Players All Robert E. Rinehart,1998-12-22 *Players All* is a stunning accomplishment, an agenda-setting work; it opens the space for a bold, and innovative, critical, performance-based discourse on mass sport, sport as entertainment, and spectatorship in the global, postmodern society. -- Norman K. Denzin, University of Illinois at Urbana-Champaign In a book that is both scholarly and engagingly personal, Robert E. Rinehart takes us into the world of contemporary sport performances, from the Olympic Games to The eXtreme Games, the Super Bowl to The American Gladiators. He introduces us to sports tourism and the highly commercialized world of global sport. Rinehart analyzes the emergence of such sports as paint ball (and its associations with the Vietnam War) and indoor rock climbing (and its links to environmentalism and self-mastery). He shows how sports have become theatrical events and paints a revealing portrait of the new postmodern culture of sports.

Urban Change and the European Left Donald McNeill,2005-08-02 *Urban Change and the European Left* looks at the way politicians and critics use the city to ground their political messages. The book explores local narratives of urban change through ethnography, biography, travelogue, and social history. Drawing on novels, architectural commentaries, urban plans, political speeches, history and autobiography, *Urban Change and the European Left* provides accounts of public art, architecture, grassroots struggles, battles for control of the 1992 Olympics, and the city and Catalan identity.

Modern Aspects of Electrochemistry Brian E. Conway,John O'M. Bockris,Ralph E. White,2013-11-09 This volume of *Modern Aspects of Electrochemistry* contains six chapters. The first four chapters are about phenomena of interest at the microscopic level and the last two are on phenomena at the macroscopic level. In the first chapter, Uosaki and Kita review various theoretical models that have been presented to describe the phenomena that occur at an electrolyte/ semiconductor interface under illumination. In the second chapter, Orazem and Newman discuss the same phenomena from a different point of view. In Chapter 3, Bogus lavsky presents state-of-the-art considerations of transmembrane potentials and other aspects of active transport in biological systems. Next, Burke and Lyons present a survey of both the theoretical and the experimental work that has been done on hydrous oxide films on several metals. The last two chapters cover the topics of the production of chlorine and caustic and the phenomena of electrolytic gas evolution. In Chapter 5, Hine et al. describe the engineering aspects of the three processes used in the chlor-alkali industry, and in Chapter 6, Sides reviews the macroscopic phenomena of nucleation, growth, and detachment of bubbles, and the effect of bubbles on the conductivity of and mass transfer in electrolytes.

Protected Areas Lucas N. Joppa,Jonathan E. M. Bailie,John G. Robinson,2016-02-22 Protected areas spearhead our response to the rapidly accelerating biodiversity crisis. However, while the number of protected areas has been growing rapidly over the past 20 years, the extent to which the world's protected areas are effectively conserving species, ecosystems, and ecosystem services is poorly understood. Highlights new techniques for better management and monitoring of protected areas Sets guidelines for the decision making processes involved in setting up and maintaining protected areas Fully international in scope and covering all ecosystems and biomes

Effective Conservation Science Peter M. Kareiva,Michelle Marvier,Brian Silliman,2018 This edited volume assembles some of the most intriguing voices in modern conservation biology. Collectively they highlight many of the most challenging questions being asked in conservation science today, each of which will benefit from new experiments, new data, and new analyses. The book's principal aim is to inspire readers to tackle these uncomfortable issues head-on. A second goal is to be reflective and consider how the field has reacted to challenges, and to what extent these challenges advance conservation science. A concluding chapter will synthesize common themes that emerge from the experiences of the authors in these debates and discuss how best to guard against confirmation bias. The hope is that this book will lead to greater conservation of ecosystems and biodiversity by harnessing the engine of constructive scientific scepticism in service of better results.--

Conservation Biogeography Richard J. Ladle,Robert J. Whittaker,2011-01-11 CONSERVATION BIOGEOGRAPHY The Earth's ecosystems are in the midst of an unprecedented period of change as a result of human action. Many habitats have been completely destroyed or divided into tiny fragments, others have been transformed through the introduction of new species, or the extinction of native plants and animals, while anthropogenic climate change now threatens to completely redraw the geographic map of life on this planet. The urgent need to understand and prescribe solutions to this complicated and interlinked set of pressing conservation issues has lead to the transformation of the venerable academic discipline of biogeography - the study of the geographic distribution of animals and plants. The newly emerged sub-discipline of conservation biogeography uses the conceptual tools and methods of biogeography to address real world conservation problems and to provide predictions about the fate of key species and ecosystems over the next century. This book provides the first comprehensive review of the field in a series of closely interlinked chapters addressing the central issues within this exciting and important subject.
