Albatross Tui De Roy, Julian Fitter, Mark Jones, 2008 Looks at what is known about the albatross, a bird of legend and poetry, and examines the conditions that are threatening over three-quarters of all albatross species with extinction.

Albatrosses Terence Lindsey, 2008-06-22 Most albatrosses range across the Southern Hemisphere from Antarctica to Australia and from South Africa to South America. The ferocious air encircling Antarctica is an impossible place for almost all non-aquatic animals, but not for the albatross. The most distinctive characteristic of albatrosses is that they ride storms. They do not evade storms, or flee them, but climb aboard and ride them - effectively throughout their lives. Aside from a few close relatives among the petrels and shearwaters, they are the only animals that do this. Albatrosses outlines the life histories of these spectacular birds, and explores some of the main strategies that have evolved to enable them to achieve mastery of one of the most hostile regions on the planet. Complemented by stunning photographs taken from remote locations, this book will be treasured by natural history and bird enthusiasts.

The Flag and the Albatross Arnold Marsh, 2016-05-11 The Flag and The Albatross is the story of the last eight months in the life of the USS Regulus (AF-57), a life ended by Typhoon Rose in Hong Kong. It begins with the ship getting a new, possibly unqualified captain, and two minor events which some superstitious in the crew think portend a dark future. In the following months, the Regulus provides exemplary services to the ships operating off the coast of Vietnam in support of the war. By pure chance it also just misses encounters with two typhoons; lucky, yes, but the captain becomes complacent. As the Regulus nears the end of its six-month deployment, it is scheduled for an R & R visit to Hong Kong. Unfortunately, Typhoon Rose also plans to make a visit there at the same time. The initial storm tracks show Rose missing the city, but as time passes, the track keeps changing and the threat increases. Finally, it is clear that Rose will hit Hong Kong, but the captain refuses all recommendations to evacuate and the ship remains at anchor. On the night of August 21, 1971 Typhoon Rose slams into Hong Kong - one of the strongest storms ever to hit the city. Her eye passes directly over the Regulus, and 160 mph winds and 40 foot seas wreck the ship on an uninhabited island. The Flag and The Albatross tells the story of the months leading up to the shipwreck, events during the storm's encounter with the city and the ship, and what happens thereafter. The author was the Executive Officer (second in command) during this period.

The Albatross Luis Sancho, 2007-03 Luis Sancho is a Spanish writer, who thinks the most beautiful books are those who kept you awake when you were a kid; but you still read when you grow up, because you discover new things in them. The Albatross is one of those books: a poetic journey of initiation and discovery. A troubled man who seeks freedom beyond the chains of civilization, finds an albatross who teaches him how to fly. Converted into a bird, he accompanies the old Albatross in his journey across the World, as he learns the codes of life and the pleasures of hunting, gliding and defying the storms.

Albatrosses, Petrels and Shearwaters of the World Derek Onley, Paul Scofield, 2020-01-23 Famous for their size and elegance in flight, albatrosses are familiar to anyone who has travelled through the southern oceans, and are a flagship family of conservation concern. However, albatrosses are just one of several groups of 'pelagic' birds - those that visit land only to breed, and spend the rest of their lives far from the coast, soaring from ocean to ocean in a never-ending search for food. Mysterious and

graceful, these birds can present a formidable identification challenge to even the most experienced birder. This book provides the answer - the first comprehensive guide to pelagic birds, the albatrosses, petrels, shearwaters, storm-petrels and diving petrels. A total of 46 spectacular colour plates highlight key ID criteria of the birds in flight, with close-ups of diagnostic regions of the plumage. The plates are accompanied by accurate distribution maps, while the sparkling text brings the world of these amazing birds to life. Several extremely rare species, such as Beck's Petrel, are illustrated for the first time, while the New Zealand Storm-petrel, rediscovered as recently as 2004, is also included. Sea-watchers all around the world will find this superb field guide indispensable.

The Albatross and the Fish Robin W. Doughty, Virginia Carmichael, 2012-01-20

Breeding on remote ocean islands and spending much of its life foraging for food across vast stretches of seemingly empty seas, the albatross remains a legend for most people. And yet, humans are threatening the albatross family to such an extent that it is currently the most threatened bird group in the world. In this extensively researched, highly readable book, Robin W. Doughty and Virginia Carmichael tell the story of a potentially catastrophic extinction that has been interrupted by an unlikely alliance of governments, conservation groups, and fishermen. Doughty and Carmichael authoritatively establish that the albatross's fate is linked to the fate of two of the highest-value table fish, Bluefin Tuna and Patagonian Toothfish, which are threatened by unregulated commercial harvesting. The authors tell us that commercial fishing techniques are annually killing tens of thousands of albatrosses. And the authors explain how the breeding biology of albatrosses makes them unable to replenish their numbers at the rate they are being depleted. Doughty and Carmichael set the albatross's fate in the larger context of threats facing the ocean commons, ranging from industrial overfishing to our habit of dumping chemicals, solid waste, and plastic trash into the open seas. They also highlight the efforts of dedicated individuals, environmental groups, fishery management bodies, and governments who are working for seabird and fish conservation and demonstrate that these efforts can lead to sustainable solutions for the iconic seabirds and the entire ocean ecosystem.

Oceanic Birds of the World Steve N. G. Howell, Kirk Zufelt, 2019-08-20 A state-of-the-art photographic field guide to the world's oceanic birds Oceanic birds are among the most remarkable but least known of all birds, living at sea, far from the sight of most people. They offer unusual identification challenges—many species look similar and it can be difficult to get good views of fast-flying birds from a moving boat. The first field guide to the world's oceanic birds in more than two decades, this exciting and authoritative book draws on decades of firsthand experience on the open seas. It features clear text filled with original insights and new information and more than 2,200 carefully chosen color images that bring the ocean and its remarkable winged inhabitants to life. Never before have oceanic birds been presented in such an accessible and comprehensive way. The introduction discusses the many recent developments in seabird taxonomy, which are incorporated into the species accounts, and these accounts are arranged into groups that aid field identification. Each group and species complex has an introductory overview of its identification challenges, illustrated with clear comparative photos. The text describes flight manner, plumage variation related to age and molt, seasonal occurrence patterns, migration routes, and many other features. The result is an indispensable guide for exploring birding's last great frontier. A comprehensive, authoritative, and accessible guide to oceanic birds Covers more than 270 species Includes more than 2,200 color photos with concise captions noting key features Features careful species comparisons,

overviews of the latest taxonomy, tips on how to observe and ID birds at sea, and much more

The Action Plan for Australian Birds 2010 Stephen Garnett, Judit Szabo, Guy

Dutson, 2011-09-14 The Action Plan for Australian Birds 2010 is the third in a series of action plans that have been produced at the start of each decade. The book analyses the International Union for Conservation of Nature (IUCN) status of all the species and subspecies of Australia's birds, including those of the offshore territories. For each bird the size and trend in their population and distribution has been analysed using the latest iteration of IUCN Red List Criteria to determine their risk of extinction. The book also provides an account of all those species and subspecies that are or are likely to be extinct. Each categorisation is justified on the basis of the latest research, including much unpublished material that has been made available during workshops conducted with leading ornithologists and conservation biologists around the country as well as phone interviews and correspondence. The result is the most authoritative account yet of the status of Australia's birds. In this completely revised edition each account covers not only the 2010 status but provides a retrospective assessment of the status in 1990 and 2000 based on current knowledge, taxonomic revisions and changes to the IUCN criteria, and then reasons why the status of some taxa has changed over the last two decades. Maps have been created specifically for the Action Plan based on vetted data drawn from the records of Birds Australia, its members and its partners in many government departments. The book contains some surprises - some alarming, some encouraging. The status of some birds has improved over the last two decades as a result of dedicated conservation management. Some may not have changed status but at least they are holding their own. Many, however, are continuing to decline and a distressing number are new to the list. There is also an increasing number of birds for which captive insurance populations need not only to be considered as a future option but actively pursued before it is too late. But this is not a book of lost causes. It is a call for action to keep the extraordinary biodiversity we have inherited and pass the legacy to our children. Every one of Australia's threatened taxa can be saved. This book describes the populations of species at greatest risk and outlines ways we can turn them around. 2012 Whitley Award Commendation for Zoological Resource.
