Ryan Ferrier

Numerical C Philip Joyce, 2019-09-20 Learn applied numerical computing using the C programming language, starting with a quick primer on the C programming language and its SDK. This book then dives into progressively more complex applied math formula for computational methods using C with examples throughout and a larger, more complete application towards the end. Numerical C starts with the quadratic formula for finding solutions to algebraic equations that model things such as price vs. demand or rise vs. run or slip and more. Later in the book, you'll work on the augmented matrix method for simultaneous equations. You'll also cover Monte Carlo method model objects that could arise naturally as part of the modeling of a real-life system, such as a complex road network, the transport of neutrons, or the evolution of the stock market. Furthermore, the Monte Carlo method of integration examines the area under a curve including rendering or ray tracing and the shading in a region. Furthermore, you'll work with the product moment correlation coefficient: correlation is a technique for investigating the relationship between two quantitative, continuous variables, for example, age and blood pressure. By the end of the book, you'll have a feeling for what computer software could do to help you in your work and apply some of the methods learned directly to your work. What You Will Learn Gain software and C programming basics Write software to solve applied, computational mathematics problems Create programs to solve equations and calculus problems Use the trapezium method, Monte Carlo method, line of best fit, product moment correlation coefficient, Simpson's rule, and matrix solutions Write code to solve differential equations Apply one or more of the methods to an application case study Who This Book Is For Those with an existing knowledge of rudimentary mathematics (school level) and some basic programming experience. This is also important to people who may work in mathematics or other areas (for example, life sciences, engineering, or economics) and need to learn C programming.

Basics of C Programming, BASICS OF C PROGRAMMING is a handbook for students studying BCA, B.Sc. (Computer Science), B.Sc. (Information Technology) B.Sc. (Mathematics), B.Sc. beginners find it difficult to understand C language and its applications due to lack of proper materials, planning and proper guidance. This book will help these students as it covers the topics (as per syllabus) with proper explanation and examples. The texts used in this book are written in simple language in order to reduce complications among the students.

Progress in Thermochemical Biomass Conversion A. V. Bridgwater, 2008-04-30 This book is for chemical engineers, fuel technologists, agricultural engineers and chemists in the world-wide energy industry and in academic, research and government institutions. It provides a thorough review of, and entry to, the primary and review literature surrounding the subject. The authors are internationally recognised experts in their field and combine to provide both commercial relevance and academic rigour. Contributions are based on papers delivered to the Fifth International Conference sponsored by the IEA Bioenergy Agreement.

Combinatorial Maps Guillaume Damiand,Pascal Lienhardt,2014-09-19 A Versatile Framework for Handling Subdivided Geometric Objects
Combinatorial Maps: Efficient Data Structures for Computer Graphics and Image Processing gathers important ideas related to combinatorial maps and explains how the maps are applied in geometric modeling and image processing. It focuses on two subclasses of combinatorial maps: n-Gmaps and n-

maps. Suitable for researchers and graduate students in geometric modeling, computational and discrete geometry, computer graphics, and image processing and analysis, the book presents the data structures, operations, and algorithms that are useful in handling subdivided geometric objects. It shows how to study data structures for the explicit representation of subdivided geometric objects and describes operations for handling the structures. The book also illustrates results of the design of data structures and operations.

The Problematic Structure of Management of Co-Owned Properties in Turkish Law and Pursuance of Solutions Eylem

Apaydin,2011-01-18 This book provides a critical evaluation of the statutory framework for co-ownership regulations in Turkish law and it acquaints Turkish jurists with the existence of trust of land in English law. It is posited upon the argument that solutions to the problems observed in the administration and enjoyment of co-owned properties in Turkish law may be overcome by the introduction of a new institution, which is inspired by the trust mechanism in English law. This renders the existing Turkish regulation for the management of the co-owned properties outdated, unreasonably complex, and extremely artificial with some assumptions. After successfully establishing that the Turkish system is currently inadequate to provide an efficient system, this book provides the indications for a solution. Being aware of the limitations of the Turkish legal system and the restricted possibility of the direct reception of trust, this book examines to what extent the current institutions in Turkish law would replace the functions of trust in the context of co-ownership. This examination results in searching for a new system as it is concluded that any of the trust-like devices in the current Turkish law could not effectively and comprehensively serve the purposes that the English trust does. Therefore, this book suggests that a new mechanism, inspired by the English trust of land, would provide the required mechanisms for an efficient managerial system for co-owned properties. Rather than asserting to solely focus on a comprehensive new system, this book discusses the possible solutions and urges further research about the matter. Hence, the so-called alien system, trust of land, and its capability to provide an alternative but efficient and productive solution to the managerial problems of the co-owned properties, would be made familiar with the Turkish jurists.

65 Case Study Ideas In Production,operation,supply Chain And Logistics Management Dr. Asim Kumar Bandyopadhyay,2022-04-26 This book is a compilation of case study ideas in the areas of production, operation, supply chain and logistics management (POM-SCL) ,also incorporating operation strategies. This book has been designed conforming to the standards of this common subject for the courses of Master of Business Administration (MBA) and Post Graduate Diploma in Management (PGDM) prescribed by the All India Council of Technical Education (AICTE) and University Grants Commission (UGC). The book consists of sixty five case study ideas covering almost the entire gamut of the subject concerned. All these cases are based on Indian organizations/industries using the characters with names typically Indian and the narrations of these cases reflect Indian work culture, value systems and ethos. All these cases are followed by a set of about half a dozen questions pertaining to the narrations with the corresponding answers suggested for the guidance of the teachers and the students alike. Apart from making the book very convenient and handy for studying the subject, it is also aimed at dispelling fears and apprehensions among the students with non -science/non-technical background that they seem to have about this subject. Getting familiar with the numerical exercises given and solved in this book by practice will make passing this subject a cakewalk for any average student. The cases are so designed as to expose the students to the realities and challenges to the actual professional life while still seating in the class rooms, much before entering a professional career. The book provides a colossal value addition as both a complement and a supplement to the theories in the text books.
