**Islamic History** R. Stephen Humphreys, 2020-06-16 This book will be immensely helpful to those who wish to orient themselves to what has become a very large body of literature on medieval Islamic history. Combining a bibliographic study with an inquiry into method, it opens with a survey of the principal reference tools available to historians of Islam and a systematic review of the sources they will confront. Problems of method are then examined in a series of chapters, each exploring a broad topic in the social and political history of the Middle East and North Africa between A.D. 600 and 1500. The topics selected represent a cross-section of Islamic historical studies, and range from the struggles for power within the early Islamic community to the life of the peasantry. Each chapter pursues four questions. What concrete research problems are likely to be most challenging and productive? What resources do we possess for dealing with these problems? What strategies can we devise to exploit our resources most effectively? What is the current state of the scholarly literature for the topic under study?

**Stability of Structures by Finite Element Methods** Z. Waszczyszyn, Cz. Cichon, M. Radwanska, 2013-10-22 This book is the consequence of research undertaken by the authors in the field of advanced problems of structural mechanics. Stability analysis of structures comes under this area because of the complex models and computational methods needed for analysis. In the mid seventies, a joint effort began between a group of researchers and teachers of the Department of Civil Engineering and Computer Center of the Cracow University of Technology. One of the important results of the collaboration has been this publication.

**Optimal Control of Differential and Functional Equations** J. Warga, 2014-05-10 Optimal Control of Differential and Functional Equations presents a mathematical theory of deterministic optimal control, with emphasis on problems involving functional-integral equations and functional restrictions. The book reviews analytical foundations, and discusses deterministic optimal control problems requiring original, approximate, or relaxed solutions. Original solutions involve mathematicians, and approximate solutions concern engineers. Relaxed solutions yield a complete theory that encompasses both existence theorems and necessary conditions. The text also presents general optimal control problems, optimal control of ordinary differential equations, and different types of functional-integral equations. The book discusses control problems defined by equations in Banach spaces, the convex cost functionals, and the weak necessary conditions for an original minimum. The text illustrates a class of ordinary differential problems with examples, and explains some conflicting control problems with relaxed adverse controls, as well as conflicting control problems with hyper-relaxed adverse controls. The book is intended for mature mathematicians, graduate students in analysis, and practitioners of optimal control whose primary interests and training are in science or engineering.

**Progress in Medicinal Chemistry** , 1988-01-01 There are five main subject areas in this volume in the series on medicinal chemistry. The first is a review of the understanding of Alzheimer's disease and the development of drugs for its treatment; the second, looking at recent efforts in modifying a naturally occurring anticancer (camptothecin) for chemotherapy; the third covers the problem of getting a drug to a specific site within the context of phosphates and phosphonates; a survey of sterilization using aldehydes for the destruction of microbes both inside and outside the human body is reviewed in the fourth; and the last chapter is an account of the progress made in the biologically active enantiomer for complex synthetic asymmetric drug molecules.
