Let Over Lambda Doug Hoyte,2008 Let Over Lambda is one of the most hardcore computer programming books out there. Starting with the fundamentals, it describes the most advanced features of the most advanced language: Common Lisp. Only the top percentile of programmers use lisp and if you can understand this book you are in the top percentile of lisp programmers. If you are looking for a dry coding manual that re-hashes

common-sense techniques in whatever langue du jour, this book is not for you. This book is about pushing the boundaries of what we know about programming. While this book teaches useful skills that can help solve your programming problems today and now, it has also been designed to be entertaining and inspiring. If you have ever wondered what lisp or even programming itself is really about, this is the book you have been looking for.

Thomas Mann's The Magic Mountain Rodney Symington, 2011-09-22 Thomas Mann's novel *The Magic Mountain* presents a panorama of European society in the first two decades of the 20th century and depicts the philosophical and metaphysical dilemmas facing people in the modern age. In the years leading up to the First World War, the fundamental elements of human nature were thrown into sharp relief by the political tensions that resulted in the ultimate metaphor for the innate destructiveness of humankind: the War itself. If such a war is the true expression of human tendencies, what hope is there for the future? Through the figure of the main character of the novel, Thomas Mann explores the alternative philosophies of life available to human beings in the modern age, and invites the reader to undertake a personal odyssey of discovery, with a view to adopting a positive approach in an era that seems to offer no clear-cut answers. This book is a comprehensive commentary on Thomas Mann's seminal novel, one of the key literary artefacts of the 20th century. The author has taken upon himself the task of explaining all the references and allusions contained in the novel, and of providing readers who know little or no German with enough explanatory comment to enable them to understand the novel and extract the maximum reading pleasure from it.

Interactive Knowledge Discovery and Data Mining in Biomedical Informatics Andreas Holzinger, Igor Jurisica, 2014-06-17 One of the grand challenges in our digital world are the large, complex and often weakly structured data sets, and massive amounts of unstructured information. This "big data" challenge is most evident in biomedical informatics: the trend towards precision medicine has resulted in an explosion in the amount of generated biomedical data sets. Despite the fact that human experts are very good at pattern recognition in dimensions of $= 3$; most of the data is high-dimensional, which makes manual analysis often impossible and neither the medical doctor nor the biomedical researcher can memorize all these facts. A synergistic combination of methodologies and approaches of two fields offer ideal conditions towards unraveling these problems: Human-Computer Interaction (HCI) and Knowledge Discovery/Data Mining (KDD), with the goal of supporting human capabilities with machine learning. This state-of-the-art survey is an output of the HCI-KDD expert network and features 19 carefully selected and reviewed papers related to seven hot and promising research areas: Area 1: Data Integration, Data Pre-processing and Data Mapping; Area 2: Data Mining Algorithms; Area 3: Graph-based Data Mining; Area 4: Entropy-Based Data Mining; Area 5: Topological Data Mining; Area 6 Data Visualization and Area 7: Privacy, Data Protection, Safety and Security.

The Speeches in Vergil's Aeneid Gilbert Highet, 2015-03-08 In the *Aeneid* men, women, gods, and goddesses are characterized by the speeches assigned to them far more than by descriptions of their appearance or behavior. Most of the speeches are highly emotional and individualized, reminding us of the most powerful utterances of Greek tragedy. Gilbert Highet has analyzed all the speeches in the *Aeneid*, using statistical techniques as well as more traditional methods of scholarship. He has classified the speeches; identified their models in earlier Greek and Latin literature; analyzed their structure; and discussed their importance in the portrayal of character. He finds that Vergil used standard rhetorical devices with discretion, and that his models were poets rather than orators. Nevertheless, this study shows Vergil to have been a master dramatist as well as a great epic poet. Originally published in 1972. The Princeton Legacy Library uses the latest print-on-demand technology to again make available previously out-of-print books from the distinguished backlist of Princeton University Press. Learning Analytics Gwo-Jen Hwang,Hui-Chun Chu,Chengjiu Yin,2018-12-18 Learning analytics is one of the most important research issues in the field of educational technology. By analyzing logs and records in educational databases and systems, it can provide useful information to teachers, learners, and decision makers – information which they can use to improve teaching strategies, learning performances, and educational policies. However, it is a great challenge for most researchers to efficiently analyze educational data in a meaningful way. This book presents various learning analytics approaches and applications, including the process of determining the coding scheme, analyzing the collected data, and interpreting the findings. This book was originally published as a special issue of Interactive Learning Environments.

Web Information Retrieval Stefano Ceri,Alessandro Bozzon,Marco Brambilla,Emanuele Della Valle,Piero Fraternali,Silvia Quarteroni,2013-08-30 With the proliferation of huge amounts of (heterogeneous) data on the Web, the importance of information retrieval (IR) has grown considerably over the last few years. Big players in the computer industry, such as Google, Microsoft and Yahoo!, are the primary contributors of technology for fast access

to Web-based information; and searching capabilities are now integrated into most information systems, ranging from business management software and customer relationship systems to social networks and mobile phone applications. Ceri and his co-authors aim at taking their readers from the foundations of modern information retrieval to the most advanced challenges of Web IR. To this end, their book is divided into three parts. The first part addresses the principles of IR and provides a systematic and compact description of basic information retrieval techniques (including binary, vector space and probabilistic models as well as natural language search processing) before focusing on its application to the Web. Part two addresses the foundational aspects of Web IR by discussing the general architecture of search engines (with a focus on the crawling and indexing processes), describing link analysis methods (specifically Page Rank and HITS), addressing recommendation and diversification, and finally presenting advertising in search (the main source of revenues for search engines). The third and final part describes advanced aspects of Web search, each chapter providing a self-contained, up-to-date survey on current Web research directions. Topics in this part include meta-search and multi-domain search, semantic search, search in the context of multimedia data, and crowd search. The book is ideally suited to courses on information retrieval, as it covers all Web-independent foundational aspects. Its presentation is self-contained and does not require prior background knowledge. It can also be used in the context of classic courses on data management, allowing the instructor to cover both structured and unstructured data in various formats. Its classroom use is facilitated by a set of slides, which can be downloaded from www.search-computing.org.

The Sponsored Life Leslie Savan,2010-06-17 How does a blatant lying in TV commercials—like Joe Isuzu's manic claims—create public trust in a product or a company? How does a company associated with a disaster, Exxon or Du Pont for example, restore its reputation? What is the real story behind the rendering of the now infamous Joe Camel? And what is the deeper meaning of living in an ad, ad, ad world? For a decade, journalist Leslie Savan has been exposing the techniques used by advertisers to push products and pump up corporate images. In the lively essays in this collection, Savan penetrates beneath the slick surfaces of specific ads and marketing campaigns to show how they reflect and shape consumer desires. Savan's interviews with ad agencies and corporate clients—along with her insightful analyses of influential TV spots—reveal how successful advertising works. Ads do more than command attention. They are signposts to the political, cultural, and social trends that infiltrate the individual consumer's psyche. Think of the products associated with corporate mascots—the drum-beating bunny, the cereal-pushing tiger, the doughboy—that have become pop culture icons. Think cool. Think of the clothing manufacturer that uses multiracial imagery. Think progressive. Buy their worldview, buy their product. When virtually every product can be associate with some positive self-image, we are subtly refashioned into the advertiser's concept of a good citizen. Like it or not, we lead the sponsored life.

Iraq's Nuclear Mirage Imad Khadduri,2003 This book is a testimony of an Iraqi nuclear scientist who worked for the Iraqi Atomic Energy Commission over a period of thirty years. The period covers the peaceful beginnings of the Iraqi nuclear program, its gradual and then sudden turn into a weapon program and its final demise and disintegration. Imad Khadduri elucidates about his educational background, commitment to the Iraqi nuclear program, involvement in its various directions and ultimate disengagement and escape from Iraq. During half a year before the occupation of Iraq, he embarked on a lonely battle to counter the misinformation campaign mounted by the United States and Britain and fueled by people with questionable credibility.
