Storm Data ,1997-03

The Storm Season William Hauptman,1993-11

Wicked Weather Warren Faidley,2018-07-15 For the past 30 years, Warren Faidley has forecast, intercepted, and photographed some of the planet's most extreme weather and natural disasters. As a photojournalist, natural disaster survival expert, and adventurer, his expeditions have covered countless miles. Along the way, he has witnessed both the dark side and breathtaking beauty of Mother Nature's mysterious ways. He has journeyed into the heart of darkness as hurricanes Andrew and Katrina brought rage and ruin to thousands. Tornadoes, firestorms, earthquakes, and lightning bolts are forever recorded by his cameras, but his memories are filled with the human elements of hope and survival. In this book, you'll discover over 150 photographs that chronicle Faidley's quest to find the perfect image in the midst of total chaos and will read about his adventures in the midst of the roar of an EF5 tornado, grapefruit-size hailstones, severe thunder and lightning storms, forest fires, and more.

Scanning the Skies Marlene Bradford,2001 Tornadoes, nature's most violent and unpredictable storms, descend from the clouds nearly one thousand times yearly and have claimed eighteen thousand American lives since 1880. However, the U.S. Weather Bureau--fearing public panic and believing tornadoes were too fleeting for meteorologists to predict--forbade the use of the word tornado in forecasts until 1938. *Scanning the Skies* traces the history of today's tornado warning system, a unique program that integrates federal, state, and local governments, privately controlled broadcast media, and individuals. Bradford examines the ways in which the tornado warning system has grown from meager beginnings into a program that protects millions of Americans each year. Although no tornado forecasting program existed before WWII, the needs of the military prompted the development of a severe weather warning system in tornado prone areas. Bradford traces the post-war creation

of the Air Force centralized tornado forecasting program and its civilian counterpart at the Weather Bureau. Improvements in communication, especially the increasing popularity of television, allowed the Bureau to expand its warning system further. This book highlights the modern tornado watch system and explains how advancements during the latter half of the twentieth-century--such as computerized data collection and processing systems, Doppler radar, state-of-the-art television weather centers, and an extensive public education program--have resulted in the drastic reduction of tornado fatalities.
