Block by Block William Glenn Robertson, Lawrence A. Yates, 2003 First published by the Combat Studies Institute Press. The resulting anthology begins with a general overview of urban operations from ancient times to the midpoint of the twentieth century. It then details ten specific case studies of U.S., German, and Japanese operations in cities during World War II and ends with more recent Russian attempts to subdue Chechen fighters in Grozny and the Serbian siege of Sarajevo. Operations range across the spectrum from combat to humanitarian and disaster relief. Each chapter contains a narrative account of a designated operation, identifying and analyzing the lessons that remain relevant today.

Basics of Geomatics Mario A. Gomasasca, 2009-09-18 Geomatics is a neologism, the use of which is becoming increasingly widespread, even if it is not still universally accepted. It includes several disciplines and techniques for the study of the Earth's surface and its environments, and computer science plays a decisive role. A more meaningful and appropriate expression is Geo-spatial Information or GeoInformation. Geo-spatial Information embeds topography in its more modern forms (measurements with electronic instrumentation, sophisticated techniques of data analysis and network compensation, global satellite positioning techniques, laser scanning, etc.), analytical and digital photogrammetry, satellite and airborne remote sensing, numerical cartography, geographical information systems, decision support systems, WebGIS, etc. These specialized fields are intimately interrelated in terms of both the basic science and the results pursued: rigid separation does not allow us to discover several common aspects and the fundamental importance assumed in a search for solutions in the complex survey context. The objective pursued by Mario A. Gomasasca, one that is only apparently modest, is to publish an integrated text on the surveying theme, containing simple and comprehensible concepts relevant to experts in Geo-spatial Information and/or specifically in one of the disciplines that compose it. At the same time, the book is rigorous and synthetic, describing with precision the main instruments and methods connected to the multiple techniques available today.

Complex Computing-Networks Izzet Cem Göknar, Levent Sevgi, 2006-05-31 This book contains the ceremonials and the proceedings pertaining to the International Symposium CCN2005 on "Complex Computing-Networks: A Link between Brain-like and Wave-Oriented Electrodynamics Algorithms," convened at Düzü University of Istanbul, Turkey, on 13–14 June 2005, in connection with the bestowal of the honorary doctorate degrees on Professors Leopold B. Felsen and Leon O. Chua, for their extraordinary achievements in electromagnetics, and nonlinear systems, respectively. The symposium was co-organized by Cem Göknar and Levent Sevgi, in consultation with Leopold B. Felsen and Leon O. Chua. Istanbul is a city with wonderful natural and historical surroundings, a city not only interconnecting Asia and Europe but also Eastern and Western cultures. Therefore, CCN2005 was a memorable event not only in the lifetime of Drs. Felsen, Chua, and their families, but also for all the other participants who were there to congratulate the recipients and participate in the symposium.

What You See Is What You Hear Dario Martinelli, 2020-01-01 What You See Is What You Hear develops a unique model of analysis that helps students and advanced scholars alike to look at audiovisual texts from a fresh perspective. Adopting an engaging writing style, the author draws an accessible picture of the field, offering several analytical tools, historical background, and numerous case studies. Divided into five main sections, the monograph covers problems of definitions, history, and most of all analysis. The first part raises the main problems related to audiovisuality, including taxonomical and historical questions. The second part provides the bases for the understanding of audiovisual creative communication as a whole, introducing a novel theoretical model for its analysis. The next three parts focus elaborate on the model in all its constituents and with plenty of case studies taken from the field of cinema, TV, music videos, advertising and other forms of audiovisuality. Methodologically, the book is informed by different paradigms of film and media studies, multimodality studies, structuralism, narratology, "auteur theory" in the broad sense, communication studies, semiotics, and the so-called "Numanities." What You See Is What You Hear enables readers to better understand how to analyze the structure and content of diverse audiovisual texts, to discuss their different idioms, and to approach them with curiosity and critical spirit.

The Commander's Handbook on the Law of Land Warfare (FM 6-27) (MCTP 11-10C) Headquarters Department Of The Army, 2019-09-17 DOD policy requires [m]embers of the DoD Components comply with the law of war during all armed conflicts, however such conflicts are characterized, and in all other military operations (Department of Defense Directive [DODD] 2311.01E). This publication addresses topics that are also addressed in the DOD Law of War Manual. In the event of a conflict or discrepancy regarding the legal standards addressed in this publication and the DOD Law of War Manual, the latter takes precedence. In many cases, any apparent conflict or discrepancy may be due to this publication's efforts to provide guidance to Commanders by describing legal concepts more generally rather than exhaustively as found in the DOD Law of War Manual. In certain instances, this publication will set out a current policy or practice for Army and Marine forces rather than a legal requirement.

Unified Action Partners' Quick Reference Guide United States Army, 2015-09-18 This quick reference guide describes U.S. Army organizations, planning, and operations. Unified action partners (UAPs) are those military forces, of the private sector with whom U.S. Army forces plan, coordinate, synchronize, and integrate during the conduct of operations (Army Doctrine Reference Publication 3-0, Unified Land Operations). UAPs include joint forces (activities in which elements of two or more U.S. military departments participate), multinational forces, and U.S. Government (USG) agencies and departments. The Iraq and Afghanistan wars highlight the necessity for collaboration, cooperation, and synchronization among USG, NGOs, and private sector agencies to focus the elements of national power in achieving national strategic objectives. Our experience in these conflicts accentuates the importance of foreign governments, agencies, and militaries participating, in concert with the United States, to achieve common objectives. Meeting the challenges of complex environments, infused with fragile or failing nation states, non-state actors, pandemics, natural disasters, and limited resources, requires the concerted effort of all instruments of U.S. national power plus foreign governmental agencies, military forces, and civilian organizations.

The Greatest Farce of History Gopal Chowdhary, 2014-03-04 The book seeks to analyse the faultlines and subversion in the ancient history of India in the praxis of social domination and systematic marginalization and obliteration of traditional political elites or traditional Kshatriya that social elites (Priestly class or caste) of ancient India achieved, just to maintain their socio-political domination and hegemony. This rather myopic act led to the balkanization of socio-political scape of mediaeval India resulting into subjugation, plunder and foreign invasions and rule for one thousand years. Through the case study of Krishna and Mahabharata period, the book tries to illuminate the so called Dark Age of the Indian history. Despite the numerous archaeological proves found in the form of Painted Grey Ware (PGW) associated with Mahabharata period and Black Red Ware (BRW) with different shades, associated with Krishna and Yadavas which tally with details of different scriptures and epic, nothing seems to be happening in this regard. This very fact seems to underline the continued saga of subversion and domination that seemed to have been ingrained in the post-Krishna-and-Mahabharata period. Once the deification and mystification of great historical personality and period such as Krishna and Mahabharata was started just to negate the socio-political revolutions ushered into, it seems to have continued and institutionalized.

Engineering Thermodynamics M. David Burghardt, James A. Harbach, 1999 Here is a comprehensive and comprehensible treatment of engineering thermodynamics from its theoretical foundations to its applications in real

situations. The thermodynamics presented will prepare students for later courses in fluid mechanics and heat transfer, and practicing engineers will find the applications helpful in their professional work. The book is appropriate for an introductory undergraduate course in thermodynamics and for a subsequent course in thermodynamic applications. The chapters dealing with steam power plants, internal combustion engines, and HVAC are unmatched. The introductory chapter on turbomachinery is also unique. A thorough development of the second law of thermodynamics is provided in chapters 7-9. The ramifications of the second law receive thorough discussion; the student not only performs calculations, but understands the implications of the calculated results. Computer models created in TK Solver accompany each chapter and are particularly useful in the application areas. The TK Solver files provided with the book can be used as written or modified and merged into models developed to analyze new problems. The book has two particularly important strengths: its readability and the depth of its treatment of applications. The readability will make the content understandable to the average students; the depth in applications will make the book suitable for applied upper-level courses as well.

Revival: Anglo Russian Relations 1689-1943 (1944) John Arthur Ransome Marriott, 2018-03-14 This book has been written by an exile deprived by a German bomb of access to all but a fragment of his own library, and to practically the whole of his carefully collected memoranda, and is also denied by circumstances the use of any great library. The book still aims to discuss Anglo Russian Relations between 1689 and 1943.

Documents on the Laws of War Adam Roberts, Richard Guelff, 1989 The first edition of this book became a standard work in the field, and it has been extensively revised and updated for the second edition. It is prepared with assistance from the official Depositaries of the various international agreements, and is an essential reference book for statesmen and diplomats, lawyers, journalists, and students of international relations and law. From reviews of the first edition: 'Roberts and Guelff rely on the documents to speak for themselves, and are right to do so. Their becoming generally available in this neat and usable form is an event of much importance for all who take a serious interest in humanitarian law and endeavour, and the limitation of men's violence towards men.' New Society

Decommissioning of Small Medical, Industrial and Research Facilities International Atomic Energy Agency, 2011 Decommissioning activities for zero-power reactors, radio-diagnostic and radiotherapy hospital departments and laboratories and factories using radioactive material may be erroneously perceived as trivial and of low priority. This publication provides practical information, experience and assistance aimed at a broad spectrum of practitioners who are faced with decommissioning of such small nuclear facilities. Particular consideration is given to the financial and scientific resources, and early planning, which are all factors essential to efficient and effective decommissioning. It is written as a simplified, stepwise approach for guidance to nuclear operators who may have little or no experience in decommissioning. An accompanying CD contains practical information in two Annexes, including descriptions of decommissioning projects problems encountered, solutions and analyses, and lessons learned--Provided by publisher.

Russia's New Ground Forces Igor Sutyagin, Justin Bronk, 2017-12-22 This Whitehall Paper provides an in-depth analysis of Russia's Ground Forces, including airborne and naval troops. It examines their role in Russian foreign policy, reforms to units' equipment and operational roles, performance during combat operations against Ukraine, and current unit deployment locations and purposes in the Central, Southern and Western Military Districts. Russia perceives itself as operating from a position of weakness and surrounded by superior NATO forces. It is pursuing a programme of military reform, both in terms of equipment and structures. The Russian Ground Forces are being geared towards fighting in aggressive, short, sharp and complex operations into enemy territory, as well as being streamlined to increase readiness levels and deployability at short notice. However, operations against Ukraine have required force generation efforts from almost every Russian Ground Forces formation, including those in the Far East, which is evidence that the Kremlin's ability to sustain even a moderate tempo of operations in the medium term is limited. Furthermore, chronic undermanning and morale issues remain, which will be exacerbated by the political decision to re-establish division-scale formations. In addition, Western sanctions and Russia's difficult economic situation are severely hampering efforts to extend equipment reforms across the whole force. Russian Ground Forces should not be seen by the West as an unstoppable colossus. However, the West must not ignore the unmistakable Russian efforts to prepare for offensive, high-tempo operations against NATO, and the formidable political will that will use them if given the opportunity.

The Madrid Codex Gabrielle Vail, Anthony Aveni, 2009-03-31 This volume offers new calendrical models and methodologies for reading, dating, and interpreting the general significance of the Madrid Codex. The longest of the surviving Maya codices, this manuscript includes texts and images painted by scribes conversant in Maya hieroglyphic writing, a written means of communication practiced by Maya elites from the second to the fifteenth centuries A.D. Some scholars have recently argued that the Madrid Codex originated in the Petén region of Guatemala and postdates European contact. The contributors to this volume challenge that view by demonstrating convincingly that it originated in northern Yucatán and was painted in the Pre-Columbian era. In addition, several contributors reveal provocative connections among the Madrid and Borgia group of codices from Central Mexico. Contributors include: Harvey M. Bricker, Victoria R. Bricker, John F. Chuchiak IV, Christine L. Hernández, Bryan R. Just, Merideth Paxton, and John Pohl. Additional support for this publication was generously provided by the Eugene M. Kayden Fund at the University of Colorado.

Decommissioning of Nuclear Power Plants and Research Reactors International Atomic Energy Agency, 1999 This Safety Guide addresses the subject of how to meet the requirements for decommissioning of nuclear power plants and research reactors. It provides guidance to national authorities and operating organizations on the planning and safe management of the decommissioning of such installations.

How to Pass OSCP Series: Windows Privilege Escalation Step-By-Step Guide Alan Wang, 2020-11-13 This book is the first of a series of How To Pass OSCP books and focus on techniques used in Windows Privilege Escalation. This is a step-by-step guide that walks you through the whole process of how to escalate privilege in Windows environment using many common techniques. We start by gathering as much information about the target as possible either manually or using automated scripts. Next, we search for misconfigured services or scheduled tasks, insufficient file permission on binaries or services, vulnerable kernel, vulnerable software running with high privileges, sensitive information stored on local files, credential saved in the memory, registry settings that always elevate privileges before executing a binary, hard-coded credential contained in the application configuration files, and many more. Commander's Handbook for Assessment Planning and Execution Joint Staff,2012-10-16 This handbook provides an understanding of the processes and procedures being employed by joint force commanders and their staffs to plan and execute assessment activities. It provides fundamental principles, techniques, and considerations related to assessment that are being employed in the field and are evolving toward incorporation in joint doctrine. Furthermore, this handbook supplements doctrinal publications by providing detailed guidance to conduct effects assessment, task assessment, and deficiency analysis. Commanders, assisted by their staffs and subordinate commanders, along with interagency and multinational partners and other stakeholders, will continuously assess the operational environment and the progress of the operation toward the desired end state in the time frame desired. Based on their assessment, commanders direct adjustments, thus ensuring the operation remains focused on accomplishing the mission. Assessment is applicable across the range of military operations. It offers perspective and insight, and provides the opportunity for self-correction, adaptation, and thoughtful results-oriented learning. Assessment is a key component of the commander's decision cycle, helping to determine the results of tactical actions in the context of overall mission objectives and providing potential recommendations for the refinement of future plans. Assessments provide the commander with the current state of the operational environment, the progress of the campaign or operation, and recommendations to account for discrepancies between the actual and predicted progress. Commanders then compare the assessment against their vision and intent and adjust operations to ensure objectives are met and the military end state is achieved. First, assessment must determine where we are. The assessment process must examine the data received and determine, in relation to the desired effects, the current status of the operation and the operational environment. This is the most basic and fundamental question that assessment must answer. The second fundamental issue that assessment must address is so what and why (i.e., what does the data mean and what is its significance)? To answer this question, the assessment team will examine the measure of effectiveness indicators, both individually and in relation to each other. Finally, and perhaps most importantly, assessment must begin to address the what's next? Assessment must combine the analysis of the where we are and the so what and develop thoughtful, logical guidance for the command's planning efforts. Assessments are interrelated and interdependent. Although each level of assessment may have a specific focus and a unique battle rhythm, together they form a hierarchical structure in which the conduct of one level of assessment is crucial to the success of the next. Theater strategic and operational-level assessment efforts concentrate on broader tasks, effects, objectives, and progress toward the end state, while tactical-level assessment primarily focuses on task accomplishment. This handbook provides users with a pre-doctrinal reference describing how to conduct assessment execution and planning. Its primary purpose is to improve the US military's assessment process through educating the user on basics, best practices, and processes. This handbook was developed based on observations at combatant commands as well as joint task force staffs. It was developed in close coordination with, and used significant input from, both civilian and military subject matter experts. Assessment is a collaborative effort between the joint force, interagency and multinational partners, and other stakeholders. As such, this handbook addresses the necessity for an inclusive assessment process and effort at every level. It also presents some assessment resources developed by other stakeholders and currently in use throughout the world.
