*Metabolism, the City of the Future* ,2011 First presented as a manifesto in the 1960s in Japan, Metabolism is a theory of architecture contending that buildings and cities should be designed and developed in the same continuous way that the material substance of a natural organism is produced. From the time of Japan's postwar redevelopment to its period of rapid economic growth, the theory gave birth to grand visions of future cities, encouraged the realization of much experimental architecture, and also provided the foundation on which many of Japan's contemporary world-renowned architects and designers could build their careers. It is the most widely known modern architecture theory to have emerged from Japan. This exhibition is the first ever to pose the question of what significance Metabolism holds today. It draws on various documents and models to explore the thoughts and work of Tange Kenzo, which set the scene for the emergence of Metabolism, and the activities of the Metabolist architects and others during the 1960s up until Osaka's Expo '70, which in many ways was a showcase for the theory. It also represents an important opportunity to think about the necessity of archiving and preserving distinguished historical documents and records related to the movement.

*Bicycles in American Highway Planning* Bruce D. Epperson,2014-11-25 The United States differs from other developed nations in the extent to which its national bicycle transportation policy relies on the use of unmodified roadways, with cyclists obeying the same traffic regulations as motor vehicles. This policy—known as “vehicular cycling”—evolved between 1969, when the “10-speed boom” saw a sharp increase in adult bicycling, and 1991, when the American Association of State Highway and Transportation Officials adopted an official policy that on-road bikeways were not desirable. This policy resulted from a growing realization by highway engineers and experienced club cyclists that they had parallel interests: the cyclists preferred to ride on highways, because most bikeways were not designed for high speeds and pack riding; and the highway engineers did not want to divert funding from roadways to construct bikeways. Using contemporary magazine articles, government reports, and archival material from industry lobbying groups and national cycling organizations, this book tells the story of

how America became a nation of bicyclists without bikeways.
