Paul E. Eden

Commercial Aviation Gerald Lee Dillingham, 2007 Airbus S.A.S., a European aircraft manufacturer, is introducing a new aircraft designated as the A380, which is expected to enter service in late 2007. The A380 will be the largest passenger aircraft in the world, with a wingspan of 262', a tail fin reaching 80' high, & a maximum takeoff weight of 1.2 million pounds. The A380 has a double deck & could seat up to 853 passengers. This report discusses: (1) the safety issues associated with introducing the A380 at U.S. airports; (2) the potential impact of A380 operations on the capacity of U.S. airports; & (3) how selected foreign airports are preparing to accommodate the A380. The author conducted site visits to the 18 U.S. airports & 11 Asian, Canadian, & European airports preparing to receive the A380. Ill.

Airbus A380 Guy Norris, Mark Wagner, 2005 A revealing, behind-the-scenes look at the development of the biggest commercial aircraft ever built. With 200 colour photos, this book takes readers through the drama of the A380 project, introducing all the key players and unravelling the controversies surrounding its development.

Airbus A380 Robert Jackson, Glen Ashley, 2021-07-30 "A great addition to the highly popular Flight Craft Series. This book reviews the history of . . . an iconic and important aircraft in civil aviation." –Firetrench On April 27 2005, an aircraft under the power of six massive Rolls-Royce Trent 900 turbofan engines was making its first flight, and it was making history. For

this was the Airbus A380, the largest passenger aircraft in the world. With air traffic continuing to double every fifteen years, the A380 was designed by Airbus Industrie to meet the needs of the passengers and airports, while also delivering the level of efficiency necessary to protect the environment for future generations. The design incorporated two full-length decks with wide-body dimensions, meaning its two passenger levels offered an entire deck's worth of additional space compared to the next largest twin-engine jetliner. With more seats than any other aircraft, the A380 offered solutions to overcrowding; needing fewer journeys to carry 60 percent more passengers, making it the perfect solution to airport congestion, fleet planning optimization and traffic growth. Typical seating capacity was 525, although the aircraft was certified to carry up to 853 passengers. Production of the A380 peaked at thirty aircraft per year in 2012 and 2014. Then, in February 2019, the biggest customer, Emirates, announced that it was to reduce its latest order by thirty-nine aircraft in favour of two other Airbus Models, the A350 and A330neo, a version using the same engines as the Boeing 787 Dreamliner. For Airbus, it was the last act. The Company announced that production of the A380 would cease by 2021. "Full of great information."

—Airport Spotting

Flying the Airbus A380 Gib Vogel, 2012-05-01 Since its first flight on 27 April 2005, the Airbus A380 has been the largest passenger airliner in the world. Instantly recognizable with its full-length upper deck, it represents

the pinnacle of modern airliner design. Flying the A380 gives a pilot's eye view of what it is like to fly this mighty machine. It takes the reader on a trip from London to Dubai as the flight crew see it, from pre-flight planning, through all the phases of the flight to shut-down at the parking stand many thousands of miles from the departure point.

Airbus A380. Problems and Recommendations ,2013-05-03 Seminar paper from the year 2011 in the subject Business economics - Business Management, Corporate Governance, grade: 1,2, Anglia Ruskin University, course: Systems and Operations Management, language: English, abstract: The production of the A380 aircraft ran two years behind schedule, causing financial losses, bad reputation and disappointment. To make decisions for future improvements and strategies, the situation has been analysed for management purposes. This report addresses the current situation and the causes of the problems by covering systems, operations and other important factors. It gives recommendations for improvement for these areas as well as for people, technological and organisational issues. It is shown that even a multinational company such as Airbus suffers from stultifying problems, using different systems at their plants or internal rivalries amongst top managers. Complex operations and dispersed plants further hampered the project. Finally it is recommended for Airbus, to integrate operations and systems in a better way, to introduce new systems to all plants and to ease organisational

structures.

The Troubled History of the Airbus A380 Wladimir Agapejew, 2014-01 Essay aus dem Jahr 2011 im Fachbereich VWL - Verkehrsökonomie, Note: 2,0, Anglia Ruskin University, Sprache: Deutsch, Anmerkungen: Dies ist eine Hausarbeit von meinem Auslandssemester in England an der Anglia Ruskin University in Cambridge. Das Fach hiess Systems and Operations Management (dt. Material und Fertigungswirtschaft)., Abstract: The 555-seat, double deck Airbus A380 is arguably the most ambitious civil aircraft program of all times. It is the largest passenger jet ever built. Its designers claim it will increase efficiency, use less fuel and generate less noise. Airlines can transport more passengers and cargo with the A380 than by any other commercial airliner, particularly on over sea flights and other extremely long flights (Airbus, 2011). Many airlines around the world, such as Air France, Emirates or Lufthansa have placed or will be placing orders for the A380. This report is all about the troubled history of the Airbus A380. In four stages it will describe how Airbus can improve its business efficiency. The first chapter is about systems and operations management and how it is integrated at Airbus. The second chapter describes how information systems and operations management can be updated to improve their business efficiency. The role of soft systems methodology is evaluated in the third chapter analysing and defining the business requirements at Airbus. The last chapter is about the people, technology and organisational issues involved in improving the

operations at Airbus
