonic transport aircraft. Vehicle subsystems and observed characteristics are described as are flight test planning and ground monitoring facilities. Maneuver descriptions and extended pilot narratives for each flight are included as appendices.

**Visual Aircraft Recognition** U. S. Army,2013-01-14 This manual is primarily a ready reference to assist the ground observer in aircraft recognition and identification. It provides information on current operational aircraft of the United States and foreign countries, which may be observed worldwide in the combat area. It can be used as source material for personnel conducting unit training in visual aircraft recognition. The procedures in this publication apply throughout the US Army. The data is based on the best information available at the time of publication; however, it is not all-inclusive because of some classification guidelines. This publication, by nature, has a built-in time lag, and some aircraft may still be under development or classified at the time of writing, but may be fielded or unclassified at, or after, publication.

**Fundamentals of Aircraft and Rocket Propulsion** Ahmed F. El-Sayed,2016-05-25 This book provides a comprehensive basics-to-advanced course in an aero-thermal science vital to the design of engines for either type of craft. The text classifies engines powering aircraft and single/multi-stage rockets, and derives performance parameters for both from basic aerodynamics and thermodynamics laws. Each type of engine is analyzed for optimum performance goals, and mission-appropriate engines selection is explained. Fundamentals of Aircraft and Rocket Propulsion provides information about and analyses of: thermodynamic cycles of shaft engines (piston, turboprop, turboshaft and propfan); jet engines (pulsejet, pulse detonation engine, ramjet, scramjet, turbojet and turbofan); chemical and non-chemical rocket engines; conceptual design of modular rocket engines (combustor, nozzle and turbopumps); and conceptual design of different modules of aero-engines in their design and off-design state. Aimed at graduate and

final-year undergraduate students, this textbook provides a thorough grounding in the history and classification of both aircraft and rocket engines, important design features of all the engines detailed, and particular consideration of special aircraft such as unmanned aerial and short/vertical takeoff and landing aircraft. End-of-chapter exercises make this a valuable student resource, and the provision of a downloadable solutions manual will be of further benefit for course instructors.

Myasishchev M-4 And 3M Yefim Gordon, Dmitriy Komissarov, 2021-07-28 When the Myasishchev design bureau was reborn in 1951, it was immediately tasked with creating a high-speed strategic bomber to balance the threat posed by NATO's heavy bombers, notably the B-52. Designated M-4 and code-named Bison by NATO, the new four-turbojet bomber was developed within an incredibly short time--just one year. It made use of many innovative features, including a bicycle landing gear, and was designed around the most powerful jet engine of the day. It became the progenitor of a small family of bombers and refueling tankers, including the much-improved 3M and its versions. Many of the intended versions never materialized, and the Bison had its share of problems, but it came at just the right time, providing a valuable nuclear deterrent, and remained in service for 40 years until retired in compliance with the START treaty. The book charts the first Soviet strategic jet bomber's development and operational history. It includes the story of how the 3M was adapted to carry components of the Energiya/Buran space transport system as the VM-T Atlant outsize cargo transporter.
