

Age Of Extinction

Ryan Tucker Jones

Transformers Emily Lawrence,2017-11-09 Author Emily Lawrence has managed to bring this larger than life movie from the big screen to an even larger literary stage. In this novelization, an incredible city is demolished to ruins in a post galactic war; however the Earth itself is spared. As humankind pick up the pieces, a shadowy group rises in opportunistic fashion to take control of history. Coincidentally, an antiquated and effective new threat also sets its sights on Earth. Texas native Cade Yeager enables a beaten Optimus Prime and the Autobots to ascend to their former glory and address their most formidable difficulty yet. The end result is the ultimate combat between a Prime led team and a host of enemies. The stakes are high and the possibility of a modern day age of extinction is all too real.

Beloved Beasts: Fighting for Life in an Age of Extinction Michelle Nijhuis,2021-03-09 Winner of the Sierra Club's 2021 Rachel Carson Award One of Chicago Tribune's Ten Best Books of 2021 Named a Top Ten Best Science Book of 2021 by Booklist and Smithsonian Magazine At once thoughtful and thought-provoking,” Beloved Beasts tells the story of the modern conservation movement through the lives and ideas of the people who built it, making “a crucial addition to the literature of our troubled time (Elizabeth Kolbert, author of *The Sixth Extinction*). In the late nineteenth century, humans came at

long last to a devastating realization: their rapidly industrializing and globalizing societies were driving scores of animal species to extinction. In *Beloved Beasts*, acclaimed science journalist Michelle Nijhuis traces the history of the movement to protect and conserve other forms of life. From early battles to save charismatic species such as the American bison and bald eagle to today's global effort to defend life on a larger scale, Nijhuis's "spirited and engaging" account documents "the changes of heart that changed history" (Dan Cryer, *Boston Globe*). With "urgency, passion, and wit" (Michael Berry, *Christian Science Monitor*), she describes the vital role of scientists and activists such as Aldo Leopold and Rachel Carson, reveals the origins of vital organizations like the Audubon Society and the World Wildlife Fund, explores current efforts to protect species such as the whooping crane and the black rhinoceros, and confronts the darker side of modern conservation, long shadowed by racism and colonialism. As the destruction of other species continues and the effects of climate change wreak havoc on our world, *Beloved Beasts* charts the ways conservation is becoming a movement for the protection of all species including our own.

Of Tigers and Men Richard Ives, 2012-12-05 We have entered the age of extinction. Soon many of the animal kingdom's most extraordinary creatures will no longer roam free, hunted and hounded out of existence—including one of its most magnificent denizens, the wild tiger. It was this sobering realization of impending tragedy that inspired naturalist and safari leader Richard Ives to embark on a stirring adventure and spiritual journey across India, Nepal, and Southeast Asia—meeting enigmatic wanderers and crusading "tiger men" as he made his way through some of the planet's most breathtaking but diminishing wild places. For there he hoped to achieve a dangerous, great and perhaps foolhardy goal before dire circumstances and human greed rendered it unattainable: to enter the last natural domain of the tiger, unarmed and on foot...and to confront the majestic beast face-to-face, eye-to-eye. *Of Tigers and Men* is an exceptional real-life adventure story—one of those rare and remarkable books that can honestly change the way we see our world.

Inheritors of the Earth Chris D. Thomas, 2017-09-05 Human activity has irreversibly changed the natural environment. But the news isn't all bad. It's accepted wisdom today that human beings have permanently damaged the natural world, causing extinction, deforestation, pollution, and of course climate change. But in *Inheritors of the Earth*, biologist Chris Thomas shows that this obscures a more hopeful truth -- we're also helping nature grow and change. Human cities and mass agriculture have created new places for enterprising animals and plants to live, and our activities have stimulated

evolutionary change in virtually every population of living species. Most remarkably, Thomas shows, humans may well have raised the rate at which new species are formed to the highest level in the history of our planet. Drawing on the success stories of diverse species, from the ochre-colored comma butterfly to the New Zealand pukeko, Thomas overturns the accepted story of declining biodiversity on Earth. In so doing, he questions why we resist new forms of life, and why we see ourselves as unnatural. Ultimately, he suggests that if life on Earth can recover from the asteroid that killed off the dinosaurs, it can survive the onslaughts of the technological age. This eye-opening book is a profound reexamination of the relationship between humanity and the natural world.

Nature's Ghosts Mark V. Barrow, Jr., 2011-04-15 The rapid growth of the American environmental movement in recent decades obscures the fact that long before the first Earth Day and the passage of the Endangered Species Act, naturalists and concerned citizens recognized—and worried about—the problem of human-caused extinction. As Mark V. Barrow reveals in *Nature's Ghosts*, the threat of species loss has haunted Americans since the early days of the republic. From Thomas Jefferson's day—when the fossil remains of such fantastic lost animals as the mastodon and the woolly mammoth were first reconstructed—through the pioneering conservation efforts of early naturalists like John James Audubon and John Muir, Barrow shows how Americans came to understand that it was not only possible for entire species to die out, but that humans themselves could be responsible for their extinction. With the destruction of the passenger pigeon and the precipitous decline of the bison, professional scientists and wildlife enthusiasts alike began to understand that even very common species were not safe from the juggernaut of modern, industrial society. That realization spawned public education and legislative campaigns that laid the foundation for the modern environmental movement and the preservation of such iconic creatures as the bald eagle, the California condor, and the whooping crane. A sweeping, beautifully illustrated historical narrative that unites the fascinating stories of endangered animals and the dedicated individuals who have studied and struggled to protect them, *Nature's Ghosts* offers an unprecedented view of what we've lost—and a stark reminder of the hard work of preservation still ahead.

The Sixth Extinction Terry Glavin, 2014-06-10 *The Sixth Extinction* is a haunting account of the age in which we live. Ecologists are calling it the Sixth Great Extinction, and the world isn't losing just its ecological legacy; also vanishing is a vast human legacy of languages and our ways of living,

seeing, and knowing. Terry Glavin confirms that we are in the midst of a nearly unprecedented, catastrophic vanishing of animals, plants, and human cultures. He argues that the language of environmentalism is inadequate in describing the unraveling of the vast system in which all these extinctions are actually related. And he writes that we're no longer gaining knowledge with every generation. We're losing it. In the face of what he describes as a dark and gathering sameness upon the Earth, Glavin embarks on a global journey to meet the very things we're losing (a distinct species every ten minutes, a unique vegetable variety every six hours, an entire language every two weeks) and on the way encounters some of the world's wonderful, rare things: a human-sized salmon in Russia; a mysterious Sino-Tibetan song-language; a Malayan tiger, the last of its kind; and a strange tomato that tastes just like black cherry ice cream. And he finds hope in the most unlikely places—a macaw roost in Costa Rica; a small village in Ireland; a relic community of Norse whalers in the North Atlantic; the vault beneath the Royal Botanical Garden at Kew; and the throne room of the Angh of Longwa in the eastern Himalayas. A fresh narrative take on the usual doom and gloom environmentalism, *The Sixth Extinction* draws upon zoology, biology, ecology, anthropology, and mythology to share the joys hidden within the long human struggle to conserve the world's living things. Here, we find hope in what's left: the absolute and stunning beauty in the Earth's last cultures and creatures.

Citizen Scientist Mary Ellen Hannibal, 2017-08-22 A San Francisco Chronicle Best Book of 2016: “Intelligent and impassioned, *Citizen Scientist* is essential reading for anyone interested in the natural world.” Award-winning writer Mary Ellen Hannibal has long reported on scientists’ efforts to protect vanishing species, but it was only through citizen science that she found she could take action herself. As she wades into tide pools, spots hawks, and scours mountains, she discovers the power of the heroic volunteers who are helping scientists measure—and even slow—today’s unprecedented mass extinction. Citizen science may be the future of large-scale field research—and our planet’s last, best hope.

The Song Of The Dodo David Quammen, 2012-03-31 Why have island ecosystems always suffered such high rates of extinction? In our age, with all the world's landscapes, from Tasmania to the Amazon to Yellowstone, now being carved into island-like fragments by human activity, the implications of this question are more urgent than ever. Over the past eight years, David Quammen has followed the threads of island biogeography on a globe-encircling journey of discovery.

Radical Regeneration: Carolyn Baker, Andrew Harvey, 2020-11-03 This is a demanding book—but our times are demanding. It is an honest book—and

our times demand truth. —Matthew Fox, American priest, theologian, and author The genius of this book is the knowledge that this catastrophe is a necessary precursor to a radical transformation that we are co-creating with the divine. Radical Regeneration is an indispensable guide for what lies ahead. —Betty J. Kovács, Ph.D., author of Merchants of Light: The Consciousness That Is Changing the World This book, Radical Regeneration, is a radiant offering of the possibility of the evolution of human consciousness in the midst of extinction. It's exactly the fierce and sacred medicine we need right now. —V (formerly known as Eve Ensler), author of The Vagina Monologues and The Apology Andrew Harvey and Carolyn Baker invite us to rise to these times as a grand initiation, to be renewed in splendor, or to stand idly and be swallowed by Kali, the goddess of time and death. —Alberto Villoldo PhD, Bestselling author of One Spirit Medicine and Shaman Healer Sage If ever we needed a guidebook that truly addressed the crises of our times while inspiring us with guidance and wisdom, this is that book. —Caroline Myss, author of Anatomy of the Spirit and Intimate Conversations with the Divine What is being made crystal clear is that humanity stands at a monumentally fragile threshold with two stark choices placed before it in a situation of complete uncertainty: Those choices are: 1) To continue to worship a vision of power, totally distanced from sacred reality 2) Or to choose the path of submitting bravely to the alchemy of being transfigured by a global dark night event that shatters all illusions but reveals the greatest imaginable possibility being born out of the greatest imaginable disaster. If humanity chooses the second path, which is what is being celebrated in this book, then it will have trained itself in the new radical unity necessary to weather the even worse crises that most certainly will quickly follow.

Its advanced engineering dwarfs known human technology, and unlocking its secrets will catapult American science eons into the future. When a mishap maroons Ghost 1 in the far reaches of unknown space, the ship's distress beacon reaches the very alien race Ghost 1's crew has been seeking: the Autobots. The gigantic mechanized beings are also on a quest: to find the Allspark, a device crucial to the salvation of their home world, Cybertron. But they're not alone. The Decepticons, the Autobots' brutal enemies, have their own sinister purposes in seeking the Allspark. As these adversaries are drawn together once more, the stage is set for a death-dealing new battle in which each is driven by a single-minded aim: total annihilation of the enemy.

When Dinosaurs Fall Orlando Rodriguez, I was born into the religion of Jehovah's Witnesses and was raised by my forebears with the single-minded goal to be baptized in the name of the Lord, Jehovah. Lucky me. There was a problem with this monomaniacal plan. I was an atheist as far back as I could remember. Before I continue, I'd like to make the following requisite statement, which I think is very important to articulate. I promised myself that I did not want to make another Jehovah's Witness bashing book. There are plenty of those available. I try to convey the intentional internal conflict that is nourished in the congregation and the ideologies used as brainwashing you to accept the "truth." It is important to note that the Jehovah's Witnesses are a cult, just like every other religion but there is some real danger to this unusual sect of Christianity. You will be called to sacrifice your child's life to God if they require a blood transfusion to save their life. You will be forced into not pursuing higher education, the sole purpose of your existence to preach the "Good News". Women are to be submissive to male counterparts at all times. I can truly say that this is not the religion you should be

looking at if you want answers to life's yearning questions.

Empire of Extinction Ryan Tucker Jones, 2017-03 Empire of Extinction examines the causes and consequences of environmental catastrophe resulting from Russia's imperial expansion into the North Pacific. Gathering a host of Siberian and Alaskan native peoples, from the early 1700s until 1867, the Russian empire organized a rapacious hunt for fur seals, sea otters, and other fur-bearing animals. The animals declined precipitously and Steller's sea cow went entirely extinct. This destruction, which took place in one of the most hotly-contested imperial arenas of the time, also drew the attention of natural historians, who played an important role in imperial expansion. Their observations of environmental change in the North Pacific caused Russians and other Europeans to recognize the threat of species extinction for the first time. Russians reacted by instituting some of the colonial world's most progressive conservationist policies. Empire of Extinction points to the importance of the North Pacific both for the Russian empire and for global environmental history--

Even Mountains Vanish SueEllen Campbell, 2003 The Earth is old. Nothing lasts. All life is kin. Different eyes perceive different worlds, and much remains hidden. Ours is an age of extinctions; ours are the hands of the destroyers. Grief and beauty are knotted together. Curiosity and imagination are fundamental human forces. So are fear and hatred, passion and compassion. None of this is surprising.... But scale matters. At this high level of generality, everything seems obvious. When I focus on smaller things, the picture changes. from the book Sitting on a mesa above the Rio Grande, her back pressed against the remnants of eons-old volcanic eruptions and her thoughts drawn to the unavoidable significance of the laboratories at Los Alamos a few miles away, an idea plants itself in SueEllen Campbell's mind. Brought to fruition, the idea becomes a journey to find the seam where past and present, geology and history, Yellow-bellied Marmots and White-tailed Ptarmigans meet and join to create the world in which we find ourselves. With elegant, urgent prose, Campbell attempts to make sense of a planet shaped 13.4 billion years ago by awesome natural cataclysm and now threatened with destruction by environmental cataclysms of human origins. Spurred by curiosity, despair, and an analytical mind, she wanders from Colorado to New Mexico to Canada's arctic coast investigating not only facts and data, but also the mystery that lies below the surface.

Unnatural Companions Peter Christie, 2020-05-21 Highly compelling...page-turning read – TNC's Cool Green Science We love our pets. Dogs, cats, birds, reptiles, and other species have become an essential part of more families than ever before—in North America today, pets outnumber people. Pet

owners are drawn to their animal companions through an innate desire to connect with other species. But there is a dark side to our domestic connection with animal life: the pet industry is contributing to a global conservation crisis for wildlife—often without the knowledge of pet owners. In *Unnatural Companions*, journalist Peter Christie issues a call to action for pet owners. If we hope to reverse the alarming trend of wildlife decline, pet owners must acknowledge the pets-versus-conservation dilemma and concede that our well-fed and sheltered cats too often prey on small backyard wildlife and seemingly harmless reptiles released into the wild might be the next destructive invasive species. We want our pets to eat nutritionally healthy food, but how does the designer food we feed them impact the environment? Christie's book is a cautionary tale to responsible pet owners about why we must change the ways we love and care for our pets. It concludes with the positive message that the small changes we make at home can foster better practices within the pet industry that will ultimately benefit our pets' wild brethren.
