Seeking Success in E-Business Kim Viborg Andersen, Steve Elliot, Paula M.C. Swatman, E.M. Trauth, Niels Bjørn-Andersen, 2013-06-29 In the foreword to this volume of conference proceedings for IFIP Working Group 8.4, it is appropriate to review the wider organization to which the Working Group belongs. The International Federation of Information Processing (IFIP) is a non-governmental, non-profit umbrella organization for national societies working in the field of information processing that was established in 1960 under the auspices of UNESCO. IFIP's mission is to be the leading, truly international, apolitical organization which encourages and assists in the development, exploitation and application of Information Technology for the benefit of all people. At the heart of IFIP lie its Technical Committees that, between them, count on the active participation of some two thousand people world-wide. These Groups work in a variety of ways to share experience and to develop their specialised knowledge. Technical Committees include: TC 1. Foundations of Computer Science; TC 2: Software: Theory and Practice; TC 3: Education; TC 6: Communication Systems; TC 7: System Modelling and Optimization; TC 9: Relationship between Computers and Society; TC 11: Security and Protection in Information Processing Systems; TC 12: Artificial Intelligence and TC 13: Human-Computer Interaction. The IFIP website www.ifip.org) has further details. Technical Committee 8 (TC8) is concerned with Information Systems in organisations. Within TC8 there are different Working Groups focusing on particular aspects of Information Systems.

Islamic History R. Stephen Humphreys,2020-06-16 This book will be immensely helpful to those who wish to orient themselves to what has become a very large body of literature on medieval Islamic history. Combining a bibliographic study with an inquiry into method, it opens with a survey of the principal reference tools available to historians of Islam and a systematic review of the sources they will confront. Problems of method are then examined in a series of chapters, each exploring a broad topic in the social and political history of the Middle East and North Africa between A.D. 600 and 1500. The topics selected represent a cross-section of Islamic historical studies, and range from the struggles for power within the early Islamic community to the life of the peasantry. Each chapter pursues four questions. What concrete research problems are likely to be most challenging and productive? What resources do we possess for dealing with these problems? What strategies can we devise to exploit our resources most effectively? What is the current state of the scholarly literature for the topic under study?

Garments of Paradise Susan Elizabeth Ryan,2014-06-13 A historical and critical view of wearable technologies that considers them as acts of communication in a social landscape. Wearable technology—whether a Walkman in the 1970s, an LED-illuminated gown in the 2000s, or Google Glass today—makes the wearer visible in a technologically literate environment. Twenty years ago, wearable technology reflected cultural preoccupations with cyborgs and augmented reality; today, it reflects our newer needs for mobility and connectedness. In this book, Susan Elizabeth Ryan examines wearable technology as an evolving set of ideas and their contexts, always with an eye on actual wearables—on clothing, dress, and the histories and social relations they represent. She proposes that wearable technologies comprise a pragmatics of enhanced communication in a social landscape. "Garments of paradise" is a reference to wearable technology's promise of physical and mental enhancements. Ryan defines "dress acts"—hybrid acts of communication in which the behavior of wearing is bound up with the materiality of garments and devices—and focuses on the use of digital technology as part of such systems of meaning. She connects the ideas of dress and technology historically, in terms of major discourses of art and culture, and in terms of mass media and media culture, citing such thinkers as Giorgio Agamben, Manuel De Landa, and Gilles Deleuze and Félix Guattari. She examines the early history of wearable technology as it emerged in research labs; the impact of ubiquitous and affective approaches to computing; interaction design and the idea of wearable technology as a language of embodied technology; and the influence of open source ideology. Finally, she considers the future, as wearing technologies becomes an increasingly naturalized aspect of our social behavior.

Joint Obligations Glanville Llewelyn Williams,1997 This book discusses a difficult and seriously defective part of the common law. Considering its practical importance, the subject of joint promises has received surprisingly little attention. Noting is commoner than for a contractual promise to be made by more than one party; yet the rules relating to joint promises are accorded little space in the English textbooks on contract, even where they are not entirely ignored. Partial expositions are to be found in works on partnership, bankruptcy, suretyship, negotiable instruments, executors, and procedure, but there is no modern monograph devoted to the subject as a whole. It is hoped that the present work will fill this gap. -- from the author's Preface, p. 3.
