**Biostatistics: A Computing Approach** Stewart Anderson, 2011-12-20 The emergence of high-speed computing has facilitated the development of many exciting statistical and mathematical methods in the last 25 years, broadening the landscape of available tools in statistical investigations of complex data. *Biostatistics: A Computing Approach* focuses on visualization and computational approaches associated with both modern and classical techniques. Furthermore, it promotes computing as a tool for performing both analyses and simulations that can facilitate such understanding. As a practical matter, programs in R and SAS are presented throughout the text. In addition to these programs, appendices describing the basic use of SAS and R are provided. Teaching by example, this book emphasizes the importance of simulation and numerical exploration in a modern-day statistical investigation. A few statistical methods that can be implemented with simple calculations are also worked into the text to build insight about how the methods really work. Suitable for students who have an interest in the application of statistical methods but do not necessarily intend to become statisticians, this book has been developed from *Introduction to Biostatistics II*, which the author taught for more than a decade at the University of Pittsburgh.

*The Godmaker Trilogy: Book I: Alpha & Omega; Book II: Everywhere & Nowhere; Book III: I Am* Robin Buckallew, 2018-08-15 Now in one volume, the Godmaker Trilogy. Rudy Sullivan must follow the Godmakers if he wishes to protect his own life and the lives of those he loves. He has one ace-in-the-hole: the last play ever written by the old playwright, who might be a suicide or might have been murdered. He trails the two old men who claim they created all the gods as they take him from Italy to California to the North Pole, finally ending in the panhandle of Nebraska where an odd monument and a sleepy town somehow figure in the secret of the universe. The old man who claims to be Paul of Tarsus and travels in a creaky old plane with his friend, John the Baptist, has a knack for turning Rudy's life upside down, and in the process, conjuring up demons and danger. Rudy finds it hard to believe in Paul, but he finds it harder not to follow him. What he learns and sees on his journey will lead him to question not just his sanity, but his faith in God.

Algorithms for Functional Programming John David Stone,2018-10-27 This book presents a variety of widely used algorithms, expressing them in a pure functional programming language to make their structure and operation clearer to readers. In the opening chapter the author introduces the specific notations that constitute the variant of Scheme that he uses. The second chapter introduces many of the simpler and more general patterns available in functional programming. The chapters that follow introduce and explain data structures, sorting, combinatorial constructions, graphs, and sublist search. Throughout the book the author presents the algorithms in a purely functional version of the Scheme programming language, which he makes available on his website. The book is supported with exercises, and it is suitable for undergraduate and graduate courses on programming techniques.

**Hedge Fund Modelling and Analysis using MATLAB** Paul Darbyshire,David Hampton,2014-03-27 The second book in Darbyshire and Hampton's Hedge Fund Modelling and Analysis series, Hedge Fund Modelling and Analysis Using MATLAB® takes advantage of the huge library of built-in functions and suite of financial and analytic packages available to MATLAB®. This allows for a more detailed analysis of some of the more computationally intensive and advanced topics, such as hedge fund classification, performance measurement and mean-variance optimisation. Darbyshire and Hampton's first book in the series, Hedge Fund Modelling and Analysis Using Excel & and VBA, is seen as a valuable supplementary text to this book. Starting with an overview of the hedge fund industry the book then looks at a variety of commercially available hedge fund data sources. After covering key statistical techniques and methods, the book discusses mean-variance optimisation, hedge fund

classification and performance with an emphasis on risk-adjusted return metrics. Finally, common hedge fund market risk management techniques, such as traditional Value-at-Risk methods, modified extensions and expected shortfall are covered. The book's dedicated website, [www.darbyshirehampton.com](http://www.darbyshirehampton.com) provides free downloads of all the data and MATLAB® source code, as well as other useful resources. *Hedge Fund Modelling and Analysis Using MATLAB®* serves as a definitive introductory guide to hedge fund modelling and analysis and will provide investors, industry practitioners and students alike with a useful range of tools and techniques for analysing and estimating alpha and beta sources of return, performing manager ranking and market risk management.

*A Place for Everything* Judith Flanders, 2020-10-20 From a New York Times-bestselling historian comes the story of how the alphabet ordered our world. *A Place for Everything* is the first-ever history of alphabetization, from the Library of Alexandria to Wikipedia. The story of alphabetical order has been shaped by some of history's most compelling characters, such as industrious and enthusiastic early adopter Samuel Pepys and dedicated alphabet champion Denis Diderot. But though even George Washington was a proponent, many others stuck to older forms of classification -- Yale listed its students by their family's social status until 1886. And yet, while the order of the alphabet now rules -- libraries, phone books, reference books, even the order of entry for the teams at the Olympic Games -- it has remained curiously invisible. With abundant inquisitiveness and wry humor, historian Judith Flanders traces the triumph of alphabetical order and offers a compendium of Western knowledge, from A to Z. *A Times (UK) Best Book of 2020*
