Seven Superstorms of the Northeast James Lincoln Turner, 2005 From the Blizzard of 1888 to the Great Appalachian Storm of 1950, this storm book reveals the majesty and terror of the major storms to hit the mid-Atlantic region and New England. Truly a book for weather buffs--analysis of storms, filled with meteorological facts and details, this book is also for anyone who finds it impossible to turn away from breathtaking accounts of natural forces at their most powerful. Blizzards, hurricanes, northeasters and compelling stories are illustrated with historical weather maps and photographs, showing weather in all its worst fury and beauty.

What Stands in a Storm Kim Cross, 2016-03 Enter the eye of the storm in this gripping real-life thriller—A Perfect Storm on land—that chronicles America's biggest tornado outbreak since the beginning of recorded weather: a horrific three-day superstorm with 358 separate tornadoes touching down in twenty-one states and destroying entire towns. April 27, 2011 was the climax of a three-day superstorm that unleashed terror from Arkansas to New York. Entire communities were flattened, whole neighborhoods erased. Tornadoes left scars across the land so wide they could be seen from space. But from terrible destruction emerged everyday heroes—neighbors and strangers who rescued each other from hell on earth. "Armchair storm chasers will find much to savor in this grippingly detailed, real-time chronicle of nature gone awry" (Kirkus Reviews) set in Alabama, the heart of Dixie Alley where there are more tornado fatalities than anywhere else in the US. With powerful emotion and captivating detail, journalist Kim Cross expertly weaves together science and heartrending human stories. For some, it's a story of survival; for others it's the story of their last hours. Cross's immersive reporting and dramatic storytelling catapult you to the center of the very worst hit areas, where thousands of ordinary people witnessed the sky falling around them. Yet from the disaster rises a redemptive message that's just as real: in times of trouble, the things that tear our world apart reveal what holds us together.

Storm Chaser Warren Faidley, 1996 Vivid and personal account of confronting some of the planet's most violent weather.

Storm Kings Lee Sandlin, 2013 Traces the historical efforts to study and understand super cell tornadoes and the role of storm chasers in shaping meteorology, citing the great storm debates of the nineteenth century and the development of the National Weather Service.

The Perfect Storm Sebastian Junger, 1999-10 A true story of men against the sea.

Hurricane Hunters and Tornado Chasers Gary Jeffrey, Gianluca Garofoalo, 2008-01-15 Sketches featuring three storm chasers presented in graphic novel format accompany information about the history of storm chasing and requirements for the job of storm chaser.

A Furious Sky: The Five-Hundred-Year History of America's Hurricanes Eric Jay Dolin, 2020-08-04 Washington Post • 50 Notable Works of Nonfiction in 2020 Finalist • Kirkus Prize for Nonfiction Kirkus Reviews • Best Nonfiction Books of 2020 Library Journal • Best Science & Technology Books of 2020 Booklist • 10 Top Sci-Tech Books of 2020 New York Times Book Review • Editor's Choice With *A Furious Sky*, best-selling author Eric Jay Dolin tells the history of America itself through its five-hundred-year battle with the fury of hurricanes. In this "compelling" chronicle (New York Times Book Review), Eric Jay Dolin tells the history of America through its battles with hurricanes. Weaving together tales of tragedy and folly, of heroism and scientific progress, best-selling author Eric Jay Dolin shows how hurricanes have time and again determined the course of American history, from the nameless storms that threatened the New World voyages to our own era of global warming and megastorms. Along the way, Dolin introduces a rich cast of unlikely heroes, and forces us to reckon with the reality that future storms will likely be worse, unless we reimagine our relationship with the planet.

Severe Convective Storms and Tornadoes Howard B. Bluestein, 2013-06-03 This book is a focused, comprehensive reference on recent research on severe convective storms and tornadoes. It will contain many illustrations of severe storm phenomena from mobile Doppler radars, operational Doppler radars, photographs and numerical simulations.

Book of Storms Eric Sloane, 1956 Many drawings and diagrams to help the layman understand the mechanics of storms.

The Law of Storms Considered Practically William Henry Rosser, 1886

The Great Hurricane of 1780 Wayne Neely, 2012-09-17 The Great Hurricane of 1780, also known as Hurricane San Calixto II, is one of the most powerful and deadliest North Atlantic hurricanes on record. Often regarded as a cataclysmic hurricane, the storm's worst effects were experienced on October 10, 1780. In *The Great Hurricane of 1780*, author Wayne Neely chronicles the chaos and destruction it brought to the Caribbean. This storm was likely generated in the mid Atlantic, not far from the equator; it was first felt in Barbados, where just about every tree and house on the island was blown down. The storm passed through the Lesser Antilles and a small portion of the Greater Antilles in the Caribbean between October 10 and October 16 of 1780. Because the storm hit several of the most populous islands in the Caribbean, the death toll was very high. The official death toll was approximately 22,000 people but some historians have put the death toll as high as 27,500. Specifics on the hurricane's track and strength are unclear since the official North Atlantic hurricane database only goes back as far as 1851. Even so, it is a fact that this hurricane had a tremendous impact on economies in the Caribbean and parts of North America, and perhaps also played a major role in the outcome of the American Revolution. This thoroughly researched history considers the intense storm and its aftermath, offering an exploration of an important historical weather event that has been neglected in previous study.

Storm John Withington, 2016-09-15 Gales, cyclones, blizzards, tornados, and hurricanes—few things demonstrate the awesome power of nature like a good storm. Devastating, diverse, and sometimes appearing completely out of nowhere, storms are also a source of both scientific and aesthetic wonder. In this book, John Withington takes an in-depth and unique look at the nature of storms and the impact that they have—both physical and cultural—on our lives. Withington shows how storms have changed the course of human history. From Roman times to the modern day, he shows how their devastating effects have wiped out entire communities, changed the fates of battle, and even reset the entire planet. He also shows how beneficial they have been to us: as an important feature of our atmosphere and climate, but also as a source of inspiration for nearly every artist who has ever lived, from Homer to Rembrandt, in works from the Old Testament to Robinson Crusoe. Beautifully illustrated, this book offers a fascinating look at Earth's most fearsome events.

Wicked Weather Warren Faidley, 2018-07-15 For the past 30 years, Warren Faidley has forecast, intercepted, and photographed some of the planet's most extreme weather and natural disasters. As a photojournalist, natural disaster survival expert, and adventurer, his expeditions have covered countless miles. Along the way, he has witnessed both the dark side and breathtaking beauty of Mother Nature's mysterious ways. He has journeyed into the heart of darkness as hurricanes Andrew and Katrina brought rage and ruin to thousands. Tornadoes, firestorms, earthquakes, and lightning bolts are forever recorded by his cameras, but his memories are filled with the human elements of hope and survival. In this book, you'll discover over 150 photographs that chronicle Faidley's quest to find the perfect image in the midst of total chaos and will read about his adventures in the midst of the roar of an EF5 tornado, grapefruit-size hailstones, severe thunder and lightning storms, forest fires, and more.

Severe Convective Storms Charles Doswell, 2015-03-30 This highly illustrated book is a

collection of 13 review papers focusing on convective storms and the weather they produce. It discusses severe convective storms, mesoscale processes, tornadoes and tornadic storms, severe local storms, flash flood forecast and the electrification of severe storms.

Into the Storm Reed Timmer, 2010 A storm chaser featured on the popular Discovery Channel show *Storm Chasers* discusses the most exciting tornadoes, hurricanes and blizzards that he has been at the heart of, describing not just his adventures, but also the science behind the storms, in a book that also gives the reader a first-hand look at the storm-chasing community. TV tie-in.

Category 7 Bill Evans, Marianna Jameson, 2007-07-10 A Category 4 hurricane, with winds of up to 155 miles per hour, tears roofs off buildings, smashes windows and doors, and can send floodwaters up to the second floor. Evacuation is suggested for up to six miles inland. Hurricane Katrina was a Category 4 when she made landfall. Hurricane Simone is a Category 7—the biggest, strongest storm in recorded history. When she hits New York City, skyscrapers will fall. Subways and tunnels will flood. Lower Manhattan and much of Queens and Brooklyn will disappear under more than thirty feet of water. All along the Eastern Seaboard, towns and cities are being evacuated as wind-driven rain lashes the coast and storm surges crash through seawalls. Roads are packed with fleeing motorists whose cars are jammed with every personal possession that can be crammed in, plus family members, friends, and beloved pets. A huge natural disaster is brewing in the Atlantic. Except that Simone isn't natural. She's the product of rogue weather science being wielded by billionaire Carter Thompson as part of a personal vendetta against US President Winslow Benson. Once Carter wanted to bring rain to the desert and feed the starving peoples of the planet. Now he wants to show Benson—and the rest of the world—just how powerful wind and water can be. If technology created Simone, perhaps technology can stop her. It's up to Kate Sherman, once a member of Carter's weather team; and Jake Baxter, a weatherman for the CIA, to try, using a secret US Navy weapon. The catch? It has to be deployed inside the hurricane. At the Publisher's request, this title is being sold without Digital Rights Management Software (DRM) applied.

The Man Who Caught the Storm Brantley Hargrove, 2019-04-02 The saga of the greatest tornado chaser who ever lived: a tale of obsession and daring and an extraordinary account of humanity's high-stakes race to understand nature's fiercest phenomenon from Brantley Hargrove, "one of today's great science writers" (The Washington Post). At the turn of the twenty-first century, the tornado was one of the last true mysteries of the modern world. It was a monster that ravaged the American heartland a thousand times each year, yet science's every effort to divine its inner workings had ended in failure. Researchers all but gave up, until the arrival of an outsider. In a field of PhDs, Tim Samaras didn't attend a day of college in his life. He chased storms with brilliant tools of his own invention and pushed closer to the tornado than anyone else ever dared. When he achieved what meteorologists had deemed impossible, it was as if he had snatched the fire of the gods. Yet even as he transformed the field, Samaras kept on pushing. As his ambitions grew, so did the risks. And when he finally met his match—in a faceoff against the largest tornado ever recorded—it upended everything he thought he knew. Brantley Hargrove delivers a "cinematically thrilling and scientifically wonky" (Outside) tale, chronicling the life of Tim Samaras in all its triumph and tragedy. Hargrove takes readers inside the thrill of the chase, the captivating science of tornadoes, and the remarkable character of a man who walked the line between life and death in pursuit of knowledge. *The Man Who Caught the Storm* is an "adrenaline rush of a tornado chase...Readers from all across the spectrum will enjoy this" (Library Journal, starred review) unforgettable exploration of obsession and the extremes of the natural world.

Changes in the Nature of Fluctuation of Temperature and Liquid Water Content During

the Lifetime of a Large-scale Storm R. M. Dyer, 1982

Category 5 Ernest Zebrowski, Judith A. Howard, 2007-05-08 The epic story of the real victims of a perfect storm—overwhelmingly the poor—left behind in the aftermath of a deadly hurricane “A riveting new book.” —Tallahassee Democrat “Not simply an historical account of a storm thirty-seven years ago but a living, breathing entity brimming with the modern-day reality that, yes, it can happen again.” —American Meteorological Society Bulletin Fascinating, easy-to-read, yet informative.” —Richmond Times-Dispatch “Almost like sitting in front of the television watching the events unfold. A page-turner from the very first page.” —Ruston Morning Paper “There is much we can all learn from this relevant and highly engaging chronicle.” —Biloxi Sun Herald “A must-read for anyone who wants to take an emotional stroll through the rubble of these Gulf Coast fishing communities and learn what happened.” —Apalachicola Times “Should be required reading for anyone living in the path of these terrible storms.” —Moondance.org As the unsettled social and political weather of summer 1969 played itself out amid the heat of antiwar marches and the battle for civil rights, three regions of the rural South were devastated by the horrifying force of Category 5 Hurricane Camille. Camille’s nearly 200 mile per hour winds and 28-foot storm surge swept away thousands of homes and businesses along the Gulf Coast of Louisiana and Mississippi. Twenty-four oceangoing ships sank or were beached; six offshore drilling platforms collapsed; 198 people drowned. Two days later, Camille dropped 108 billion tons of moisture drawn from the Gulf onto the rural communities of Nelson County, Virginia—nearly three feet of rain in 24 hours. Mountainsides were washed away; quiet brooks became raging torrents; homes and whole communities were simply washed off the face of the earth. In this gripping account, Ernest Zebrowski and Judith Howard tell the heroic story of America’s forgotten rural underclass coping with immense adversity and inconceivable tragedy. Category 5 shows, through the riveting stories of Camille’s victims and survivors, the disproportionate impact of natural disasters on the nation’s poorest communities. It is, ultimately, a story of the lessons learned—and, in some cases, tragically unlearned—from that storm: hard lessons that were driven home once again in the awful wake of Hurricane Katrina. Ernest Zebrowski is founder of the doctoral program in science and math education at Southern University, a historically black university in Baton Rouge, Louisiana, and Professor of Physics at Pennsylvania State University’s Pennsylvania College of Technology. His previous books include *Perils of a Restless Planet: Scientific Perspectives on Natural Disasters*. Judith Howard earned her Ph.D. in clinical social work from UCLA, and writes a regular political column for the Ruston, Louisiana, Morning Paper.

Big Weather Mark Svenvold, 2006-05-02 The author profiles real tornadoes and severe weather patterns over six thousand miles of Oklahoma, Kansas, and Nebraska, known as Tornado Alley.
