White Death - Blizzard of '77 Erno Rossi,1999 The Blizzard of 1977 was a deadly blizzard that hit the Western N.Y. state area upstate New York and Southern Ontario from January 28 to February 1, 1977. Daily peak wind gusts ranging from 46 to 69 mph were recorded by the National Weather Service Buffalo Office, with snowfall as high as 100 in recorded in areas, and the high winds blew this into drifts of 30 to 40 ft. There were 23 total storm-related deaths in western New York, with 5 more in northern New York. Certain pre-existing weather conditions exacerbated the blizzard's effects. November, December and January average temperatures were much below normal. Lake Erie froze over by December 14; an ice-covered Lake Erie usually puts an end to lake-effect snow because the wind cannot pick up moisture from the lake's surface, convert the moisture to snow and then dump it when the winds reach shore. Lake Erie was covered by a deep, powdery snow; January's unusually cold conditions limited the usual thawing and refreezing, so the snow on the frozen lake remained powdery. The drifted snow on roadways was difficult to clear because the strong wind packed the snow solidly.

Declaring Disaster Timothy W. Kneeland,2021-05-25 On Friday, January 28, 1977, it began to snow in Buffalo. The second largest city in New York State, located directly in line with the Great Lakes' snowbelt, was no stranger to this kind of winter weather. With their city averaging ninety-four inches of snow per year, the citizens of Buffalo knew how to survive a snowstorm. But the blizzard that engulfed the city for the next four days was about to make history. Between the subzero wind chill and whiteout conditions, hundreds of people were trapped when the snow began to fall. Twenty-to thirty-foot-high snow drifts isolated residents in their offices and homes, and even in their cars on the highway. With a dependency on rubber-tire vehicles, which lost all traction in the heavily blanketed urban streets, they were cut off from food, fuel, and even electricity. This one unexpected snow disaster stranded tens of thousands of people, froze public utilities and transportation, and cost Buffalo hundreds of millions of dollars in economic losses and property damages. The destruction wrought by this snowstorm, like the destruction brought on by other natural disasters, was from a combination of weather-related hazards and the public policies meant to mitigate them. Buffalo's 1977 blizzard, the first snowstorm to be declared a disaster in US history, came after a century of automobility, suburbanization, and snow removal guidelines like the bare-pavement policy. Kneeland offers a compelling examination of whether the 1977 storm was an anomaly or the inevitable outcome of years of city planning. From the local to the state and federal levels, Kneeland discusses governmental response and disaster relief, showing how this regional event had national implications for environmental policy and how its effects have resounded through the complexities of disaster politics long after the snow fell.

Buffalo Blizzard of 1977 Timothy W. Kneeland,2017-01-23 The Blizzard of 1977 is still remembered in Western New York, especially in Buffalo, which received the brunt of the storm. The blizzard occurred during the most extreme cold the area had ever seen, accompanied by some of the largest winter snowfalls on record. The blizzard struck with little warning on Friday morning, January 28, 1977, and the blowing snow and extreme cold paralyzed the Buffalo area until the first week of February. The storm made travel impossible and stranded thousands of people across the region, while snowdrifts buried houses up to the second story. This is a story not only of survival, but also of community. Neighbors helped neighbors, radio stations relayed messages and provided crucial information, and countless individuals donated their time and equipment to bring needed medicine or food to shut-ins across the region. Blizzard of 77 Stephen L. Wood, 2012-10 When I started researching the Blizzard of 77 I was not aware of its magnitude or the area it encompassed nor did I realize the impact it had on the thousands of people it affected, many three and four generation farmers and ranchers along with complete towns that could never quite recover from the total devastation. Not one time when I would ask for archival records from newspapers or libraries did I not find anyone that had not remembered the blizzard some were only seven but have vivid memories and a story. Stories came from coffee shops in the smaller towns and spread by word of mouth of my desire to hear their story. I chose only forty six stories to print from the over two hundred interviews but used references from most all. Twenty four human lives lost; three of which were school children let off their bus at a home never to go back to school again. A family froze to death except for one small child found wrapped in his mothers blouse with her frozen body covering him, and several other actual stories as told by the rescue personnel involved in their discovery. The Livestock losses were so extensive that to this day there has never been an actual loss record. What is known is that it had to be in the tens of thousands. One rancher never accounted for over ten thousand head lost. A lake where so many walked out on the ice and fell through that it was impossible to even estimate and the person that witnessed it. Thousands of sheep, hogs, chickens and even some domestic quail became victims of this three day plains blizzard with recorded winds of ninety eight miles per hour. An estimated seven thousand power poles and thousands of miles of their lines tangled or dangling from their broken polls leaving many without commercial power for six to seven weeks. Phone systems in the entire five state area none existent leaving communication only by Police, State Patrol, Sheriffs department and CB radio to handle the thousands of emergencies and distress calls. You will read personal accounts many never told to the public some so traumatic it will be hard to believe. Reported human and livestock deaths and what the papers wouldn't or couldn't report. Don't expect any sugar coating of the accounts printed they are what they were. Don't expect another storm story: You will learn about survival skills needed in many emergencies and how to prepare for electrical outages that seem to occur on a regular basis in this country. You will learn what not to look at that was lost during a storm but look at what you have that will make getting through the disaster possible and in many cases tolerable. Many deaths and sicknesses are caused by not being prepared for a disaster that seem to occur on a regular basis. Throughout this story you will learn of some very inexpensive items to have on hand if a disaster occurs. This is also a story that had a great impact on the beginning of the farm crises of the 1980s and how it contributed to the farming, ranching, food shortages and prices of today. This alone took a lot of research to get some facts that will undoubtedly make one give serious thought to our very essence of life eating. One review said it best This is a book that needed to be written; It amplifies the complacency many of us has as to electric power, communications, heat, water, sewage disposal, food and just our dependency on the modern way of life that could, and as demonstrated recently by mothers natures fury, can end in very little time.

Winter Storm Damage Along the California Coast, 1977-1978 George W. Domurat, 1978 California experienced significant coastal damage during the winter of January and February 1978. A combination of high astronomical tides, strong onshore winds, high storm waves, and excessive rainfall produced an aggravated erosional condition. This report documents the causes and results of the dynamic conditions which led to the storm damage along the California coastline. Also included, as an appendix, is a section of a report by the California Coastal Commission summarizing the cost analysis of damage along coastal California. (Author).

Power, Choice and Vulnerability Peter Winchester,2014-04-23 Natural disasters make dramatic reading. Every year, some area of the world is devastated by a disaster, with enormous consequent loss of life and disruption to livelihoods. What can be done to alleviate this? Why are such disasters so lethal? Why do people expose themselves to such hazards? Do mitigation programmes help? What effect does aid really have on the areas that receive it? By examining one particular cyclone-prone area of Southern India in great detail over a 10-year period Peter Winchester has come up with some perceptive answers to the questions. In particular, he formulates a set of five 'golden rules' for disaster management. The book will provide valuable and thought-provoking reading for anyone involved with disaster management, and will be essential for all those whose work involves aid or development in disaster-prone areas.

Storm and Cloud Dynamics William R. Cotton,George Bryan,Susan C. van den Heever,2010-12-21 *Storm and Cloud Dynamics* focuses on the dynamics of clouds and of precipitating mesoscale meteorological systems. Clouds and precipitating mesoscale systems represent some of the most important and scientifically exciting weather systems in the world. These are the systems that produce torrential rains, severe winds including downburst and tornadoes, hail, thunder and lightning, and major snow storms. Forecasting such storms represents a major challenge since they are too small to be adequately resolved by conventional observing networks and numerical prediction models. Provides a complete treatment of clouds integrating the analysis of air motions with cloud structure, microphysics, and precipitation mechanics Describes and explains the basic types of clouds and cloud systems that occur in the atmosphere-fog, stratus, stratocumulus, altocumulus, altostratus, cirrus, thunderstorms, tornadoes, waterspouts, orographically induced clouds, mesoscale convection complexes, hurricanes, fronts, and extratropical cyclones Summarizes the fundamentals, both observational and theoretical, of atmospheric dynamics, thermodynamics, cloud microphysics, and radar meteorology, allowing each type of cloud to be examined in depth Integrates the latest field observations, numerical model simulations, and theory Supplies a theoretical treatment suitable for the advanced undergraduate or graduate level, as well as post-graduate
