Biological Dosimetry W. G. Eisert, M. L. Mendelsohn, 2012-12-06 In October 1982, a small international symposium was held at the Gesellschaft für Strahlen- und Umweltforschung mbH (GSF) in Munich as a satellite meeting of the IX International Conference on Analytical Cytology. The symposium focussed on cytometric approaches to biological dosimetry, and was, to the best of our knowledge, the first meeting on this subject ever held. There was strong encouragement from the 75 attendees and from others to publish a proceedings of the symposium. Hence this book, containing 30 of the 36 presentations, has been assembled. Dosimetry, the accurate and systematic determination of doses, usually refers to grams of substance administered or rads of ionization or some such measure of exposure of a patient, a victim or an experimental system. The term also can be used to describe the quantity of an ultimate, active agent as delivered to the appropriate target material within a biological system. Thus, for mutagens, one can speak of DNA dosimetry, meaning the number of adducts produced in the DNA of target cells such as bone-marrow stem cells or spermatogonia.

Dynasties David S. Landes, 2007-09-25 From the author of the New York Times

bestseller *The Wealth and Poverty of Nations*, a fascinating look at the crossroads of kin and coin David S. Landes has earned a reputation as a brilliant writer and iconoclast among economic historians. In his latest acclaimed work, he takes a revealing look at the quality that distinguishes a third of today's Fortune 500 companies: family ownership. From the banking fortunes of Rothschild and Morgan to the automobile empires of Ford and Toyota, Landes explores thirteen different dynasties, revealing what lay behind their successes-and how extravagance, bad behavior, and poor enterprise brought some of them to their knees. A colorful history that is full of surprising conclusions, *Dynasties* is an engrossing mix of ambition, eccentricity, and wealth.

Intersectionality and Social Change Lynne M. Woehrle, 2014-09-17 Volume 37 asks, what can the emerging discipline of intersectionality studies contribute to our quest to understand and analyze social movements, conflict and change? Through the intersectional lens questions often ignored and populations traditionally marginalized become the heart of the analysis.

Understanding European Movements Cristina Flesher Fominaya, Laurence Cox, 2013-07-18 European social movements have been central to European history,

politics, society and culture, and have had a global reach and impact. Yet they have rarely been taken on their own terms in the English-language literature, considered rather as counterpoints to the US experience. This has been exacerbated by the failure of Anglophone social movement theorists to pay attention to the substantial literatures in languages such as French, German, Spanish or Italian – and by the increasing global dominance of English in the production of news and other forms of media. This book sets out to take the European social movement experience seriously on its own terms, including: the European tradition of social movement theorising – particularly in its attempt to understand movement development from the 1960s onwards the extent to which European movements between 1968 and 1999 became precursors for the contemporary anti-globalisation movement the construction of the anti-capitalist movement of movements within the European setting the new anti-austerity protests in Iceland, Greece, Spain (15-M/Indignados), and elsewhere. This book offers a comprehensive, interdisciplinary perspective on the key European social movements in the past forty years. It will be of interest for students and scholars of politics and international relations, sociology, history, European studies and social theory.

Prospective Radiological Environmental Impact Assessment for Facilities and Activities International Atomic Energy Agency,2018 This Safety Guide provides recommendations and guidance on a general framework for performing prospective radiological impact assessments for facilities and activities, to estimate and control the radiological effects on the public and on the environment. This radiological environmental impact assessment is intended for planned exposure situations as part of the authorization process and, when applicable, as part of a governmental decision making process for facilities and activities. The situations covered in the assessment include both exposures expected to occur in normal operation as well as potential exposures. The assessment of the radiological impacts includes consideration of the risk of radiation effects for humans and for populations of non-human biota. ICRP Publication 100 ICRP,2007-05-26 This report provides reviews of information on the transit of materials through the alimentary tract and on radionuclide retention and absorption. It considers data on health effects, principally in order to specify the target cells for cancer induction within the mucosal lining of the tract and to justify approaches

taken to dose averaging within regions. Comparisons are made between doses calculated using the HATM and the Publication 30 model for examples of radionuclide ingestion for which absorption is assumed to occur in the small intestine alone. Examples are also given of the effect on doses of considering absorption from other regions and the effect of possible retention in the alimentary tract. This report also considers uncertainties in model assumptions and their effect on doses, including alimentary tract dimensions, transit times, radionuclide absorption values, and the location of targets for cancer induction.
