*The Keys to Bread and Wine* Abigail Agresta, 2022-07-15 How did medieval people think about the environments in which they lived? In a world shaped by God, how did they treat environments marked by religious difference? *The Keys to Bread and Wine* explores the answers to these questions in Valencia in the later Middle Ages. When Christians conquered the city in 1238, it was already one of the richest agricultural areas in the Mediterranean thanks to a network of irrigation canals constructed under Muslim rule. Despite this constructed environment, drought, flooding, plagues, and other natural disasters continued to confront civic leaders in the later medieval period. Abigail Agresta argues that the city's Christian rulers took a technocratic approach to environmental challenges in the fourteenth century but by the mid-fifteenth century relied increasingly on religious ritual, reflecting a dramatic transformation in the city's religious identity. Using the records of Valencia's municipal council, she traces the council's efforts to expand the region's infrastructure in response to natural disasters, while simultaneously rendering the landscape within the city walls more visibly Christian. This having been achieved, Valencia's leaders began by the mid-fifteenth century to privilege rogations and other ritual responses over infrastructure projects. But these appeals to divine aid were less about desperation than confidence in the city's Christianity. Reversing traditional narratives of technological progress, *The Keys to Bread and Wine* shows how religious concerns shaped the governance of the environment, with far-reaching implications for the environmental and religious history of medieval Iberia.

K. Vogt, 2012-12-06 The processes involved in herpesvirus replication, latency, and oncogenic transformation, have, in general, been rather poorly defined. A primary reason for this is the size and complexity of the herpesvirus genome. Undoubtedly, a better understanding of the functions of the viral genome in infected and transformed cells will be achieved through studies with temperature-sensitive (ts) mutants of herpesviruses since, theoretically, any essential gene function can be affected by mutants of this type. A. The Herpesviruses A consideration of the genetic analysis of members of the herpesvirus group necessitates a description, albeit brief, of the properties of the group and, most importantly, of their genetic material. The herpesviruses comprise a group of relatively large (100-150 nm), enveloped viruses. The envelope surrounds an icosahedral capsid enclosing a core which contains doubleU stranded DNA (ROIZMAN, 1969). The group is thus defined on the basis of a common virion morphology. In addition to a common structure, members of the group share a number of biological properties such as a similar replicative cycle, the ability to cause latent and chronic infections, and the ability to induce antigenic modifications of infected cell membranes. Several herpesU viruses have been associated recently with malignancies in man and animals (KLEIN, 1972). Herpesviruses are ubiquitous and have been described in over 30 different species (HUNT and MELENDEZ, 1969; WILDY, 1971; FARLEY et al., 1972; KAZAMA and SCHORNSTEIN, 1972; NAHMIAS et al., 1972; ROIZMAN et al., 1973). Their widespread occurrence in nature suggests a common ancestor.

**Applying Robust Scale M-Estimators to Compute Credibility Premiums in the Large Claim Case** Annett Keller, 2008 An important branch in insurance mathematics is the pricing of possible large claims that are either the results of many small claims occurring at once or that are caused by single events. A premium calculation principle that emphasises the structure of an insurance portfolio is the so called credibility premium. The credibility premium is a convex combination of the class mean, representing the insurance

portfolio's general behaviour and the individual mean. The latter takes into account the individual claim history of the risks subsumed in the portfolio. The insurer calculating the premium does not necessarily need to know the claim amount distribution, even though she has to make some assumptions. In this thesis an insurance portfolio of  $N$  risks -- then called risk classes -- is considered. It is assumed that each of the risks typically causes a small claim amount during an insurance period. But once in a while, the risks may produce large claim amounts due to a contamination of the small claim amount distribution function. For such models to calculate an insurance premium, the credibility approach can be applied combined with methods from robust statistics. In that case, both the claim amounts and the insurance premiums are separated into ordinary and extreme parts. The premium for the ordinary part is determined by applying the credibility principle. We assume the claim amount distribution function of risk  $i$ ,  $i=1, \dots, N$  to be  $\Gamma(\alpha, \theta_i)$  with risk parameter  $\theta_i$ , being a random variable itself. The distribution function of the independent risk parameters  $\theta_i$  is known. The rare, large claim amounts originate from a contamination of the claim amount distribution function  $\Gamma(\alpha, \theta_i)$ . Thus, we will introduce robust estimators. Determining the premium of the extreme part, the mean excess function is going to be used. After a brief introduction of concepts in robust statistics, such as robust M-estimators and influence functions, we will define two robust scale M-estimators with respect to our data model, both of them depending on parameters  $a$  and  $b$ . We also discuss the question of choosing optimal values for  $a$  and  $b$ . Besides we are going to compute the influence functions, gross errors and finite sample breakdown points for these estimators. It is also proved that the two estimators are asymptotically normally distributed. The thesis is completed by a simulation study. We analyse the sensitivity of the robust scale M-estimators towards different choices of  $a$  and  $b$ , as well as changing sample sizes and possible occurrences of large claims. The simulation will show that for reasonable choices of  $a$  and  $b$ , the robust estimators can bear the comparison with the median, which is known as the most robust estimator. As well, we will estimate the credibility premiums for an insurance portfolio consisting of 25 risk classes and discuss the circumstances, when an actuary should apply the robust credibility approach.

**Handbook of Plant Virus Diseases** Dragoljub D. Susic, Richard E. Ford, Malisa T.

Tosic, 1999-06-15 Handbook of Plant Virus Diseases presents basic information about viral-caused and viral-like diseases in many cultivated crops. The editors, internationally known plant pathologists, provide authoritative descriptive symptomatic signatures of virus diseases, to aid in the diagnosis and possible control of viruses. This handbook organizes cultivated plants into groups according to their final destinations and uses after harvest-a useful grouping system that indicates that some diseases, their resultant epidemiology, and control measures are characteristic within different groups.

**Multiplication of RNA Plant Viruses** Chundi L. Mandahar, 2006-09-05 Biochemical studies on plant virus RNA replication have advanced considerably since 2000, primarily because of new genetic, molecular, biochemical, and enzymatic studies. This book generates understanding of multiplication of plus-sense RNA plant viruses, especially at molecular level. Certain virus-encoded essential proteins, nucleotide sequence motifs, and RNA secondary structures are central to virus RNA replication, which has a number of stages. Each is a complex phenomenon requiring specific factors and conditions.

**CRC Handbook of Viruses Infecting Legumes** John R. Edwardson, Richard G.

Christie, 1991-09-11 This interesting handbook discusses 145 plant viruses in 27 groups and 31 unclassified viruses in naturally infected legumes. The viruses were observed in field infections of 281 species in 64 genera of the Leguminosae. The book presents information regarding resistance sources and resistance-breeding, vectors, seed transmission, and host ranges. Measurements of virus properties are organized in tabular form for particle

dimensions, serological relationships, nucleic acid percentages, sedimentation coefficients of particles and nucleic acids, molecular weights of nucleic acids and coat proteins, optical density, and buoyant density. Handbook of Viruses Infecting Legumes is unique in that it relates inclusion cytology to plant virus detection, identification, and classification. Light and electron micrographs illustrate morphology, location, and staining reactions of inclusions. Of the 27 groups that contain viruses infecting legumes in nature, inclusions are diagnostic at the group level in 15 of these groups. Plant breeders, diagnosticians, plant virologists, and students of plant virology will find this an indispensable guide to legume viruses.

**Encyclopedia of Virology**, 2021-02-24 Encyclopedia of Virology, Fourth Edition, Five Volume Set builds on the solid foundation laid by the previous editions, expanding its reach with new and timely topics. In five volumes, the work provides comprehensive coverage of the whole virosphere, making this a unique resource. Content explores viruses present in the environment and the pathogenic viruses of humans, animals, plants and microorganisms. Key areas and concepts concerning virus classification, structure, epidemiology, pathogenesis, diagnosis, treatment and prevention are discussed, guiding the reader through chapters that are presented at an accessible level, and include further readings for those needing more specific information. More than ever now, with the Covid19 pandemic, we are seeing the huge impact viruses have on our life and society. This encyclopedia is a must-have resource for scientists and practitioners, and a great source of information for the wider public. Offers students and researchers a one-stop shop for information on virology not easily available elsewhere Fills a critical gap of information in a field that has seen significant progress in recent years Authored and edited by recognized experts in the field, with a range of different expertise, thus ensuring a high-quality standard

**DIY Media** Michele Knobel, Colin Lankshear, 2010 Schools remain notorious for co-opting digital technologies to «business as usual» approaches to teaching new literacies. DIY Media addresses this issue head-on, and describes expansive and creative practices of digital literacy that are increasingly influential and popular in contexts beyond the school, and whose educational potential is not yet being tapped to any significant degree in classrooms. This book is very much concerned with engaging students in do-it-yourself digitally mediated meaning-making practices. As such, it is organized around three broad areas of digital media: moving media, still media, and audio media. Specific DIY media practices addressed in the chapters include machinima, anime music videos, digital photography, podcasting, and music remixing. Each chapter opens with an overview of a specific DIY media practice, includes a practical how-to tutorial section, and closes with suggested applications for classroom settings. This collection will appeal not only to educators, but to anyone invested in better understanding - and perhaps participating in - the significant shift towards everyday people producing their own digital media.

**Everyday Life in Fascist Venice, 1929-40** K. Ferris, 2012-05-04 This book explores the day-to-day 'lived experience' of fascism in Venice during the 1930s, charting the attempts of the fascist regime to infiltrate and reshape Venetians' everyday lives and their responses to the intrusions of the fascist state.

**Mechanical Ventilation** Peter J. Papadakos, Peter Papadakos, Burkhard Lachmann, 2007-01-01 One of the key tools in effectively managing critical illness is the use of mechanical ventilator support. This essential text helps you navigate this rapidly evolving technology and understand the latest research and treatment modalities. A deeper understanding of the effects of mechanical ventilation will enable you to optimize patient outcomes while reducing the risk of trauma to the lungs and other organ systems. A physiologically-based approach helps you better understand the impact of mechanical ventilation on cytokine levels, lung physiology, and other organ systems. The latest

guidelines and protocols help you minimize trauma to the lungs and reduce patient length of stay. Expert contributors provide the latest knowledge on all aspects of mechanical ventilation, from basic principles and invasive and non-invasive techniques to patient monitoring and controlling costs in the ICU. Comprehensive coverage of advanced biological therapies helps you master cutting-edge techniques involving surfactant therapy, nitric oxide therapy, and cytokine modulators. Detailed discussions of both neonatal and pediatric ventilator support helps you better meet the unique needs of younger patients.

**Organelle Genetics in Plants** Víctor Quesada, Pedro Robles, 2021-09-02 Chloroplasts in photosynthetic organisms and mitochondria in a vast majority of eukaryotes, contain part of the genetic material of a eukaryotic cell. The organisation and inheritance patterns of this organellar DNA are quite different to that of nuclear DNA. Present-day chloroplast and mitochondrial genomes contain only a few dozen genes. Nevertheless, these organelles harbor several thousand proteins, the vast majority of them encoded by the nucleus. As a result, the expression of nuclear and organelle genomes has to be very precisely coordinated.

**Modified Maxwell Equations in Quantum Electrodynamics** Henning F. Harmuth, Terence William Barrett, Beate Meffert, 2001 Divergencies in quantum field theory referred to as ?infinite zero-point energy? have been a problem for 70 years. Renormalization has always been considered an unsatisfactory remedy. In 1985 it was found that Maxwell's equations generally do not have solutions that satisfy the causality law. An additional term for magnetic dipole currents corrected this shortcoming. Rotating magnetic dipoles produce magnetic dipole currents, just as rotating electric dipoles in a material like barium titanate produce electric dipole currents. Electric dipole currents were always part of Maxwell's equations. This book shows that the correction of Maxwell's equations eliminates the infinite zero-point energy in quantum electrodynamics. In addition, it presents many more new results.

*Linking Science and Technology to Society's Environmental Goals* Policy Division, Policy and Global Affairs, National Research Council, 1996-12-05 Where should the United States focus its long-term efforts to improve the nation's environment? What are the nation's most important environmental issues? What role should science and technology play in addressing these issues? *Linking Science and Technology to Society's Environmental Goals* provides the current thinking and answers to these questions. Based on input from a range of experts and interested individuals, including representatives of industry, government, academia, environmental organizations, and Native American communities, this book urges policymakers to Use social science and risk assessment to guide decisionmaking. Monitor environmental changes in a more thorough, consistent, and coordinated manner. Reduce the adverse impact of chemicals on the environment. Move away from the use of fossil fuels. Adopt an environmental approach to engineering that reduces the use of natural resources. Substantially increase our understanding of the relationship between population and consumption. This book will be of special interest to policymakers in government and industry; environmental scientists, engineers, and advocates; and faculty, students, and researchers.

The narrative of the book is solutions-driven, as experts weigh on specific issues within the context of Africa's natural resource governance and offer appropriate policy recommendations on how to best manage the continent's resources. This is a must-read for government policy makers in industrialized economies and, more importantly, in Africa and emerging economies, as well as for academic researchers working in the field, extractive

companies operating on the continent, extractive industry and trade associations, and multilateral and donor aid institutions.

Principles and Technical Aspects of PCR Amplification Elizabeth van Pelt-Verkuil, Alex van Belkum, John P. Hays, 2008-03-14 Kary Mullis was awarded a Nobel Prize for inventing the PCR technique more than a decade ago in 1993. Since its discovery, multiple adaptations and variations of the standard PCR technique have been described. ### **Retinal Degenerative Diseases XIX** John D. Ash, Eric Pierce, Robert E.

Anderson, Catherine Bowes Rickman, Joe G. Hollyfield, Christian Grimm, 2023-07-13 This book contains the proceedings of the XVIII International Symposium on Retinal Degeneration (RD2018). A majority of those who spoke and presented posters at the meeting contributed to this volume. The blinding diseases of inherited retinal degenerations have no treatments, and age-related macular degeneration has no cures, despite the fact that it is an epidemic among the elderly, with 1 in 3-4 affected by the age of 70. The RD Symposium focused on the exciting new developments aimed at understanding these diseases and providing therapies for them. Since most major scientists in the field of retinal degenerations attend the biennial RD Symposia, they are known by most as the "best" and "most important" meetings in the field. The volume presents representative state-of-the-art research in almost all areas of retinal degenerations, ranging from cytopathologic, physiologic, diagnostic and clinical aspects; animal models; mechanisms of cell death; candidate genes, cloning, mapping and other aspects of molecular genetics; and developing potential therapeutic measures such as gene therapy and neuroprotective agents for potential pharmaceutical therapy. While advances in these areas of retinal degenerations were described, there will be many new topics that either are in their infancy or did not exist at the time of the last RD Symposium. These include the role of inflammation and immunity, as well as other basic mechanisms, in age-related macular degeneration, several new aspects of gene therapy, and revolutionary new imaging and functional testing that will have a huge impact on the diagnosis and following the course of retinal degenerations, as well as to provide new quantitative endpoints for clinical trials. The retina is an approachable part of the central nervous system (CNS), and there is a major interest in

neuroprotective and gene therapy for CNS diseases and neurodegenerations, in general. It should be noted that with successful and exciting initial clinical trials in neuroprotective and gene therapy, including the restoration of sight in blind children, the retinal degeneration therapies are leading the way towards new therapeutic measures for neurodegenerations of the CNS. Many of the successes recently reported in these areas of retinal degeneration sprang from collaborations established at previous RD Symposia, and many of those were reported at the RD2016 meeting and included in the current volume. We anticipate the excitement of those working in the field and those afflicted with retinal degenerations is reflected in the volume.

**Mining Law and Governance in Africa** Victoria R. Nalule, 2023-06-09 This book explores the various issues that characterise the African mining sector, drawing examples from different African countries and regional organisations. Although there is a massive literature on the subject, some issues have been neglected, including the crucial role of digitalisation and technological advancement in resolving the environmental and social challenges faced in Artisanal and Small-Scale Mining (ASM), deep-sea mining, mining contract negotiations and modernising mining laws to reflect the increasing role of critical minerals, to mention but a few. Therefore, the book unpacks the critical issues associated with the mining sector, explicitly reflecting on the practical solutions needed to address the challenges in the African mining sector. This book uniquely analyses and adds flavour to international mining's fundamental concepts by describing a simulated annealing-based approach appropriate for complex mining projects in Africa. Book contributors comprise of academics from different universities including professors, practitioners, government policymakers, NGO executives and a variety of different experts. This multidisciplinary book will be of interest to African policymakers, governments, academics, industry professionals, energy and mining institutions, international organisations, universities across the globe and companies.
