*The Other Canon of Economics, Volume 2* Erik Reinert,2024-02-13 Other Canon Economics: Essays in the Theory and History of Uneven Economic Development brings together key essays on development economics from one of the most prolific and important development economists and historians of economic policy today. Erik S. Reinert argues through essays ranging from 1994 to 2020 that neo-classical economics damages developing countries, mostly via adherence to the theory of comparative advantage. Based on a long intellectual tradition, started by the Italian economists Giovanni Botero (1589) and Antonio Serra (1613), Reinert shows that the country which trades increasing returns goods – e.g. high-end manufacture – has advantages over the country which trades diminishing returns goods – e.g. commodities. This has important implications for today's development strategies that, Reinert argues, should be seen as industrial strategies.

**Autoworkers Under the Gun** Gregg Shotwell,2012-02-14 The veteran autoworker and author of the pro-labor newsletter Live Bait & Ammo offers a blow-by-blow analysis of workers' rights under attack. Greg Shotwell was a machine operator at General Motor's Delphi division during its tragic spinoff from GM and eventual bankruptcy. He watched from a front-row seat as the United Auto Workers Union collaborated with antilabor policies that led to plant closings and cuts to wages and benefits. A dissident member of the UAW, Shotwell made a name for himself chronicling the outrages and absurdities of corporate managers and corrupt union leaders in his popular shop-floor newsletter, Live Bait & Ammo. Autoworkers Under the Gun collects Shotwell's essential writings during that fateful period. These LB&A fliers quickly grew legs of their own, distributed by rank-and-file workers in auto plants across the United States and cited by industry analysts. Spanning a decade of autoworker resistance, this body of work stands as a call to action for a new generation of workers coming of age in recession-wracked America.

**Birkbeck Word Association Norms** Helen Moss,Lianne Older,1996 This is a reference work containing free association norms for over 2000 words in the English language collected over the last eight years from groups of 40-50 British English speakers aged between 17 and 45. These norms provide the information that, for example, 67% of people give dog as the first word they think of in response to the word cat, that 24% give the word society in response to the word pillar, and given the name Michael, 65% say Jackson, whereas less than 5% say Heseltine or Caine. These norms will be of use to researchers and students in many fields of psychology, especially language and memory, where the degree of association between pairs of words is often an important experimental variable. The main part of the book contains an alphabetical list of all associative responses and their frequency for each of the 2464 stimulus words. In addition, there is an index of stimulus words organised according to semantic category to aid selection of experimental materials. Full methodological details of the collection and compilation of the data are also provided in the introduction.

*Strengthening Forensic Science in the United States* National Research Council,Division on Engineering and Physical Sciences,Committee on Applied and Theoretical Statistics,Policy and Global Affairs,Committee on Science, Technology, and Law,Committee on Identifying the Needs of the Forensic Sciences Community,2009-07-29 Scores of talented and dedicated people serve the forensic science community, performing vitally important work. However, they are often constrained by lack of adequate resources, sound policies, and national support. It is clear that change and advancements, both systematic and scientific, are needed in a number of forensic science disciplines to ensure the reliability of work, establish enforceable standards, and promote best practices with consistent application. Strengthening Forensic Science in the United States: A Path Forward provides a detailed plan for addressing these needs and suggests the creation of a new government entity, the National Institute of Forensic Science, to establish and enforce standards within the forensic science community. The benefits of improving and regulating the forensic science disciplines are clear: assisting law enforcement officials, enhancing homeland security, and reducing the risk of wrongful conviction and exoneration. Strengthening Forensic Science in the United States gives a full account of what is needed to advance the forensic science disciplines, including upgrading of systems and organizational structures, better training, widespread adoption of uniform and enforceable best practices, and mandatory certification and accreditation programs. While this book provides an essential call-to-action for congress and policy makers, it also serves as a vital tool for law enforcement agencies, criminal prosecutors andattorneys, and forensic science educators.
