The Planes of Wichita Daryl Murphy,2008-05 For more than eight decades, Wichita, Kansas has been recognized as the world's Air Capital, and there doesn't seem to be any other city that can make that claim. More than half of all the airplanes in the world were built in this prairie town of 360,000. Three elements drew early builders-weather, workers and wampum. Three hundred days of good flying weather can be guaranteed; a work force with experience learned on the farm on in the oil patch was on hand; and plenty of cash was available. Of the literally scores of airplane companies that called Wichita home over the years, today's survivors dominate the worldwide General Aviation market. The Planes of Wichita is a collection of thumbnail sketches that tell the stories that contributed to the legend.

*Consolidated Aircraft Corporation* Katrina Pescador,Mark Aldrich,2008 Founded by Reuben H. Fleet in 1923, Consolidated Aircraft Corporation (later Convair) became one of the most significant aircraft manufacturers in American history. For roughly 60 years, this prolific company was synonymous with San Diego. In fact, whole sections of the city were designed to provide homes for the Convair workers and their families. These men and women were responsible for building some of the most significant aircraft in aviation history, including the PBY Catalina, B-24 Liberator, F-102 Delta Dagger, as well as the reliable Atlas missile, which was vital in launching America into space. To this day, more than a decade after the company passed from the San Diego scene, tens of thousands of San Diegans still celebrate a seminal connection with Reuben Fleet, his company, and his popular slogan, Nothing short of right is right.

*Stealth* Peter Westwick, 2019-12-30 On a moonless night in January 1991, a dozen U.S. aircraft appeared in the skies over Baghdad. To the Iraqi air defenses, the planes seemed to come from nowhere. Their angular shape, making them look like flying origami, rendered them virtually undetectable. Each aircraft was more than 60 feet in length and with a wingspan of 40 feet, yet its radar footprint was the size of a ball bearing. Here was the first extensive combat application of Stealth technology. And it was devastating. Peter Westwick's new book illuminates the story behind these aircraft, the F-117A, also known as the Stealth Fighter, and their close cousin the B-2, also known as the Stealth Bomber. The development of Stealth unfolded over decades. Radar has been in use since the 1930s and was essential to the Allies in World War Two, when American investment in radar exceeded that in the Manhattan Project. The atom bomb ended the war, conventional wisdom has it, but radar won it. That experience also raised a question: could a plane be developed that was invisible to radar? That question, and the seemingly impossible feat of physics and engineering behind it, took on increasing urgency during the Cold War, when the United States searched for a way both to defend its airspace and send a plane through Soviet skies undetected. Thus started the race for Stealth. At heart, Stealth is a tale of not just two aircraft but the two aerospace companies

that made them, Lockheed and Northrop, guided by contrasting philosophies and outsized personalities. Beginning in the 1970s, the two firms entered into a fierce competition, one with high financial stakes and conducted at the highest levels of secrecy in the Cold War. They approached the problem of Stealth from different perspectives, one that pitted aeronautical designers against electrical engineers, those who relied on intuition against those who pursued computer algorithms. The two different approaches manifested in two very different solutions to Stealth, clearly evident in the aircraft themselves: the F-117 composed of flat facets, the B-2 of curves. For all their differences, Lockheed and Northrop were located twenty miles apart in the aerospace suburbs of Los Angeles, not far from Disneyland. This was no coincidence. The creative culture of postwar Southern California-unorthodox, ambitious, and future-oriented-played a key role in Stealth. Combining nail-biting narrative, incisive explanation of the science and technology involved, and indelible portraits of unforgettable characters, Stealth immerses readers in the story of an innovation with revolutionary implications for modern warfare.

Testing Aircraft, Exploring Space Roger E. Bilstein, 2003 Selected by Choice Magazine as an Outstanding Academic Title for 2003 The National Advisory Committee for Aeronautics—forerunner of today's NASA—emerged in 1915, when airplanes were curiosities made of wood and canvas and held together with yards of baling wire. At the time an unusual example of government intrusion (and foresight, given the importance of aviation to national military concerns), the committee oversaw the development of wind tunnels, metal fabrication, propeller design, and powerful new high-speed aircraft during the 1920s and '30s. In this richly illustrated account, acclaimed historian of aviation Roger E. Bilstein combines the story of NACA and NASA to provide a fresh look at the

agencies, the problems they faced, and the hard work as well as inventive genius of the men and women who found the solutions. NACA research during World War II led to critical advances in U.S. fighter and bomber design and, Bilstein explains, contributed to engineering standards for helicopters. After 1945 the agency's test pilots experimented with jet-powered aircraft, testing both human and technical limits in trying to break the so-called sound barrier. In October 1958, when the launch of the Soviet Sputnik signaled the beginning of the space race, NACA formed the nucleus of the new National Aeronautics and Space Agency. The new agency's efforts to meet President Kennedy's challenge—safely landing a man on the Moon and returning him to Earth before the end of the 1960s—is one of the great adventure stories of all time. Bilstein goes on to describe NASA's recent planetary and extraplanetary exploration, as well as its less well-known research into the future of aeronautical design.
