US Nuclear Submarines Jim Christley, 2012-01-20 The adoption of nuclear power revolutionized submarine design and means that vessels can stay underwater for months, trailing the enemy or training weapons on land targets from secret positions, "always there, never seen." Jim Christley, a former submariner, explores here the influence of Admiral Hyman Rickover in cautiously introducing these stealthy machines of war, and frankly discusses the power and perils of using nuclear reactors at sea. Using unique and detailed artwork, he outlines the many evolving aspects of design within the submarine classes, from the very first nuclear submarine, USS Nautilus, to the classes under construction even now.

Run Silent, Run Deep Edward L. Beach, 2016-10-15 This is a story of the silent service—the submarine crews which destroyed the Japanese merchant marine. A narrative taut with drama, told with the intimacy of a confession, it deals with two strong-headed men: their loves, their jealousies, and their destinies in the lonely and desperate struggle between the hunter and the hunted. Few war novels will rival *Run Silent, Run Deep* in the naked realism of its action. None will surpass its rising excitement and brilliant descriptions of men in combat. Unlike many war novels, here is a story that deals with war from the perspective of command. Edward Beach re-creates with fidelity the anguish, agony, and triumphs of command decisions. In Commander Richardson, he has created a character who embodies all that is fine, all that is human, in an excellent naval officer. In a sense, *Run Silent, Run Deep* is a monument, not to the misfits and the mistakes, but to those men who rose to greatness under the sometimes unbearable tensions of action.

Rickover and the Nuclear Navy Francis Duncan, 1990 An official Atomic Energy Commission historian assigned to Admiral Rickover's office, Duncan draws on files, documents, and interviews to chronicle the introduction of nuclear powered ships into the US Navy. Covers the period from the mid-1950s to the early 1980s. Annotation copyrighted by Book News, Inc., Portland, OR

The Russian Northern Fleet Thomas Nilsen, Igor Kudrik, Alexandr Nikitin, 1996

British Submarines in Two World Wars Norman Friedman, 2019-03-30 An "indispensable" guide to the Royal Navy's submarines through 1945, with numerous photos and original plans (The Naval Review). The Royal Navy didn't invent the submarine—but in 1914, Britain had the largest submarine fleet in the world, and at the end of World War I it had some of the largest and most unusual of all submarines—whose origins and designs are all detailed in this book. During the First World War they virtually closed the Baltic to German iron ore traffic, and blocked supplies to the Turkish army at Gallipoli. They were a major element in the North Sea battles, and fought the U-boat menace. During World War II, US submarines were known for strangling Japan, but lesser known is the parallel battle by British submarines in the Mediterranean to strangle the German army in North Africa. Like their US counterparts, interwar British submarines were designed largely with the demands of a possible Pacific War, though that was not the war they fought. The author also shows how the demands of such a war, fought over vast distances, collided with interwar British Government attempts to limit costs. It says much about the ingenuity of British submarine designers that they met their requirements despite enormous pressure. The author shows how evolving strategic and tactical requirements and evolving technology produced successive types of design. British submariners contributed much to the development of anti-submarine tactics and technology, beginning with largely unknown efforts before World War I. Between the wars, they exploited the new technology of sonar (Asdic), and as a result pioneered submarine silencing, with important advantages to the US Navy as it observed the British. They also pioneered the vital postwar use of submarines as anti-submarine weapons, sinking a U-boat while both were submerged. Heavily illustrated with photos and original plans and incorporating much original analysis, this book is ideal for naval historians and enthusiasts. "Sure to become the standard reference for British submarine development for years to come" —Warship

Navy Columbia (SSBN-826) Class Ballistic Missile Submarine Program Ronald O'Rourke, 2019-10-21 The Columbia (SSBN-826) class program is a program to design and build a class of 12 new ballistic missile submarines (SSBNs) to replace the Navy's current force of 14 aging Ohio-class SSBNs. The Navy has identified the Columbia-class program as the Navy's top priority program. The Navy wants to procure the first Columbia-class boat in FY2021. Research and development work on the program has been underway for several years, and advance procurement (AP) funding for the program began in FY2017. The Navy's proposed FY2020 budget requests \$1,698.9 million in advance procurement (AP) funding and \$533.1 million in research and development funding for the program. The Navy's FY2020 budget submission estimates the total procurement cost of the 12-ship class at \$109.0 billion in then-year dollars. An April 2018 Government Accountability Office (GAO) report assessing selected major DOD weapon acquisition programs stated that the estimated total acquisition cost of the Columbia-class program is \$102,075.3 million (about \$102.1 billion) in constant FY2018 dollars, including \$12,901.0 million (about \$12.9 billion) in research and development costs and \$89,174.3 million (about \$89.2 billion) in procurement costs.

Rig Ship for Ultra Quiet Andrew Karam, 2002-01-01 You've seen *The Hunt for Red October* and wondered if it was real. Now you'll know. *Rig Ship for Ultra Quiet* -- a book about submarines, written by a submariner. Spend two months in a nuclear fast attack submarine off the coast of the Soviet Union at the end of the Cold War with Andrew Karam, a decorated veteran of the US submarine force.

British Cruisers of the Victorian Era Norman Friedman, 2012-10-29 Gradually evolving from the masted steam frigates of the mid-nineteenth century, the first modern cruiser is not easy to define, but for the sake of this book the starting point is taken to be Iris and Mercury of 1875. They were the RN's first steel-built warships; were designed primarily to be steamed rather than sailed; and formed the basis of a line of succeeding cruiser classes. The story ends with the last armoured cruisers, which were succeeded by the first battlecruisers (originally called armoured cruisers), and with the last Third Class Cruisers (Topaze class), all conceived before 1906. Coverage, therefore, dovetails precisely with Friedman's previous book on British cruisers, although this one also includes the wartime experience of the earlier ships. The two central themes are cruisers for the fleet and cruisers for overseas operations, including (but not limited to) trade protection. The distant-waters aspect covers the belted cruisers, which were nearly capital ships, intended to deal with foreign second-class battleships in the Far East. The main enemies contemplated during this period were France and Russia, and the book includes British assessments of their strength and intentions, with judgements as to how accurate those assessments were. As would be expected of Friedman, the book is deeply researched, original in its analysis, and full of striking insights — another major contribution to the history of British warships.

Report on the Bottom-up Review United States. Department of Defense, Les Aspin, 1993 In March 1993, Secretary of Defense Aspin initiated a comprehensive review of the nation's defense strategy, force structure, modernization, infrastructure, and foundations. He felt that a department-wide review needed to be conducted from the bottom up because of the dramatic changes that have occurred in the world as a result of the end of the Cold War and the dissolution of the Soviet Union. These changes in the international security environment have fundamentally altered America's security needs. Thus, the underlying premise of the Bottom-Up Review was that we needed to reassess all of our defense concepts, plans, and programs from the ground up. This final report on the Bottom-Up Review provides the results of that unprecedented and collaborative effort. It represents the product of hundreds of individuals' labor and dedication. It describes the extensive analysis that went into the review and the recommendations and decisions that emerged.

Introduction to Sonar United States. Bureau of Naval Personnel, 1968 Fundamentals of sonar systems are presented in this book, prepared for both regular navy and naval reserve personnel who are seeking advancement in rating. An introductory description is first made of submarines and antisubmarine units. Determination of underwater targets is analyzed from the background of true and relative bearings, true and relative motion, and computation of target angles. Then, applications of both active and passive sonars are explained in connection with bathythermographs, fathometers, tape recorders, fire control techniques, internal and external communications systems, maintenance actions, test methods and equipment, and safety precautions. Basic principles of sound and temperature effects on wave propagation are also discussed. Illustrations for explanation use, information on training films and the sonar technician rating structure are also provided.

Rickover Norman Polmar, Thomas B. Allen, 1982 Examines the life, career, controversies, accomplishments, and blunders of the man in charge of the Navy's nuclear power program for over 30 years.
